Salesforce Sample Questions (Q30-Q35):

NEW QUESTION # 30

複数通貨が有効になっている組織では、開発者は、ログインしているユーザーが最近アクセスした上位 10 件の商談を表示する **Lightning** コンポーネントを構築するという任務を負っています。開発者は、**Amount** フィールドと **LastModifiedDate** フィールドの値がユーザーのロケールに従って表示されていることを確認する必要があります。

表示される値がユーザーのロケール設定に従っていることを確認するための最も効果的なアプローチは何ですか？

- A. REGEX 式を使用して、SOQL 経由で取得した値を書式設定します。
- **B. SOQL クエリで **FORMAT()** 関数を使用します。**
- C. SOQL クエリで FOR VIEW 句を使用します。
- D. ラッパークラスを使用して、SOQL 経由で取得した値をフォーマットします。

Answer: B

Explanation:

In a multi-currency Salesforce organization, displaying currency amounts according to the user's locale is crucial for ensuring data clarity and relevance. To achieve this, developers can leverage Salesforce's built-in capabilities to format field values directly within SOQL queries. The **FORMAT()** function is particularly useful as it formats currency fields according to the organization's locale settings. By using this function in a SOQL query, developers can ensure that the **Amount** and **LastModifiedDate** fields are displayed correctly.

This method is more effective and efficient than post-processing the values in Apex, which would be required if using wrapper classes or REGEX expressions. Additionally, using the **FOR VIEW** clause in a SOQL query will mark records as recently viewed,

which does not format the fields as per the user's locale.

NEW QUESTION # 34

企業は、エンタープライズ リソース プランニング (ERP) システムで顧客の注文を受け付けます。この注文は、

Account への検索フィールドを持つ order_c レコードとして Salesforce に統合する必要があります。Account オブジェクトには、外部 ID フィールド ENF_Customer_ID__c があります。
正しいアカウントに自動的に関連付けられる新しい Oder_c レコードを作成するには、統合で何を使用する必要がありますか？

- A. 
- B. 
- C. 
- D. 

Answer: A

Explanation:

When integrating external systems with Salesforce and creating records that need to be associated with existing Salesforce records based on an external ID, Salesforce provides the ability to reference an external ID field in a related object directly within a create or update call.

* Option A is correct because the upsert operation can be used to either insert new records or update existing ones. By specifying the external ID field (ENF_Customer_ID__c) for the Account relationship, the system will automatically link the Order__c record to the correct Account based on the external ID provided by the ERP system.

* Options B, C, and D are incorrect because they do not specifically utilize the capability of referencing an external ID to associate records during an integration process.
