SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q53-Q58):

NEW QUESTION # 53
What is a purpose of SAP Datasphere in the context of SAP Business Data Cloud?

- A. To provide analytic models for intelligent applications
- B. To maintain the system landscape for SAP Business Data Cloud
- C. To define a data product
- D. To install an intelligent application

Answer: A

Explanation:
In the context of SAP Business Data Cloud (BDC), SAP Datasphere plays a pivotal role primarily to provide analytic models for intelligent applications. SAP Datasphere acts as the unified data fabric and central data layer within the BDC architecture. It is where data from various sources is integrated, harmonized, and semantically enriched. The analytical models, which are the foundation for reporting, dashboards, and machine learning initiatives within intelligent applications, are built and managed within SAP Datasphere. These models transform raw, integrated data into business-ready information, providing the necessary structure and context for consumption by SAP Analytics Cloud and other intelligent applications. While data products are defined using artifacts within Datasphere, and the overall system landscape is maintained through the BDC Cockpit, the core purpose of Datasphere in this ecosystem is its capability to deliver robust, high-quality analytical models to drive business insights for intelligent applications.

NEW QUESTION # 54
What source system can you connect to with an SAP Analytics Cloud live connection that is provided by SAP BDC?

- A. SAP Datasphere
- B. SAP SuccessFactors
- C. SAP ERP
- D. SAP Business ByDesign Analytics

Answer: A

Explanation:
Within the context of SAP Business Data Cloud (BDC), the primary and most central source system for an SAP Analytics Cloud (SAC) live connection is SAP Datasphere. SAP Datasphere serves as the comprehensive data foundation for SAP's business data fabric, integrating data from various SAP and non-SAP sources, and providing a harmonized, semantically rich data layer. SAP BDC is built upon and extends the capabilities of SAP Datasphere, making it the strategic hub for analytics and data management. Therefore, to ensure data consistency, governance, and real-time access to the integrated and harmonized business data managed within the BDC ecosystem, SAP Datasphere is the recommended and primary live connection source for SAC. While SAC can connect to other SAP systems like S/4HANA or BW, within the specific architecture of SAP BDC, SAP Datasphere plays the pivotal role as the integrated data platform.
