Pass Guaranteed CCSK - Fantastic Exam Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Training

Just like the old saying goes, there is no royal road to success, and only those who do not dread the fatiguing climb of gaining its

numinous summits. In a similar way, there is no smoothly paved road to the CCSK certification. You have to work on it and get started from now. If you want to gain the related certification, it is very necessary that you are bound to spend some time on carefully preparing for the CCSK Exam, including choosing the convenient and practical study materials, sticking to study and keep an optimistic attitude and so on.

The CCSK exam is a valuable certification for IT professionals who are responsible for securing cloud computing environments. CCSK exam is also useful for business leaders and other stakeholders who need to understand the security implications of cloud computing. By earning the CCSK Certification, candidates demonstrate that they have the knowledge and skills required to design, implement, and manage secure cloud computing environments.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q68-Q73):

NEW QUESTION # 68

What is the primary function of Privileged Identity Management (PIM) and Privileged Access Management (PAM)?

- A. Monitor network traffic and detect intrusions
- B. Encrypt data transmitted over the network
- C. Ensure system uptime and reliability
- **D. Manage the risk of elevated permissions**

Answer: D

Explanation:

The primary function of Privileged Identity Management (PIM) and Privileged Access Management (PAM) is to manage the risk of elevated permissions. These systems are designed to control and monitor access to sensitive resources and actions by users with elevated or privileged access rights, such as administrators. By managing these privileged accounts and ensuring they are granted only when necessary, for the least amount of time, and with appropriate oversight, organizations reduce the risk of misuse or abuse of these powerful permissions.

This helps protect critical systems and sensitive data from being compromised by unauthorized access, which is especially important for maintaining the security of IT environments.

NEW QUESTION # 69

CCM: Cloud Controls Matrix (CCM) is a completely independent cloud assessment toolkit that does not map any existing standards.

- **A. False**
- B. True

Answer: A

NEW QUESTION # 70

Which of the following best describes the shift-left approach in software development?

- A. Emphasizes post-deployment security audits
- **B. Integrates security early in the development process**
- C. Focuses on security only during the testing phase
- D. Relies only on automated security testing tools

Answer: B

Explanation:

The shift-left approach in software development refers to integrating security measures early in the development process, rather than waiting until later stages (such as post-deployment) to address security issues. By shifting security "left" in the software development lifecycle, teams can identify and address potential vulnerabilities and risks early, reducing costs and improving the overall security of the application.

NEW QUESTION # 71

Which document defines the minimum levels of service availability, security, controls, processes, communications & support?

- A. Service Level agreement(SLA)
- B. Standard Operating Procedure(SOP)
- C. Operation level agreement(OLA)
- D. Statement of Applicability (SOA)

Answer: A

Explanation:

SLA is correct answer here. Operational Level Agreements(OLA) refers to agreements that are done between business units within the organisation. Standard Operating procedure(SOP)as the name suggest refers to procedural document to conduct an activity/process. Statement of Applicability(SOA) is also 27001 compliance document which list all the relevant security controls applied to the organisation.

NEW QUESTION # 72

Why is early integration of pre-deployment testing crucial in a cybersecurity project?

- A. It allows skipping final verification tests.
- B. It increases the overall testing time and costs.
- C. It eliminates the need for continuous integration.
- D. It identifies issues before full deployment, saving time and resources.

Answer: D

Explanation:

Integrating testing early helps identify security vulnerabilities and configuration issues before they reach production, reducing remediation costs and time. Reference: [Security Guidance v5, Domain 10 - Application Security]
