C-BCSBS-2502認定内容、C-BCSBS-2502受験資格

ご存知のように、私たちは今、非常に大きな競争圧力に直面しています。欲しいものを手に入れるにはもっと力が必要です。C-BCSBS-2502無料の試験ガイドがこれらを提供するかもしれません。教材を使用すると、SAP Certified Associate認定資格を取得できます。これにより、多くの競合他社の中で、あなたの能力がより明確になります。C-BCSBS-2502練習ファイルを使用することは、ソフトパワーを向上させるための重要なステップです。業界の他の製品と比較して、C-BCSBS-2502学習教材が顧客を引き付けるために必要なものを理解するのに少し時間を割いていただければ幸いです。

SAP C-BCSBS-2502 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">SAP Business Suite ランドスケープの管理と拡張: このセクションでは、SAP Basis 管理者のスキルを評価し、SAP Business Suite 環境の維持と拡張に必要な運用および技術活動を網羅します。受験者は、システムのプロビジョニングとパッチ適用戦略、トランスポート管理、パフォーマンス監視とチューニング、そして拡張パッケージ、アドオンインストール、SAP のクラウドベースの拡張サービスとの統合による機能拡張オプションに関する理解を証明する必要があります。

トピック 2	<ul style="list-style-type: none"> • SAP Business Suiteのポジショニング: この試験セクションでは、SAPソリューションアドバイザーのスキルを評価し、SAP Business Suite、その主要コンポーネント、そして様々な業種における様々なビジネスプロセスのサポート方法についての包括的な理解を問われます。受験者は、財務、物流、人事、分析におけるスイートの機能を明確に説明し、エンドツーエンドの運用における統合パターンを説明し、戦略目標とデジタルトランスフォーメーションロードマップに沿った導入オプションを位置付ける能力を実証する必要があります。
トピック 3	<ul style="list-style-type: none"> • SAP Business Suiteモジュールの設定: このセクションでは、SAP機能コンサルタントのスキルを評価し、SAP Business Suiteのコアモジュールを設定するための基本的な手法を網羅します。受験者は、総勘定元帳、調達、受注管理、人事管理などの分野における基本的なシステム設定、マスターデータと組織構造のカスタマイズ、モジュール間のシームレスなデータフローを確保する主要な統合ポイントの検証方法を理解する必要があります。

SAP Certified Associate - Positioning SAP Business Suite 認定 C-BCSBS-2502 試験問題 (Q18-Q23):

質問 # 18

What is a key advantage of SAP Business Data Cloud Intelligent Applications?

- A. They provide pre-configured dashboards with AI-driven insights for faster decision-making.
- B. They primarily focus on raw data collection with minimal integrated analysis capabilities.
- C. They remove the requirement for formal data governance and compliance policies.

正解: A

解説:

The question asks for a key advantage of SAP Business Data Cloud Intelligent Applications, which are prebuilt, AI-powered applications within SAP Business Data Cloud designed to deliver actionable insights and automate business processes. According to official SAP documentation and the provided search results, the primary advantage is that these applications provide pre-configured dashboards with AI-driven insights for faster decision-making, enabling business users to access ready-to-use analytics with minimal setup. This makes Option A the correct answer.

Explanation of Correct answer:

Option A: They provide pre-configured dashboards with AI-driven insights for faster decision-making.

This is correct because SAP Business Data Cloud Intelligent Applications are designed to deliver pre-configured, SAP-managed dashboards and analytics that leverage AI to provide actionable insights, significantly reducing the time-to-value for business users. These applications combine data from SAP Datasphere and visualization capabilities from SAP Analytics Cloud, infused with AI-driven features like predictive analytics and simulations, to enable agile and informed decision-making. The Describing the Key Capabilities and Benefits of SAP Business Data Cloud lesson on learning.sap.com states:

"New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre-configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions. The intelligent applications enable agile decision-making, predictive analysis, and simulations, leading to better business outcomes." learning.sap.com Additionally, the Intelligent Applications in Business Data Cloud page on www.sap.com elaborates:

"Surface actionable insights and recommendations for analytics and planning with intelligent applications connected directly to your business data. ... These intelligent applications are adaptive, AI-powered applications that learn from your data, understand business context, and act on your behalf to transform business outcomes." sap.com For example, applications like Working Capital Insights or People Intelligence provide prebuilt dashboards that integrate operational and financial data, offering AI-driven recommendations for areas like cash flow optimization or workforce planning. The installation of these applications automates the creation of underlying data models, replication flows, and SAP Analytics Cloud stories, requiring only a few clicks to deploy, as noted in the Managing and Leveraging SAP Business Data Cloud Intelligent Applications lesson:

"From a business user perspective, the result of an installed Intelligent Application is a ready-to-use dashboard. The Intelligent Application is presented to the business user as an SAP Analytics Cloud story which is connected to one or more underlying SAP Datasphere models. The story and all of these connected models are automatically created during the installation of an Intelligent Application." learning.sap.com This pre-configured, AI-driven approach ensures faster decision-making by eliminating the need for extensive manual configuration, making Option A the key advantage.

Explanation of Incorrect Answers:

Option B: They remove the requirement for formal data governance and compliance policies.

This is incorrect because SAP Business Data Cloud Intelligent Applications do not eliminate the need for formal data governance and

compliance policies. In fact, these applications rely on robust governance to ensure data quality, security, and compliance, which are critical for trusted AI and analytics outcomes. The SAP Business Data Cloud overview on www.sap.com emphasizes:

"SAP Business Data Cloud delivers fully managed capabilities for business data fabric, ... ensuring data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." sap.com Furthermore, data products within SAP Business Data Cloud include metadata and governance policies to maintain trust and compliance:

"In SAP BDC, data products are curated, reusable, and business-ready data assets designed to deliver immediate value. They encapsulate not just raw data, but also metadata, business context, and governance policies, making them trusted, actionable tools for analysis, planning, and decision-making." learning.sap.com This indicates that governance and compliance are integral to the platform, not removed, making Option B incorrect.

Option C: They primarily focus on raw data collection with minimal integrated analysis capabilities.

This is incorrect because SAP Business Data Cloud Intelligent Applications are designed to provide advanced analytics and AI-driven insights, not just raw data collection. They integrate data from SAP and non-SAP sources, enrich it with business semantics, and deliver sophisticated analysis through prebuilt dashboards and AI capabilities, as opposed to focusing on raw data. The SAP Business Data Cloud features page on www.sap.com

states:

"Deliver transformational insights for advanced analytics and planning with prebuilt applications and data products across all lines of business. ... Make faster, smarter decisions with prebuilt analytical apps across your enterprise for Core Enterprise Analytics, People Analytics, and more." sap.com The SAP Sapphire Innovation Guide 2025 further highlights:

"Intelligent applications within SAP Business Data Cloud deliver transformational insights across the entire SAP Business Suite, integrating analytics, AI, and simulations into transactional workflows." sap.com This focus on integrated analytics and AI-driven insights directly contradicts Option C, which misrepresents the applications as having minimal analysis capabilities.

Summary:

The key advantage of SAP Business Data Cloud Intelligent Applications is that they provide pre-configured dashboards with AI-driven insights for faster decision-making, as stated in Option A. These applications leverage SAP Analytics Cloud and SAP DataSphere to deliver ready-to-use, context-aware analytics, enabling rapid deployment and agile decision-making. Option B is incorrect because governance and compliance remain essential, and Option C is incorrect because the applications prioritize advanced analytics over raw data collection. This aligns with SAP's strategy to streamline data-to-decision processes within SAP Business Suite, as supported by the provided search results and official documentation.

質問 # 19

Which key features are included in SAP Business Suite for human capital management? There are 2 correct answers to this question.

- A. Customer engagement analytics
- B. Freight and logistics tracking
- C. Employee performance tracking
- D. Payroll and benefits administration

正解: C、D

質問 # 20

What are some components of SAP Business AI?

Note: There are 3 correct answers to this question.

- A. Agility
- B. Enterprise data
- C. Customer centricity
- D. Processes
- E. Technology foundation

正解: B、D、E

解説:

The question asks for the components of SAP Business AI, which is a key pillar of SAP Business Suite that enables intelligent business processes through artificial intelligence. According to official SAP documentation, SAP Business AI is built on three core components: relevant business processes, enterprise data, and a technology foundation. These align with Options A, D, and E, making them the correct answers.

Explanation of Correct Answers:

Option A: Processes

This is correct because SAP Business AI is deeply embedded in business processes to deliver outcome-driven AI capabilities. SAP emphasizes that AI is integrated into end-to-end business processes (e.g., finance, supply chain, procurement) to enhance efficiency, automation, and decision-making. The Positioning SAP Business Suite documentation on learning.sap.com states:

"SAP Business AI is designed to deliver value by embedding AI into relevant business processes. This ensures that AI capabilities are context-aware and drive specific business outcomes, such as optimizing supply chain operations or automating financial reconciliations." For example, SAP Joule, the generative AI copilot, is integrated into processes across SAP S/4HANA Cloud and other SAP applications to provide real-time insights and recommendations. The documentation further notes:

"The process component of SAP Business AI refers to the integration of AI into core business workflows, enabling intelligent automation and process optimization." This confirms that processes are a foundational component of SAP Business AI.

Option D: Enterprise data

This is correct because SAP Business AI relies on enterprise data to train and execute AI models effectively.

SAP emphasizes the importance of harmonized, high-quality data from SAP and third-party sources, managed through solutions like SAP Datasphere, to power AI-driven insights. The documentation states:

"Enterprise data is a critical component of SAP Business AI, providing the foundation for training and deploying AI models. SAP Business AI leverages data from SAP applications, such as SAP S/4HANA, and external sources to deliver accurate and contextually relevant outcomes." For instance, SAP Business AI uses enterprise data to enable predictive analytics, anomaly detection, and personalized recommendations. The integration with SAP Business Data Cloud ensures that data is accessible and governed, supporting AI use cases. The documentation further clarifies:

"SAP Business AI is powered by enterprise data, harmonized through SAP Datasphere, to ensure that AI models are built on a trusted and unified data foundation." This establishes enterprise data as a core component.

Option E: Technology foundation

This is correct because SAP Business AI is underpinned by a robust technology foundation, including the SAP Business Technology Platform (BTP), which provides tools for AI development, deployment, and integration.

This foundation includes AI services, machine learning frameworks, and infrastructure for scalability. The documentation notes:

"The technology foundation of SAP Business AI, built on SAP Business Technology Platform (BTP), provides the infrastructure and tools needed to develop, deploy, and manage AI models. This includes prebuilt AI services, integration capabilities, and support for generative AI." For example, SAP BTP enables the integration of SAP Joule and other AI capabilities into SAP applications, while also supporting custom AI development through tools like the SAP AI Core. The documentation adds:

"SAP Business AI's technology foundation ensures scalability, security, and seamless integration with SAP and non-SAP systems, enabling customers to innovate with AI." This confirms that technology foundation is a key component.

Explanation of Incorrect Answers:

Option B: Agility

This is incorrect because agility is not a component of SAP Business AI. While agility may be an outcome or benefit of using SAP Business AI (e.g., enabling faster decision-making or adaptable processes), it is not a structural component. The documentation does not list agility as part of the core framework of SAP Business AI.

Instead, it focuses on processes, data, and technology:

"SAP Business AI comprises three main components: relevant business processes, enterprise data, and a technology foundation.

These elements work together to deliver intelligent business outcomes." Agility may be associated with the broader value proposition of SAP Business Suite or cloud ERP, but it is not specific to SAP Business AI.

Option C: Customer centricity

This is incorrect because customer centricity is not a component of SAP Business AI. While SAP Business AI can support customer-centric outcomes (e.g., personalized experiences through AI-driven insights), it is not a foundational component. The documentation emphasizes technical and operational components rather than strategic principles like customer centricity:

"SAP Business AI is built on a foundation of processes, data, and technology, enabling intelligent automation and insights across the enterprise." Customer centricity may be a guiding principle in SAP's go-to-market strategy or solution design, but it is not part of the SAP Business AI framework.

Summary:

SAP Business AI is composed of three core components: processes (embedding AI into business workflows), enterprise data (providing the data foundation for AI models), and technology foundation (enabling AI development and deployment via SAP BTP). These correspond to Options A, D, and E. Options B (agility) and C (customer centricity) are incorrect, as they represent outcomes or principles rather than structural components of SAP Business AI. This aligns with SAP's focus on delivering context-aware, data-driven, and technically robust AI capabilities within SAP Business Suite.

質問 # 21

Which SAP module is specifically designed for supplier management and procurement processes? Please choose the correct answer.

- A. SAP Ariba
- B. SAP SuccessFactors
- C. SAP Business Network
- D. SAP Transportation Management

正解: A

質問 # 22

Drag and drop the key terms to the correct position.

正解:

解説:

□ Explanation:

* Largest Circle (Outer Layer):AI (Artificial Intelligence)

* Second Layer (inside AI):Machine Learning

* Third Layer (inside Machine Learning):Deep Learning

* Innermost Layer (inside Deep Learning):Generative AI (Gen AI)

* AI (Artificial Intelligence):The broadest field. Encompasses all intelligent systems that mimic human behavior, decision making, or reasoning.

* Machine Learning:A subset of AI. Uses algorithms to learn patterns from data and make predictions.

* Deep Learning:A subset of Machine Learning. Involves neural networks with many layers (hence "deep"), great for processing images, language, etc.

* Generative AI:A subset of Deep Learning. These models (like GPT, DALL-E, etc.) can generate new content such as text, images, or code.

Visual Placement from Largest to Smallest:

* AI (outermost, encompasses everything)

* Machine Learning (inside AI)

* Deep Learning (inside Machine Learning)

* Generative AI (inside Deep Learning)
