Identity-and-Access-Management-Architect Exam is proctored, and candidates must agree to the exam policies and procedures before taking the test.

### Salesforce Certified Identity and Access Management Architect Sample Questions (Q243-Q248):

#### NEW QUESTION # 243

A global company is using the Salesforce Platform as an Identity Provider and needs to integrate a third-party application with its Experience Cloud customer portal.

Which two features should be utilized to provide users with login and identity services for the third-party application? Choose 2 answers

- A. Use a connected app.
- B. Use the App Launcher with single sign-on (SSO).
- C. External a Data source with Named Principal identity type.
- D. Use Delegated Authentication.

**Answer: A,B**

Explanation:

Using the App Launcher with SSO and using a connected app are two features that can be utilized to provide users with login and identity services for the third-party application. The App Launcher allows users to access multiple apps from one location with SSO. The connected app allows users to authorize access to the third-party application using OAuth 2.0. The other options are either not relevant or not applicable for this use case.

References: App Launcher, Connected Apps

#### NEW QUESTION # 244

A company's external application is protected by Salesforce through OAuth. The identity architect for the project needs to limit the level of access to the data of the protected resource in a flexible way.

What should be done to improve security?

- A. Leverage external objects and data classification policies.
- B. Define a permission set that grants access to the app and assign to authorized users.
- C. Select "Admin approved users are pre-authorized" and assign specific profiles.
- D. Create custom scopes and assign to the connected app.

**Answer: D**

#### NEW QUESTION # 245

Containers (UC) has decided to implement a federated single Sign-on solution using a third-party Idp. In reviewing the third-party products, they would like to ensure the product supports the automated provisioning and deprovisioning of users. What are the underlining mechanisms that the UC Architect must ensure are part of the product?

- A. Just-in-Time (JIT) for both Provisioning and Deprovisioning.

- B. SOAP API for provisioning; Just-in-Time (JIT) for Deprovisioning.
- C. Just-In-time (JIT) for Provisioning; SOAP API for Deprovisioning.
- D. Provisioning API for both Provisioning and Deprovisioning.

**Answer: A**

#### NEW QUESTION # 246

Northern Trail Outfitters would like to use a portal built on Salesforce Experience Cloud for customer self-service. Guests of the portal be able to self-register, but be unable to automatically be assigned to a contact record until verified. External Identity licenses have been purchased for the project.

After registered guests complete an onboarding process, a flow will create the appropriate account and contact records for the user. Which three steps should an identity architect follow to implement the outlined requirements?

Choose 3 answers

- A. Customize the self-registration Apex handler to create only the user record.
- B. Set up an external login page and call Salesforce APIs for user creation.
- C. Customize the self-registration Apex handler to temporarily associate the user to a shared single contact record.
- D. Enable "Allow customers and partners to self-register".
- E. Select the "Configurable Self-Reg Page" option under Login & Registration.

**Answer: A,D,E**

#### NEW QUESTION # 247

Universal Containers (UC) has implemented an SP-Initiated SAML flow between an external IDP and Salesforce. A user at UC is attempting to login to Salesforce for the first time and is being prompted for Salesforce credentials instead of being shown the IDP login page. What is the likely cause of the issue?

- A. The "Redirect to identity provider" option has not been selected in the SAML configuration.
- B. The user has not been granted the "Enable single Sign-on" permission.
- C. The user has not configured the Salesforce mobile app to use My Domain for login.
- D. The "Redirect to Identity Provider" option has been selected in the My Domain configuration.

**Answer: C**

Explanation:

B is correct because the user has not configured the Salesforce mobile app to use My Domain for login, which is the likely cause of the issue. The My Domain URL is used to redirect the user to the identity provider's login page and initiate the SP-Initiated SAML flow. If the user does not configure the Salesforce mobile app to use My Domain for login, they will be prompted for Salesforce credentials instead of being shown the IDP login page. A is incorrect because the "Redirect to Identity Provider" option has been selected in the My Domain configuration, which is not the cause of the issue. The "Redirect to Identity Provider" option determines whether users are redirected to the identity provider's login page automatically or after clicking a button. C is incorrect because the "Redirect to Identity Provider" option has not been selected in the SAML configuration, which is not the cause of the issue. The "Redirect to Identity Provider" option determines whether users are redirected to the identity provider's login page automatically or after clicking a button. D is incorrect because the user has been granted the "Enable Single Sign-On" permission, which is not the cause of the issue. The "Enable Single Sign-On" permission allows users to use SSO with connected apps or external systems. Verified References: [My Domain URL], [SP-Initiated SAML Flow], [Redirect to Identity Provider Option], [Enable Single Sign-On Permission]

#### NEW QUESTION # 248

.....
