We've always put quality of our PSE-Strata-Pro-24 study guide on top priority. We don't strongly chase for the number of products we have manufactured. Each PSE-Strata-Pro-24 test engine will go through strict inspection from many aspects such as the operation, compatibility test and so on. Also, we have final random sampling survey before we sale our PSE-Strata-Pro-24 practice material to our customers. The quality inspection process is completely strict. The most professional experts of our company will check the study guide and deal with the wrong parts. What you have bought will totally have no problem. That is why we can survive in the market now. Our company is dedicated to carrying out the best quality PSE-Strata-Pro-24 Test Engine. Any small mistake is intolerant. You can buy our products at ease.

## Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>• Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.</li></ul> |

|         |  |
|---------|--|
| Topic 2 | <ul style="list-style-type: none"> <li>• <b>Deployment and Evaluation:</b> This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.</li> </ul>   |
| Topic 3 | <ul style="list-style-type: none"> <li>• <b>Business Value and Competitive Differentiators:</b> This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.</li> </ul> |
| Topic 4 | <ul style="list-style-type: none"> <li>• <b>Architecture and Planning:</b> This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.</li> </ul>   |

### >> PSE-Strata-Pro-24 Latest Exam Tips <<

## 2026 100% Free PSE-Strata-Pro-24 –High-quality 100% Free Latest Exam Tips | Practice Test PSE-Strata-Pro-24 Pdf

Provided you get the certificate this time with our PSE-Strata-Pro-24 practice materials, you may have striving and excellent friends and promising colleagues just like you. It is also as obvious magnifications of your major ability of profession, so PSE-Strata-Pro-24 practice materials may bring underlying influences with positive effects. The promotion or acceptance will be easy. So it is quite rewarding investment.

## Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q59-Q64):

### NEW QUESTION # 59

Which two files are used to deploy CN-Series firewalls in Kubernetes clusters? (Choose two.)

- **A. PAN-CN-MGMT-CONFIGMAP**
- B. PAN-CNI-MULTUS
- C. PAN-CN-MGMT
- **D. PAN-CN-NGFW-CONFIG**

**Answer: A,D**

Explanation:

CN-Series firewalls are Palo Alto Networks' containerized NGFWs designed for protecting Kubernetes environments. These firewalls provide threat prevention, traffic inspection, and compliance enforcement within containerized workloads. Deploying CN-Series in a Kubernetes cluster requires specific configuration files to set up the management plane and NGFW functionalities.

\* Option A (Correct): PAN-CN-NGFW-CONFIG is required to define the configurations for the NGFW itself. This file contains firewall policies, application configurations, and security profiles needed to secure the Kubernetes environment.

\* Option B (Correct): PAN-CN-MGMT-CONFIGMAP is a ConfigMap file that contains the configuration for the management plane of the CN-Series firewall. It helps set up the connection between the management interface and the NGFW deployed within the Kubernetes cluster.

\* Option C: This option does not represent a valid or required file for deploying CN-Series firewalls. The management configurations are handled via the ConfigMap.

\* Option D: PAN-CNI-MULTUS refers to the Multus CNI plugin for Kubernetes, which is used for enabling multiple network interfaces in pods. While relevant for Kubernetes networking, it is not specific to deploying CN-Series firewalls.

References:

\* CN-Series Deployment Guide: <https://docs.paloaltonetworks.com/cn-series>

\* Kubernetes Integration with CN-Series Firewalls:<https://www.paloaltonetworks.com>

### NEW QUESTION # 60

While a quote is being finalized for a customer that is purchasing multiple PA-5400 series firewalls, the customer specifies the need for protection against zero-day malware attacks.

Which Cloud-Delivered Security Services (CDSS) subscription add-on license should be included in the quote?

- A. App-ID
- **B. Advanced WildFire**
- C. Advanced Threat Prevention
- D. AI Access Security

**Answer: B**

Explanation:

Zero-day malware attacks are sophisticated threats that exploit previously unknown vulnerabilities or malware signatures. To provide protection against such attacks, the appropriate Cloud-Delivered Security Service subscription must be included.

\* Why "Advanced WildFire" (Correct Answer C)? Advanced WildFire is Palo Alto Networks' sandboxing solution that identifies and prevents zero-day malware. It uses machine learning, dynamic analysis, and static analysis to detect unknown malware in real time.

\* Files and executables are analyzed in the cloud-based sandbox, and protections are shared globally within minutes.

\* Advanced WildFire specifically addresses zero-day threats by dynamically analyzing suspicious files and generating new signatures.

\* Why not "AI Access Security" (Option A)? AI Access Security is designed to secure SaaS applications by monitoring and enforcing data protection and compliance. While useful for SaaS security, it does not focus on detecting or preventing zero-day malware.

\* Why not "Advanced Threat Prevention" (Option B)? Advanced Threat Prevention (ATP) focuses on detecting zero-day exploits (e.g., SQL injection, buffer overflows) using inline deep learning but is not specifically designed to analyze and prevent zero-day malware. ATP complements Advanced WildFire, but WildFire is the primary solution for malware detection.

\* Why not "App-ID" (Option D)? App-ID identifies and controls applications on the network. While it improves visibility and security posture, it does not address zero-day malware detection or prevention.

Reference: Palo Alto Networks Advanced WildFire documentation confirms its role in detecting and preventing zero-day malware through advanced analysis techniques.

### NEW QUESTION # 61

There are no Advanced Threat Prevention log events in a company's SIEM instance. However, the systems administrator has confirmed that the Advanced Threat Prevention subscription is licensed and that threat events are visible in the threat logs on the firewall.

Which action should the systems administrator take next?

- A. Enable the company's Threat Prevention license.
- **B. Ensure the Security policy rules that use Advanced Threat Prevention are set for log forwarding to the correct SIEM.**
- C. Check with the SIEM vendor to verify that Advanced Threat Prevention logs are reaching the company's SIEM instance.
- D. Have the SIEM vendor troubleshoot its software.

**Answer: B**

Explanation:

\* Understanding the Problem:

\* The issue is that Advanced Threat Prevention (ATP) logs are visible on the firewall but are not being ingested into the company's SIEM.

\* This implies that the ATP subscription is working and generating logs on the firewall but the logs are not being forwarded properly to the SIEM.

\* Action to Resolve:

\* Log Forwarding Configuration:

\* Verify that the Security policy rules configured to inspect traffic using Advanced Threat Prevention are set to forward logs to the SIEM instance.

\* This is a common oversight. Even if the logs are generated locally, they will not be forwarded unless explicitly configured.

\* Configuration steps to verify in the Palo Alto Networks firewall:

- \* Go to Policies > Security Policies and check the "Log Forwarding" profile applied.
  - \* Ensure the "Log Forwarding" profile includes the correct settings to forward Threat Log to the SIEM.
  - \* Go to Device > Log Settings and ensure the firewall is set to forward Threat logs to the desired Syslog or SIEM destination.
  - \* Why Not the Other Options?
  - \* A (Enable the Threat Prevention license):
  - \* The problem does not relate to the license; the administrator already confirmed the license is active.
  - \* B (Check with the SIEM vendor):
  - \* While verifying SIEM functionality is important, the first step is to ensure the logs are being forwarded correctly from the firewall to the SIEM. This is under the systems administrator's control.
  - \* C (Have the SIEM vendor troubleshoot):
  - \* This step should only be taken after confirming the logs are forwarded properly from the firewall.
- References from Palo Alto Networks Documentation:
- \* Log Forwarding and Security Policy Configuration
  - \* Advanced Threat Prevention Configuration Guide

### NEW QUESTION # 62

Which three tools can a prospective customer use to evaluate Palo Alto Networks products to assess where they will fit in the existing architecture? (Choose three)

- A. Ultimate Test Drive
- B. Security Lifecycle Review (SLR)
- C. Proof of Concept (POC)
- D. Policy Optimizer
- E. Expedition

**Answer: A,B,C**

Explanation:

When evaluating Palo Alto Networks products, prospective customers need tools that can help them assess compatibility, performance, and value within their existing architecture. The following tools are the most relevant:

\* Why "Proof of Concept (POC)" (Correct Answer A)? A Proof of Concept is a hands-on evaluation that allows the customer to deploy and test Palo Alto Networks products directly within their environment. This enables them to assess real-world performance, compatibility, and operational impact.

\* Why "Security Lifecycle Review (SLR)" (Correct Answer C)? An SLR provides a detailed report of a customer's network security posture based on data collected during a short evaluation period. It highlights risks, vulnerabilities, and active threats in the customer's network, demonstrating how Palo Alto Networks solutions can address those risks. SLR is a powerful tool for justifying the value of a product in the customer's architecture.

\* Why "Ultimate Test Drive" (Correct Answer D)? The Ultimate Test Drive is a guided hands-on workshop provided by Palo Alto Networks that allows prospective customers to explore product features and capabilities in a controlled environment. It is ideal for customers who want to evaluate products without deploying them in their production network.

\* Why not "Policy Optimizer" (Option B)? Policy Optimizer is used after a product has been deployed to refine security policies by identifying unused or overly permissive rules. It is not designed for pre-deployment evaluations.

\* Why not "Expedition" (Option E)? Expedition is a migration tool that assists with the conversion of configurations from third-party firewalls or existing Palo Alto Networks firewalls. It is not a tool for evaluating the suitability of products in the customer's architecture.

Reference: Palo Alto Networks SLR documentation and Ultimate Test Drive overview confirm these tools' roles in product evaluation.

### NEW QUESTION # 63

Which two tools should a systems engineer use to showcase the benefit of an evaluation that a customer has just concluded?

- A. Security Lifecycle Review (SLR)
- B. Firewall Sizing Guide
- C. Golden Images
- D. Best Practice Assessment (BPA)

**Answer: A,D**

Explanation:

After a customer has concluded an evaluation of Palo Alto Networks solutions, it is critical to provide a detailed analysis of the results and benefits gained during the evaluation. The following two tools are most appropriate:

\* Why "Best Practice Assessment (BPA)" (Correct Answer A)? The BPA evaluates the customer's firewall configuration against Palo Alto Networks' recommended best practices. It highlights areas where the configuration could be improved to strengthen security posture. This is an excellent tool to showcase how adopting Palo Alto Networks' best practices aligns with industry standards and improves security performance.

\* Why "Security Lifecycle Review (SLR)" (Correct Answer B)? The SLR provides insights into the customer's security environment based on data collected during the evaluation. It identifies vulnerabilities, risks, and malicious activities observed in the network and demonstrates how Palo Alto Networks' solutions can address these issues. SLR reports use clear visuals and metrics, making it easier to showcase the benefits of the evaluation.

\* Why not "Firewall Sizing Guide" (Option C)? The Firewall Sizing Guide is a pre-sales tool used to recommend the appropriate firewall model based on the customer's network size, performance requirements, and other criteria. It is not relevant for showcasing the benefits of an evaluation.

\* Why not "Golden Images" (Option D)? Golden Images refer to pre-configured templates for deploying firewalls in specific use cases. While useful for operational efficiency, they are not tools for demonstrating the outcomes or benefits of a customer evaluation. Reference: Palo Alto Networks documentation for Best Practice Assessment (BPA) and Security Lifecycle Review (SLR) confirms their role in showcasing evaluation benefits.

## NEW QUESTION # 64

.....

We have been focusing on perfecting the PSE-Strata-Pro-24 exam dumps by the efforts of our company's every worker no matter the professional expert or the 24 hours online services. We are so proud that we own the high pass rate to 99%. This data depend on the real number of our worthy customers who bought our PSE-Strata-Pro-24 Study Guide and took part in the real PSE-Strata-Pro-24 exam. Obviously, their performance is wonderful with the help of our outstanding PSE-Strata-Pro-24 learning materials.
