SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q13-Q18):

NEW QUESTION # 13
How can you create a local table with a custom name in SAP Datasphere? Note: There are 2 correct answers to this question.

- A. By creating an intelligent lookup
- B. By creating a persistent snapshot of a view
- C. By importing a CSV file
- D. By adding an output of a data flow

Answer: C,D

Explanation:
In SAP Datasphere, there are several ways to create a local table with a custom name, providing flexibility for data management. Two common methods are by importing a CSV file and by adding an output of a data flow. When you import a CSV file, Datasphere allows you to specify a custom name for the new local table that will store the imported data. This is a quick and straightforward way to bring external, flat-file data into Datasphere. Secondly, a data flow in Datasphere allows you to define a sequence of operations (e.g., transformations, aggregations) and write the processed data to a target. When configuring the output of a data flow, you can specify a new local table and provide it with a custom name. This method is ideal for creating structured tables as a result of complex data integration or transformation processes. These options ensure that users can create and name tables according to their specific data modeling and organizational requirements.

NEW QUESTION # 14
You created a story and want to share it with an external agent, who does not have SAP Analytics Cloud. You decide to export the story as a file. Which file type can be used?

- A. Read/Write
- B. Edit
- C. View

Answer: C

NEW QUESTION # 16
What features does the SAP Analytics Cloud calendar provide?
Please choose the correct answer.
Response:

- A. Create a project plan
- B. Assign Reviewer
- C. Schedule a file
- D. Collaborate

Answer: D

NEW QUESTION # 17
Related to data management, what are some capabilities of SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. Delegate the integration of business data to partners and customers.
- B. Harmonize customer business data across different Line of Business applications
- C. Integrate and enrich customer business data for different analytics use cases.
- D. Store customer business data in 3rd party hyperscaler environments.

Answer: B,C

Explanation:
SAP Business Data Cloud (BDC) offers significant capabilities in data management, primarily focusing on creating a unified and actionable data foundation. Two key capabilities are to integrate and enrich customer business data for different analytics use cases. BDC pulls data from various SAP and non-SAP sources, allowing for consolidation and enhancement of this data to provide a comprehensive view for analytical purposes. This includes applying business context and semantic richness. Secondly, a critical capability is to harmonize customer business data across different Line of Business applications. BDC addresses the challenge of disparate data silos by creating a consistent data model and definitions across various operational systems (e.g., ERP, CRM, HR), ensuring that data is understood and used uniformly across the enterprise. While BDC leverages hyperscaler environments, "storing data" is a characteristic of its infrastructure, not a direct capability of data management provided by BDC itself. Delegating integration is an operational choice, not a core capability of the platform.
