Platform-App-Builder Accurate Test & Platform-App-Builder Passing Score

By focusing on how to help you effectively, we encourage exam candidates to buy our Platform-App-Builder practice test with high passing rate up to 98 to 100 percent all these years. Our Platform-App-Builder exam dumps almost cover everything you need to know about the exam. As long as you practice our Platform-App-Builder test question, you can pass exam quickly and successfully. By using them, you can not only save your time and money, but also pass Platform-App-Builder Practice Exam without any stress. Before you place orders, you can download the free demos of Platform-App-Builder practice test as experimental acquaintance.

Salesforce Platform-App-Builder certification is an essential credential for anyone looking to demonstrate their skills and expertise in building custom applications on the Salesforce platform. With the right preparation and dedication, candidates can pass the exam and take their Salesforce career to the next level.

Salesforce is a leading cloud-based customer relationship management (CRM) software provider that offers various tools and solutions to help businesses manage their customer interactions more effectively. One such tool is the Salesforce Platform-App-Builder Certification, which is designed to help professionals demonstrate their skills and expertise in building custom applications on the Salesforce platform.

Salesforce Certified Platform App Builder Sample Questions (Q106-Q111):

NEW QUESTION # 106

What is a user case for validation rules?

- A. Prevent non-managers from joining a private Chatter Group.
- B. Prevent deals with less than a 10% discount from entering

- C. Restrict partner Lead visibility to the channel sales team.
- D. Ensure Zip/Postal Codes are entered in the correct format.

Answer: B

NEW QUESTION # 107

Universal Containers has two types of applicants, hourly and salary. There are separate record types for each.

While all members of the human resource department need to be able to view all applicant records, only the hiring Manager and VP of HR should be able to create salary applicant records.

What should the app builder recommend to meet this requirement?

- A. Remove "create" permission for the salary applicant object for everyone except the manager and VP.
- B. Update the org-wide default to private and create a sharing rule for the role of recruiting manager.
- C. Configure the hourly record type as the default and instruct non-management users to accept the default record type.
- **D. Create a permission set containing the salary record type and assign it to the appropriate users.**

Answer: D

NEW QUESTION # 108

Northern Trail Outfitters (NTO) has created the custom objects Trail and Park in Salesforce to track trails and parks respectively.

NTO wants to track the total number of trails a park has on the park record without writing any code.

Which two actions should an app builder take to accomplish this requirement?

Choose 2 answers

- A. Use a lookup relationship between the Park and Trail objects.
- B. Use a formula field on the Park record to show the total number of trails.
- **C. Use a master-detail relationship between the Park and Trail objects.**
- **D. Use a roll-up summary field on the Park record to show the total number of Trails.**

Answer: C,D

Explanation:

To track the total number of trails associated with a park without writing code, the correct actions to take are:

Use a roll-up summary field on the Park record to show the total number of Trails (B). Roll-up summary fields calculate and display a value in a master record based on the values of fields in a detail record. They are used to count, sum, average, or get the minimum/maximum of values in related detail records.

Use a master-detail relationship between the Park and Trail objects (C). Master-detail relationships are necessary for roll-up summary fields as they allow the master object to control certain behaviors of the detail object and summarize data from those detail records.

A formula field (A) cannot dynamically count related records unless those records are linked via a master-detail relationship, and it cannot alone handle counts across related records without such a relationship. A lookup relationship (D) does not support roll-up summaries unless combined with additional tools like triggers or third-party apps, which involve coding or extra configuration outside standard object setup.

For more details, refer to the Salesforce Help documentation on master-detail relationships and roll-up summary fields:

Master-Detail Relationship: https://help.salesforce.com/articleView?id=relationships_considerations.htm&type=5 Roll-Up Summary

Fields: https://help.salesforce.com/articleView?id=fields_about_roll_up_summary_fields.htm&type=5

NEW QUESTION # 109

An app Builder creates an Account validation rule on the Industry field that will throw an error if the length of the field is longer than 6 characters. Another App Builder creates a workflow rule with a field update that sets the Industry field to Technology whenever the Billing City field is set to San Francisco. What will happen the next time a sales person saves an Account with a Billing City of San Francisco?

- A. The record will not save and no error message will be displayed
- B. The record will save but the Industry field will not change to Technology
- **C. The record will save and the Industry field will change to Technology**
- D. The record will not save and the validation rule's error message will be displayed

Answer: C

NEW QUESTION # 110

What are two reasons to create an unmanaged package? Choose 2 answers

- **A. Deploying from a Developer Edition environment**
- **B. Distributing open-source projects on the AppExchange.**
- C. Publishing an application for sale on the AppExchange
- D. Distributing upgradeable components to another Salesforce org

Answer: A,B

Explanation:

The two reasons to create an unmanaged package are to distribute open-source projects on the AppExchange and to deploy from a Developer Edition environment. An unmanaged package is a collection of components that can be installed in any Salesforce org but cannot be upgraded or controlled by the developer. An unmanaged package can be used to share open-source projects or to deploy components from a Developer Edition environment to another org.

NEW QUESTION # 111

.....

What do you think of using Pass4sureCert Salesforce Platform-App-Builder Exam Dumps? Pass4sureCert Salesforce Platform-App-Builder certification training dumps, it may be said, is the most excellent reference materials among all exam-related reference materials. Why? There are four reasons in the following. Firstly, Pass4sureCert exam dumps are researched by IT experts who used their experience for years and can figure out accurately the scope of the examinations. Secondly, Pass4sureCert exam dumps conclude all questions that can appear in the real exam. Thirdly, Pass4sureCert exam dumps ensure the candidate will pass their exam at the first attempt. If the candidate fails the exam, Pass4sureCert will give him FULL REFUND. Fourthly, Pass4sureCert exam dumps have two versions: PDF and SOFT version. With the two versions, the candidates can pass their exam with ease.
