Valid Test AZ-700 Experience - AZ-700 Best Vce

ExamDumpsVCE is an invisible asset that can give your advantage and get better life higher than your current situation and help you stand out among the average with the best and most accurate AZ-700 study braindumps. For the great merit of our AZ-700 Exam Guide is too many to count. Our experts have been dedicated in this area for more than ten years on compiling the content of our AZ-700 training guide and keeping updating it to the latest.

Microsoft AZ-700 Exam is a certification exam that is aimed at IT professionals who specialize in designing and implementing Microsoft Azure networking solutions. It is one of the latest exams offered by Microsoft, and it is designed to test the candidate's knowledge in several areas, including network infrastructure, security, connectivity, and routing.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q220-Q225):

NEW QUESTION # 220

You have an Azure subscription that contains the resources shown in the following table.

The IP Addresses settings for Vnet1 are configured as shown in the exhibit.

You need to ensure that you can integrate WebApp1 and Vnet1.

Which three actions should you perform in sequence before you can integrate WebApp1 and Vnet1? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

- 1 - Modify the address space of Vnet1
- 2 - Deploy a VPN gateway
- 3 - Configure a point-to-site (P2S) VPN

NEW QUESTION # 221

Your on-premises network contains a VPN device.

You have an Azure subscription that contains a virtual network and a virtual network gateway.

You need to create a Site-to-Site VPN connection that has a custom cryptographic policy.

How should you complete the PowerShell script? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 222

Hotspot Question

Your on-premises network contains a VPN device.

You have an Azure subscription that contains a virtual network and a virtual network gateway.

You need to create a Site-to-Site VPN connection that has a custom cryptographic policy.

How should you complete the PowerShell script? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: New-AzIpssecPolicy

Box 2: New-AzVirtualNetworkGatewayConnection

<https://learn.microsoft.com/en-us/powershell/module/az.network/new-azvirtualnetworkgatewayconnection?view=azps-9.2.0#example-1>

NEW QUESTION # 223

You have an Azure Front Door instance that provides access to a web app. The web app uses a hostname of www.contoso.com.

You have the routing rules shown in the following table.

Which rule will apply to each incoming request? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/frontdoor/front-door-route-matching>

NEW QUESTION # 224

Task 6

You have two servers that are each hosted by a separate service provider in New York and Germany. The server hosted in New

York is accessible by using a host name of ny.contoso.com. The server hosted in Germany is accessible by using a host name of de.contoso.com.

You need to provide a single host name to access both servers. The solution must ensure that traffic originating from Germany is routed to de.contoso.com. All other traffic must be routed to ny.contoso.com.

Answer:

Explanation:

See the Explanation below for step by step instructions.

Explanation:

To provide a single host name that routes traffic based on the origin, you can use Azure Traffic Manager .

This service allows you to route traffic to different endpoints based on various routing methods, including geographic routing.

- * Navigate to the Azure Portal .
 - * Search for "Traffic Manager profiles" and select it.
 - * Click on "Create" .
 - * Enter the following details :
 - * Name : Enter a name for the Traffic Manager profile (e.g., ContosoTrafficManager) .
 - * Routing method : Select Geographic .
 - * Subscription : Select your subscription.
 - * Resource group : Select an existing resource group or create a new one.
 - * Resource group location : Choose a location (this does not affect the routing).
 - * Click on "Create" .
 - * Navigate to the newly created Traffic Manager profile .
 - * Select "Endpoints" from the left-hand menu.
 - * Click on "Add" to add a new endpoint.
 - * Enter the following details :
 - * Type : Select External endpoint .
 - * Name : Enter a name for the endpoint (e.g., NewYorkEndpoint) .
 - * FQDN : Enter ny.contoso.com .
 - * Geographic region : Select "World" (this will be adjusted later).
 - * Click on "Add" to save the endpoint.
 - * Repeat the process to add the second endpoint:
 - * Type : Select External endpoint .
 - * Name : Enter a name for the endpoint (e.g., GermanyEndpoint) .
 - * FQDN : Enter de.contoso.com .
 - * Geographic region : Select Europe .
 - * Navigate to the Traffic Manager profile .
 - * Select "Configuration" from the left-hand menu.
 - * Under "Geographic routing" , adjust the regions:
 - * For the GermanyEndpoint , ensure that the geographic region is set to Europe .
 - * For the NewYorkEndpoint , ensure that the geographic region is set to World (excluding Europe).
 - * Use a DNS query tool to test the routing.
 - * From a location in Germany , query the Traffic Manager profile's DNS name and ensure it resolves to de.contoso.com .
 - * From a location outside Europe , query the Traffic Manager profile's DNS name and ensure it resolves to ny.contoso.com .
 - * Azure Traffic Manager : This service uses DNS to direct client requests to the most appropriate endpoint based on the routing method you choose. Geographic routing ensures that traffic is directed based on the origin of the request.
 - * Geographic Routing : This method allows you to route traffic based on the geographic location of the DNS query origin, ensuring that users are directed to the nearest or most appropriate endpoint.
- Step-by-Step Solution Step 1: Create a Traffic Manager Profile Step 2: Configure Endpoints Step 3: Adjust Geographic Routing Step 4: Test the Configuration Explanation By following these steps, you can provide a single host name that routes traffic to de.contoso.com for users in Germany and to ny.contoso.com for users from other locations, ensuring efficient and appropriate traffic management.
