Nutanix NCP-MCI-6.10 Questions - Shortcut To Success 2026

If you have bought the NCP-MCI-6.10 exam questions before, then you will know that we have free demos for you to download before your purchase. Free demos of our NCP-MCI-6.10 study guide are understandable materials as well as the newest information for your practice. Under coordinated synergy of all staff, our NCP-MCI-6.10 Practice Braindumps achieved a higher level of perfection by keeping close attention with the trend of dynamic market.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q109-Q114):

NEW QUESTION # 109

Whichtwo URLs must be accessiblefrom aConnected Site's Controller VMsto allowLife Cycle Manager (LCM) to download software updates?

- A. mynutanix.com
- B. download.nutanix.com
- C. release-api.nutanix.com
- D. portal.nutanix.com

Answer: B,C

Explanation:

LCM (Life Cycle Manager) fetches software updates from Nutanix's repositories, requiring access to specific URLs.

- * Option A (download.nutanix.com) is correct:
- * This domain hosts all software update files for AOS, AHV, and other Nutanix components.
- * Option C (release-api.nutanix.com) is correct:
- * This domain is used for LCM to fetch update metadata and check for new versions.
- * Option B (my.nutanix.com) is incorrect:
- * This domain is used for account management, not LCM updates.
- * Option D (portal.nutanix.com) is incorrect:
- * The Nutanix support portal is not used for automated LCM updates.

NEW QUESTION # 110

An administrator is configuring Protection Policies to replicate VMs to a new Nutanix Cloud Cluster (NC2) connected via the Internet.

To comply with an organizational security policy, data sent via the Internet must be encrypted.

Which feature should be taken into account to be compliant?

- A. Configure Data on a self-encrypting drive.
- **B. Enable Data-in-Transit Encryption.**
- C. Enable Data at Rest Encryption.
- D. Configure VMs to use UEFI secure boot.

Answer: B

Explanation:

Nutanix Protection Policies replicate VM data between clusters using Nutanix's built-in data protection engine. For inter-site or cloud-based replication, Nutanix documentation specifies that replication traffic can be encrypted using the Data-in-Transit Encryption feature. The internal description states:

"Data-in-Transit Encryption secures replication traffic moving between clusters by encrypting data packets before transmission across external or untrusted networks." This is distinct from Data-at-Rest Encryption, which protects stored data on disks but does not secure network traffic. Self-encrypting drives and secure boot only protect the VM locally, not the replication path. Because replication to NC2 travels over the Internet, encryption of the transport channel is mandatory to meet security compliance. Therefore, the required capability is Data-in-Transit Encryption.

NEW QUESTION # 111

The customer expects to maintain a cluster runway of 9 months. The customer doesn't have a budget for 6 months but they want to add new workloads to the existing cluster.

Based on the exhibit, what is required to meet the customer's budgetary timeframe?

- A. Delete workloads running on the cluster.
- B. Add resources to the cluster.
- **C. Postpone the start of new workloads.**
- D. Change the target to 9 months.

Answer: C

NEW QUESTION # 112

Refer to Exhibit

After adding new workloads, why is Overall Runway below 365 days and the scenario still shows the cluster is in good shape?

- A. Because Storage Runway is still good.
- B. Because new workloads are sustainable.
- **C. Because the Target is 1 month.**
- D. Because there are recommended resources.

Answer: C

NEW QUESTION # 113

An administrator started an LCM upgrade of the AHV hosts but realized that the upgrade would exceed the planned maintenance window.

Which feature should be leveraged to prevent additional updates from occurring?

- A. Run the `lcm_task_cleanup.py` script.
- B. Restart Genesis on the cluster to restart the LCM service.
- C. Cancel the LCM tasks via the Ergon command line (`ecli`).
- **D. Use the Stop Update feature in LCM.**

Answer: D

Explanation:

When performing a Life Cycle Manager (LCM) upgrade, the recommended way to stop the process is to use the "Stop Update" feature in LCM (Option D).

* Option A (Cancel via Ergon `ecli`) is not a recommended approach since manually interfering with running tasks can cause inconsistencies.

* Option B (`lcm_task_cleanup.py` script) is used for post-upgrade cleanup but does not stop ongoing updates.

* Option C (Restarting Genesis) does not stop an LCM upgrade and can cause instability.
