**Answer: A,C**

### NEW QUESTION # 153

What is an advantage of using Anypoint Monitoring in cloud deployment scenarios for Mule applications?

- A. It bypasses the need for security monitoring.
- B. Provides detailed insights into application performance and errors.
- C. Automatically fixes any detected errors in the application.
- D. Monitors only the third-party services integrated with the application.

**Answer: B**

### NEW QUESTION # 154

Refer to the exhibit.

□ An organization deploys multiple Mule applications to the same customer-hosted Mule runtime. Many of these Mule applications must expose an HTTPS endpoint on the same port, using a server-side certificate that rotates often. When deploying these Mule applications, what is the most effective way to package the HTTP Listener configuration and package or store the server-side certificate in order to minimize the disruption caused by periodic certificate rotation?

- A. Package the HTTP Listener configuration in a Mule domain project, referencing it from all Mule applications that must expose an HTTPS endpoint.
- B. Package the HTTP Listener configuration in a Mule domain project, referencing it from all Mule applications that must expose an HTTPS endpoint.
- C. Package the HTTP Listener configuration in a Mule domain project, referencing it from all Mule applications that must

expose an HTTPS endpoint.

- D. Package the HTTP Listener configuration in all Mule applications that must expose an HTTPS endpoint.

**Answer: B**

## NEW QUESTION # 155

.....
