HPE Network Switching Associate Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

A network operator is troubleshooting an application that sends a large amount of data using UDP. Users are complaining that the data is arriving corrupted. The operator states that UDP itself cannot fix this.

Why is this statement correct?

- A. UDP uses the IP protocol's checksum, so it doesn't need its own.
- **B. The UDP checksum is optional for IPv4 and does not provide guaranteed error correction.**
- C. UDP's header is too small to contain a checksum field.
- D. UDP relies on the Application Layer to implement any error checking.

Answer: B

NEW QUESTION # 38

A Security Analyst is hardening a network and wants to implement filtering rules that block specific types of traffic based on the logical addresses of the source and destination. For example, they want to block all traffic from the 10.0.0.0/8 network. At which layer of the OSI model do routers and multi-layer switches make forwarding decisions based on this type of logical addressing? (Choose 2.)

- A. Layer 3 (Network)
- B. Layer 7 (Application)
- C. Layer 2 (Data Link)
- D. Layer 4 (Transport)
- E. This is a function of a firewall, not a specific OSI layer.

Answer: A

NEW QUESTION # 39

A Network Technician is setting up a new campus network. The core switch connects to the internet via a firewall. The core switch also connects to several access layer switches, each supporting multiple user VLANs. What essential Layer 3 configurations must be present on the core switch for a user in any VLAN to be able to access the internet? (Select all that apply.)

- A. A Switched Virtual Interface (SVI) with an IP address for each user VLAN.
- B. An IP address configured on every physical port of the core switch.
- C. A default static route pointing to the firewall.
- D. `ip helper-address` configured on every VLAN interface, pointing to the firewall.
- E. The `ip routing` command must be enabled globally.

Answer: A,C,E

NEW QUESTION # 40

Users report poor performance when uploading files to their document management server in the same subnet. You suspect packet loss is causing the problem. Which tool in HPE Aruba Networking Central can you use to confirm this?

- A. Network Check - Traceroute
- B. Device Check - Cable Test
- C. Network Check - Ping
- D. Commands - show interface error-statistics

Answer: C

Explanation:

Ping can be used to measure packet loss by sending multiple echo requests and analyzing lost responses, which helps confirm whether packet loss is occurring between clients and the server within the same subnet.

NEW QUESTION # 41

A network is configured with two 2930F switches as the aggregation layer. Each 2930F switch has ten connections. The network has twenty 2530 access switches connected to both aggregation switches with 1Gb RJ45. Your task is to replace the aggregation switches with CX 6200 models. In this scenario, which configuration would provide redundancy using two ports on the access switches to the aggregation layer?

- A. Create VSF on the CX 6200 and use stacking with the 2530.
- B. Create a single domain VSF for CX 6200 and 2530.
- C. Create VSF on the CX 6200 and a lag for CX 6200 and 2530.
- D. Create a lag on the 2530 to connect to both CX 6200 switches.

Answer: C

Explanation:

By forming a VSF stack with the two CX 6200 switches, they operate as a single logical switch.

This allows each 2530 access switch to build one LACP LAG using two uplink ports -- one to each CX 6200 member -- while still being treated as a single aggregated connection, providing link and switch redundancy.
