We can promise that you would like to welcome this opportunity to kill two birds with one stone. If you choose our 305-300 Test Questions as your study tool, you will be glad to study for your exam and develop self-discipline, our 305-300 latest question adopt diversified teaching methods, and we can sure that you will have passion to learn by our products. We believe that our products will help you successfully pass your exam and hope you will like our product.

No matter where you are or what you are, 305-300 practice questions promises to never use your information for commercial purposes. If you attach great importance to the protection of personal information and want to choose a very high security product, 305-300 Real Exam is definitely your first choice. And we always have a very high hit rate on the 305-300 study guide by our customers for our high pass rate is high as 98% to 100%.

## 305-300 Exam Bible - Test 305-300 Collection Pdf

305-300 certification exam questions have very high quality services in addition to their high quality and efficiency. If you use 305-300 test prep, you will have a very enjoyable experience while improving your ability. We have always advocated customer first. If you use our 305-300 Learning Materials to achieve your goals, we will be honored. And our 305-300 pdf files give you more efficient learning efficiency and allows you to achieve the best results in a limited time. Our 305-300 pdf files are the best exam tool that you have to choose.

Lpi 305-300 (LPIC-3 Exam 305: Virtualization and Containerization) Certification Exam is an essential certification for IT professionals who work with virtualization and containerization technologies. Passing 305-300 exam certifies the candidate as an LPIC-3 Virtualization and Containerization Specialist, which demonstrates their advanced knowledge and experience in these areas. LPIC-3 Exam 305: Virtualization and Containerization certification can help IT professionals to advance their careers and open up new job opportunities.

## Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q25-Q30):

### NEW QUESTION # 25

Which of the following components are essential in Docker architecture? (Select all that apply)

- A. Docker Client
- B. Docker Compose
- C. Docker Daemon
- D. Docker Registry

**Answer: A,C,D**

Explanation:

Docker architecture consists of several core components that enable container creation and management.

According to Docker documentation, the Docker Client, Docker Daemon, and Docker Registry are essential components.

The Docker Client is the user-facing command-line interface that sends commands to the daemon. The Docker Daemon (dockerd) performs the heavy lifting, such as building images, running containers, and managing networks and storage. The Docker Registry stores container images, enabling image distribution and reuse.

Docker Compose is an optional orchestration tool used to define and run multi-container applications, but it is not an essential architectural component.

Therefore, the correct answers are A, C, and D.

### NEW QUESTION # 26

In the command `vzctl _____ 105 /usr/bin/apt-get install wget`, which subcommand of `vzctl` is missing in order to install `wget` in the OpenVZ container 105?

**Answer:**

Explanation:

`exec`

Explanation:

In OpenVZ virtualization, the `vzctl` command is used to manage containers. According to OpenVZ documentation, the `exec` subcommand is required to execute a command inside a running container.

The correct command syntax is:

```
vzctl exec 105 /usr/bin/apt-get install wget
```

The `exec` subcommand runs the specified command in the context of the container identified by its container ID (CTID), in this case 105. Without `exec`, the command would not be executed inside the container environment.

Therefore, the missing and correct subcommand is `exec`.

### NEW QUESTION # 27

FILL BLANK

Which subcommand of `virsh` opens the XML configuration of a virtual network in an editor in order to make changes to that configuration? (Specify ONLY the subcommand without any parameters.)

**Answer:**

Explanation:

`net-edit`

Explanation:

The subcommand of `virsh` that opens the XML configuration of a virtual network in an editor in order to make changes to that configuration is `net-edit`. This subcommand takes the name or UUID of the network as a parameter and opens the network XML file in the default editor, which is specified by the `$EDITOR` shell variable. The changes made to the network configuration are applied immediately after saving and exiting the editor.

:

1: `net-edit - libvirt`.

### NEW QUESTION # 28

How does Packer interact with system images?

- A. Packer creates an instance based on a source image, prepares the instance through a network connection and bundles the

resulting instance as a new system image.

- B. Packer periodically connects through the network to the Packer daemons of all running Packer images in order to re-apply the whole template to the running instance.
- C. Packer downloads and extracts an image in order to make changes to the image's file system, repack the modified image and upload it again.
- D. Packer has to be installed within the target image and is executed during the image's first boot in order to execute preparation tasks.
- E. Packer installs a client within the image which has to be run periodically via cron in order to retrieve the latest template from the Packer server and apply it locally.

**Answer: A**

Explanation:

Packer is a tool that automates the creation of identical machine images for multiple platforms from a single source configuration. Packer works by creating an instance based on a source image, which is a pre-existing image that serves as a starting point. Packer then connects to the instance through a network connection, such as SSH or WinRM, and runs various commands and scripts to install and configure software within the instance. Packer then shuts down the instance and creates a new system image from it, which can be used to launch new instances. Packer supports many platforms, such as AWS, Azure, VMware, Docker, and others. Packer does not install any software or run any daemon within the target image, nor does it periodically connect to the running instances to re-apply the template. Packer also does not modify the source image directly, but creates a new image from the modified instance. References:

#### NEW QUESTION # 29

Which functionality is provided by Vagrant as well as by Docker? (Choose three.)

- A. Both can download required base images.
- B. Both start system images as containers instead of virtual machines by default.
- C. Both can apply changes to a base image.
- D. Both start system images as virtual machines instead of containers by default.
- E. Both can share directories from the host file system to a guest.

**Answer: A,C,E**

#### NEW QUESTION # 30

.....

With our 305-300 study materials, all your agreeable outcomes are no longer dreams for you. And with the aid of our 305-300 exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our 305-300 learning questions. Come and buy our 305-300 practice engine, you will be confident and satisfied with it and have a brighter future.
