

Valid Saviynt SCAIP free demo & SCAIP pass exam & SCAIP getfreedumps review

Our Saviynt SCAIP exam guide has not equivocal content that may confuse exam candidates. All question points of our Saviynt Certified Advanced IGA Professional (Level 200) SCAIP study quiz can dispel your doubts clearly. Get our Saviynt Certified Advanced IGA Professional (Level 200) SCAIP Certification actual exam and just make sure that you fully understand it and study every single question in it by heart.

Saviynt SCAIP Exam Overview:

Certification Vendor:	Saviynt
Exam Name:	Saviynt Certified Advanced IGA Professional (Level 200)
Exam Number:	SCAIP
Related Certifications:	Saviynt Certified IGA Professional (SCIP)
Passing Score:	70% or 350/500
Exam Duration:	120 minutes
Real Exam Qty:	60
Exam Price:	USD 300
Available Languages:	English
Certificate Validity Period:	2 years
Exam Format:	Multiple Choice, Scenario-based
Recommended Training:	Saviynt Advanced IGA Training
Exam Registration:	Official Registration
Sample Questions:	Saviynt SCAIP Sample Questions
Exam Way:	Online proctored exam
Pre Condition:	Saviynt Certified IGA Professional (SCIP) recommended; 3–6 months hands-on experience with Saviynt IGA; only for Saviynt partners and customers
Official Syllabus URL:	https://saviynt.com/certification-saviynt-certified-advanced-iga-professional

SCAIP Latest Study Notes & SCAIP Valid Test Questions

Improvement in SCAIP science and technology creates unassailable power in the future construction and progress of society. As we can see, the rapid progression of the whole world is pushing people forward and the competitiveness among people who are fighting on the first line is growing intensely. Numerous advantages of SCAIP training materials are well-recognized, such as 99% pass rate in the exam, free trial before purchasing, secure privacy protection and so forth. From the customers' point of view, our SCAIP Test Question put all candidates' demands as the top priority. We treasure every customer' reliance and feedback to the optimal SCAIP practice test.

Saviynt SCAIP Exam Syllabus Topics:

Topic	Details
Topic 1	Analytics: This section focuses on building, configuring, and delivering reports, analytic controls, and dashboards to support data-driven identity governance decisions.
Topic 2	Rules Engineering: This section covers creating and managing automated access policies and rules that handle joiner, mover, and leaver scenarios through technical and user update rules.
Topic 3	Access Reviews: This section covers the configuration and execution of access review campaigns across different reviewer types, along with campaign tracking and post-certification processes.
Topic 4	Segregation of Duties: This section addresses identifying, preventing, and remediating SOD conflicts using rulesets, mitigating controls, and both preventative and detective analysis methods.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q57-Q62):

NEW QUESTION # 57

An EIC Administrator has a requirement to execute provisioning as soon as the user import is completed, what type of job can be configured to achieve this?

- A. WSRetry job
- **B. Trigger chain job**
- C. Single Threaded Job
- D. Multi threading job

Answer: B

Explanation:

In Saviynt EIC, job orchestration and sequencing are critical for automating identity lifecycle processes such as user import followed by provisioning. To ensure that provisioning starts immediately after user import completes, Saviynt provides the concept of a Trigger Chain Job.

A Trigger Chain Job (Option B) allows administrators to define a sequence of jobs where one job is automatically triggered upon the successful completion of another. In this scenario, once the User Import Job finishes, the system can automatically trigger the Provisioning Job, ensuring seamless and immediate execution without manual intervention or time delays.

Option A (Multi-threading job) relates to performance optimization, not sequencing. Option C (Single Threaded Job) defines execution style but does not control job dependency. Option D (WSRetry job) is used for retrying failed web service calls, not for chaining processes.

Thus, Trigger Chain Job is the correct approach for automating dependent job execution and is widely used in Saviynt for efficient workflow orchestration.

NEW QUESTION # 58

Consider that your primary HR data is stored in Workday, and you want to display the full names of the users by combining their first and last names from Workday. The Identity Repository must reflect any changes made to the user data almost in real time. Given the above scenario, how can identity data be transformed or normalized before importing into EIC?

- A. Configure an inline preprocessor with USERUPDATEJSON
- B. Configure an inline preprocessor with MODIFYUSERDATAJSON
- **C. Configure an inline preprocessor with IMPORTUSERJSON**
- D. None of the above

Answer: C

Explanation:

In Saviynt EIC, identity data transformation and normalization during ingestion from authoritative sources like Workday are handled at the import stage, specifically using IMPORTUSERJSON. This JSON configuration governs how user data is fetched, parsed, and

mapped into the Saviynt Identity Repository.

To meet the requirement of combining first name and last name into a full name and ensuring near real-time reflection of updates, an inline preprocessor within IMPORTUSERJSON is used. This allows administrators to apply transformation logic-such as concatenation, formatting, or conditional mapping-directly during the import process before the data is persisted in Saviynt. Option A (USERUPDATEJSON) and B (MODIFYUSERDATAJSON) are used for post-import updates or provisioning-related user modifications, not for initial transformation during ingestion. These do not meet the requirement of transforming data before it is stored in the Identity Repository.

Option D is incorrect because Saviynt explicitly supports inline preprocessors in IMPORTUSERJSON for such use cases.

Thus, configuring an inline preprocessor in IMPORTUSERJSON is the correct and recommended approach for identity data normalization during import.

NEW QUESTION # 59

Which of the following scenarios are True to trigger Technical Rule Execution in EIC? (Multi-Select)

- A. When users are imported through Import Job and the condition in the rule matches
- B. The existing user is updated and satisfies a user update rule with action as Re-run provisioning rules
- C. When a user is deleted and the condition in the rule matches
- D. A new user is registered or created from the UI and the condition in the rule matches

Answer: A,B,D

Explanation:

In Saviynt EIC, Technical Rules are triggered based on lifecycle events related to user creation, updates, and imports, provided the defined conditions evaluate to true. The correct answers are B, C, and D.

Option B is correct because during Import Jobs, when users are brought into Saviynt from authoritative sources, Technical Rules are evaluated, and if conditions match, they are executed. This is a common mechanism for provisioning access during onboarding.

Option C is also correct since when a new user is created via the UI, Technical Rules can be triggered if the user attributes meet the rule conditions. This ensures consistent provisioning regardless of how users are created.

Option D is correct because when an existing user is updated, and a User Update Rule is configured to re-run provisioning rules, it can trigger associated Technical Rules again.

Option A is incorrect because deletion events typically trigger deprovisioning workflows rather than standard Technical Rule execution.

Thus, Technical Rules are triggered during import, creation, and update events-not deletion.

NEW QUESTION # 60

Which capabilities are supported for Active Directory groups through Saviynt group management? (Multi- Select)

- A. Only launch certification campaigns
- B. Create groups
- C. Delete groups
- D. Update groups

Answer: B,C,D

Explanation:

The correct answers are A, B, and C. Saviynt documentation for Active Directory group management states that the connector can be used to create, update, and delete AD or ADSI groups. It also supports related group-management functions such as updating group attributes and maintaining group membership and owners. This confirms that Saviynt group management is not limited to visibility or request tracking; it supports the full operational lifecycle for AD groups when configured correctly.

Saviynt's administrative documentation further explains that group management must be configured to enable users to create and manage groups in Saviynt Identity Cloud. That broader wording aligns with the specific lifecycle operations of create, update, and delete. Option D is incorrect because campaign launching is part of certification governance, not the core capability set of AD group management itself. A campaign may later review group-related access, but group management is fundamentally about administering the group object and its membership lifecycle. For Level 200 preparation, this distinction matters: group management handles the lifecycle of the group object, while campaigns handle review and attestation of access associated with identities, roles, or entitlements.

NEW QUESTION # 61

What are the filters available to view the SOD violations in the SOD Risk Evaluation Job? (Multi-Select)

- A. Users
- B. User Account Evaluation
- C. Security System
- D. Ruleset

Answer: A,C,D

Explanation:

In Saviynt EIC, the SOD (Segregation of Duties) Risk Evaluation Job is used to identify conflicts in user access that violate defined SOD policies. To efficiently analyze and review these violations, Saviynt provides several filtering options.

Users (A) is a valid filter that allows administrators to view SOD violations specific to individual users or a group of users. This is helpful for targeted investigations or audits.

Security System (B) is also a valid filter, enabling administrators to narrow down violations based on specific applications or systems. This is useful when analyzing risks within a particular application landscape.

Ruleset (C) is another important filter, as SOD violations are evaluated based on predefined rule sets.

Administrators can filter results based on specific rulesets to understand which policies are being violated.

Option D (User Account Evaluation) is not a standard filter in the SOD Risk Evaluation Job. It is more related to job execution scope rather than filtering results.

Thus, the correct answers are Users, Security System, and Ruleset, which are the primary filters for analyzing SOD violations.
