

2026 Trustable EC-COUNCIL Valid 312-38 Guide Files

P.S. Free 2026 EC-COUNCIL 312-38 dumps are available on Google Drive shared by ITCertMagic:
<https://drive.google.com/open?id=1lih47mHGltGasT9dqy3k0RhRe8UR6RtS>

Nowadays in this talented society 312-38 professionals are very popular, but the IEC-COUNCIL area are also very competitive. So many EC-COUNCIL professionals through passing difficult 312-38 Certification exams to stabilize themselves. ITCertMagic is websites specifically provide convenience for candidates participating in the 312-38 certification exams.

EC-Council Certified Network Defender (CND) is a globally recognized certification program designed to validate the skills and knowledge of network administrators, network security professionals, and other IT professionals responsible for network security. EC-Council Certified Network Defender CND certification is awarded by the International Council of Electronic Commerce Consultants (EC-Council), a leading provider of certification programs in the field of cybersecurity. The EC-Council Certified Network Defender (CND) certification program is designed to equip IT professionals with the skills and knowledge required to secure their organization's network infrastructure against a wide range of cyber threats.

EC-COUNCIL 312-38 exam is a comprehensive exam that tests the skills and knowledge of network defenders. 312-38 Exam covers a range of topics, including network security, network protocols, and network defense tools. 312-38 exam is designed to test the skills and knowledge of professionals who want to work in the field of network defense, and it is based on the EC-Council Certified Network Defender (CND) course.

The CND certification exam is divided into various sections, including network security, network defense, and security policies and procedures. 312-38 exam consists of 100 multiple-choice questions and is designed to test the candidate's knowledge of the various topics covered in the certification. 312-38 exam is administered online and can be taken at any time, making it convenient for professionals who are unable to attend traditional classroom training.

Perfect EC-COUNCIL Valid Guide Files – First-grade 312-38 Visual Cert Exam

With our 312-38 study materials, all your agreeable outcomes are no longer dreams for you. And with the aid of our 312-38 exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our 312-38 learning questions. Come and buy our 312-38 practice engine, you will be confident and satisfied with it and have a brighter future.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q671-Q676):

NEW QUESTION # 671

According to standard IoT security practice, IoT Gateway should be connected to a -----

- A. Pouter that is connected to internal servers
- B. Secure router
- **C. Border router**
- D. Router that is connected to other subnets

Answer: C

Explanation:

According to standard IoT security practices, an IoT Gateway should be connected to a border router. This setup is recommended because a border router acts as a gateway between different networks, managing the traffic between these networks and the internet. It provides an additional layer of security, ensuring that the IoT devices and the internal network are protected from external threats. The border router can implement security measures such as firewalls, intrusion detection systems, and data encryption to safeguard the IoT ecosystem.

References: The standard practice of connecting an IoT Gateway to a border router is supported by security guidelines that emphasize the importance of segregating IoT devices from internal networks to prevent potential cyber threats from spreading across networks¹²³.

NEW QUESTION # 672

Which of the following attacks are computer threats that try to exploit computer application vulnerabilities that are unknown to others or undisclosed to the software developer? Each correct answer represents a complete solution. Choose all that apply.

- **A. Zero-day**
- B. Buffer overflow
- C. Spoofing
- **D. Zero-hour**

Answer: A,D

NEW QUESTION # 673

Identify the network topology in which the network devices are connected such that every device has a point-to-point link to all the other devices.

- A. Bus Topology
- B. Hybrid Topology
- **C. Mesh Topology**
- D. Star Topology

Answer: C

Explanation:

The network topology where every device is connected to every other device through a point-to-point link is known as Mesh Topology. In this arrangement, devices have a dedicated link to each other, ensuring a unique path for data to travel between any two devices. This setup enhances the reliability of the network, as there are multiple paths for data transfer, and if one link fails, the system can continue to operate using alternative paths.

Mesh topology is characterized by its robustness and is commonly used in applications where reliability is critical, such as military communications and internet service provider networks.

References: The explanation aligns with the characteristics of Mesh Topology as described in network topology resources, including the detailed descriptions provided by GeeksforGeeks¹ and confirmed by other authoritative sources on network topologies²³. For the most accurate and detailed reference, it is recommended to consult the official documents and study guides from the Certified Network Defender (CND) course by the EC-Council.

NEW QUESTION # 674

Peter, a malicious hacker, obtains e-mail addresses by harvesting them from postings, blogs, DNS listings, and Web pages. He then sends a large number of unsolicited commercial e-mail (UCE) messages to these addresses. Which of the following e-mail crimes is Peter committing?

- A. E-mail spam
- B. E-mail storm
- C. E-mail bombing
- D. E-mail spoofing

Answer: A

Explanation:

Peter is performing spamming activity. Spam is a term that refers to the unsolicited e-mails sent to a large number of e-mail users. The number of such e-mails is increasing day by day, as most companies now prefer to use e-mails for promoting their products. Because of these unsolicited e-mails, legitimate e-mails take a much longer time to deliver to their destination. The attachments sent through spam may also contain viruses. However, spam can be stopped by implementing spam filters on servers and e-mail clients. Answer option C is incorrect. Mail bombing is an attack that is used to overwhelm mail servers and clients by sending a large number of unwanted e-mails. The aim of this type of attack is to completely fill the recipient's hard disk with immense, useless files, causing at best irritation, and at worst total computer failure. E-mail filtering and properly configuring email relay functionality on mail servers can be helpful for protection against this type of attack. Answer option B is incorrect. An e-mail storm is a sudden spike of Reply All messages on an e-mail distribution list, usually caused by a controversial or misdirected message. Such storms start when multiple members of the distribution list reply to the entire list at the same time in response to an instigating message. Other members soon respond, usually adding vitriol to the discussion, asking to be removed from the list, or pleading for the cessation of messages. If enough members reply to these unwanted messages, this triggers a chain reaction of e-mail messages. The sheer load of traffic generated by these storms can render the e-mail servers carrying them inoperative, similar to a DDoS attack. Some e-mail viruses also have the capacity to create e-mail storms, by sending copies of themselves to an infected user's contacts, including distribution lists, infecting the contacts in turn. Answer option D is incorrect. E-mail spoofing is a term used to describe e-mail activity in which the sender address and other parts of the e-mail header are altered to appear as though the e-mail originated from a different source. E-mail spoofing is a technique commonly used for spam e-mail and phishing to hide the origin of an e-mail message. By changing certain properties of the e-mail, such as the From, Return-Path, and Reply-To fields (which can be found in the message header), ill-intentioned users can make the e-mail appear to be from someone other than the actual sender. The result is that, although the e-mail appears to come from the address indicated in the From field, it actually comes from another source.

NEW QUESTION # 675

How is a "risk" represented?

- A. Asset + threat
- B. Motive (goal) + method
- C. Asset + threat + vulnerability
- D. Motive (goal) + method + vulnerability

Answer: C

Explanation:

In cybersecurity, risk is represented by the combination of an asset, a threat, and a vulnerability. This means that for a risk to exist, there must be something of value (an asset) that could be negatively impacted, a potential source of harm (a threat), and a weakness that could be exploited (a vulnerability). The presence of an asset alone does not constitute a risk without the potential for a threat to exploit a vulnerability. Similarly, a threat without the ability to exploit a vulnerability does not pose a risk to an asset. Therefore, the representation of risk encompasses all three elements: the asset that needs protection, the threat that could cause harm, and the vulnerability that could allow the threat to affect the asset.

NEW QUESTION # 676

.....

If you fail in 312-38 exam test with ITCertMagic 312-38 exam dumps, we promise to give you full refund! You only need to scan your 312-38 test score report to us together with your receipt ID. After our confirmation, we will give you full refund in time. Or you can choose to charge another exam Q&AS instead of 312-38 Exam Dumps. Useful EC-COUNCIL certifications exam dumps are assured with us. If our 312-38 exam dumps can't help you pass 312-38 exam, details will be sent before we send the exam to you. We don't waste our customers' time and money! Trusting ITCertMagic is your best choice!
