

Monitor Your Progress with Development-Lifecycle-and-Deployment-Architect Practice Test Software

Salesforce Development-Lifecycle-and-Deployment-Architect Exam is very popular in IT field. Having Development-Lifecycle-and-Deployment-Architect certificate is the best for those people who want to be promoted and is also a valid selection. And with the aid of Development-Lifecycle-and-Deployment-Architect certification test, you can improve your skills and master some useful techniques in your job so that you can finish your work better and demonstrate your great ability before other people. Only in this way can you get more development opportunities.

Earning the Salesforce Certified Development Lifecycle and Deployment Architect certification is a significant achievement and can open up new career opportunities for developers who want to specialize in Salesforce development. It demonstrates a deep understanding of the platform and the ability to design and implement complex solutions that meet the needs of organizations of all sizes and industries.

Earning the Salesforce Development-Lifecycle-and-Deployment-Architect Certification is an impressive achievement that can open up new career opportunities and demonstrate a commitment to excellence in Salesforce development and deployment. It is also a valuable credential for employers, who can be assured that certified professionals have the skills and expertise needed to design and implement complex Salesforce solutions.

To qualify for this certification, candidates must have several years of experience working as a Salesforce developer or architect. They must also pass the Salesforce Certified Application Architect or Salesforce Certified System Architect certification exams. Once they meet these prerequisites, candidates can take the Salesforce Development-Lifecycle-and-Deployment-Architect Exam, which consists of 60 multiple-choice questions and takes approximately 120 minutes to complete.

Latest Salesforce Certified Development Lifecycle and Deployment Architect dumps pdf & Development-Lifecycle-and-Deployment-Architect examsboost review

Are you worried for passing your Development-Lifecycle-and-Deployment-Architect Exam? You must not be confused about selecting some authentic website as we are offering an authentic PDF Braindumps Development-Lifecycle-and-Deployment-Architect exam questions in pdf and testing engine for your assistance. It is the ultimate solution for your worries. Our designed Development-Lifecycle-and-Deployment-Architect Braindumps are not only authentic but approved by the expert faculty. It offers professional skills, perfection utility and efficiency for beating Development-Lifecycle-and-Deployment-Architect.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q182-Q187):

NEW QUESTION # 182

Universal Containers is in the process of testing their integration between Salesforce and their on-premise ERP systems. The testing team has requested a sandbox with up to 10,000 records in each object to benchmark the integration performance. What is the

fastest approach an Architect should recommend?

- A. Spin off a Developer pro sandbox, migrate the metadata and load the data using data loader.
- B. Spin off a Development sandbox, migrate the metadata and load the data using data loader.
- C. Spin off a full copy sandbox with all the objects that are required for testing the integration.
- **D. Spin off a partial copy sandbox using a sandbox template with all the objects required for testing the integration.**

Answer: D

NEW QUESTION # 183

Universal Containers (UC) deploys major releases on a monthly schedule. In recent months, the team has noticed the deployment time has increased two-fold from 2 hours to 4 hours. The team wants to get back to reasonable deployment times. Which three issues could be affecting their deployment times? Choose 3 ans

- **A. Users are working in the org during deployment locking can affect users and the deployment.**
- **B. The number and complexity of Apex tests will have a large impact on the deployment time.**
- C. The deployments are being scheduled during off peak hours, which is not the best time.
- D. The team is highly constrained with pre-deployment and post-deployment changes.
- **E. Some components profiles, custom junction objects, and fields take longer to process than others.**

Answer: A,B,E

NEW QUESTION # 184

At any given time, Universal Containers has 10 Apex developers building new functionality and fixing bugs. Which branching strategy should an Architect recommend that mitigates the risk of developers overwriting others changes?

- A. Have all developers work in the same branch, continuously testing for regressions
- B. Don't use source control. Rely on Salesforce's built-in conflict detection mechanism
- **C. Have developers work in separate branches and merge their changes in a common branch for testing**
- D. Have all developers build new functionality in new branches, but fix bugs in the HEAD

Answer: C

NEW QUESTION # 185

In the effort of improving the code quality, Universal Containers (UC) has asked a third-party system integrator to perform some independent code reviews. One piece of the feedback is the development team is seemingly not doing enough negative unit testing. Which are three usual symptoms of inadequate negative tests
Choose 3 answers

- **A. An Apex process runs into an un-handled exception when an HTTP callout has an unexpected status code in the response body.**
- B. The delivered user interfaces are regularly not meeting the expectations of the business users.
- C. Developers often have to turn to the debug log for details of the failed Apex executions.
- **D. Developers constantly ask the testers for a screenshot of the error and the exact steps of reproducing the error.**
- **E. When an Apex batch job runs at a scheduled time, an increased number of Apex execution errors occur over all.**

Answer: A,D,E

Explanation:

The usual symptoms of inadequate negative tests are the ones that indicate that the code is not handling the possible errors or exceptions that may occur in different scenarios. For example, when an Apex batch job runs at a scheduled time, an increased number of Apex execution errors occur over all, this means that the code is not handling the possible concurrency issues, governor limits, or data quality issues that may arise when the job runs. Similarly, when an Apex process runs into an un-handled exception when an HTTP callout has an unexpected status code in the response body¹, this means that the code is not handling the possible network issues, authentication issues, or API errors that may occur when making the callout. Another symptom is when developers constantly ask the testers for a screenshot of the error and the exact steps of reproducing the error¹, this means that the code is not logging the error details or providing meaningful error messages to the users. Option A is incorrect because turning to the debug log for details of the failed Apex executions is not a symptom of inadequate negative tests, but a normal practice of debugging the code.

Option E is incorrect because the delivered user interfaces are not meeting the expectations of the business users is not a symptom of inadequate negative tests, but a symptom of poor user interface design or incomplete requirements.

NEW QUESTION # 186

Universal Containers (UC) is looking at implementing a large number of features using an AppExchange product. This product uses Subjects to store and configure important business logic within the application.

Which two options should an architect recommend, as the source of truth for storing this reference data?

Choose 2 answers

- **A. Use a third-party product to manage these records.**
- **B. Store the records in a version control system.**
- C. Attach CSV files to the user stories in a project management system.
- D. Store the records in sandboxes and production.

Answer: A,B

Explanation:

Storing the records in sandboxes and production is not a good practice, as it can lead to data inconsistencies and conflicts. Storing the records in a version control system is a better option, as it allows tracking changes and deploying them to different environments. Using a third-party product to manage these records is also a valid option, as it can provide features such as data backup, restore, and migration.

NEW QUESTION # 187

.....

The PDFBraindumps recognizes that students invest significant time and resources in their Salesforce Certified Development Lifecycle and Deployment Architect (Development-Lifecycle-and-Deployment-Architect) certification preparation. Therefore, the PDFBraindumps is committed to save their money with up to 365 days of free questions updates. The PDFBraindumps regularly updates its practice material to ensure that users have the most up-to-date questions. The PDFBraindumps also offers a money-back guarantee (terms and conditions apply) for those who fail to get success, which demonstrates its commitment to users' success.
