There are some prominent features that are making the Microsoft AZ-104 exam dumps the first choice of Microsoft AZ-104 certification exam candidates. The prominent features are real and verified Microsoft Azure Administrator Exam (AZ-104) exam questions, availability of Microsoft Azure Administrator Exam (AZ-104) exam dumps in three different formats, affordable price, 1 year free updated Microsoft AZ-104 exam questions download facility, and 100 percent Microsoft AZ-104 exam passing money back guarantee.

To become a certified Microsoft Azure Administrator, the candidate needs to pass the AZ-104 Certification Exam. AZ-104 exam consists of multiple-choice questions and is intended for IT professionals with at least six months of experience in Azure administration. AZ-104 exam is designed to test the candidate's knowledge of Azure services and their ability to implement them in real-world scenarios.

The Microsoft AZ-104 exam covers a wide range of topics, including Azure infrastructure management, Azure storage solutions, Azure virtual networks, Azure compute, Azure security, and Azure identity management. Candidates are required to have a solid understanding of Azure services and the ability to design, deploy, and manage Azure resources. This includes configuring virtual machines, managing Azure subscriptions and resources, implementing and managing storage solutions, and securing Azure environments.

Latest AZ-104 Guide to Obtain Microsoft Certification

After the user has purchased our AZ-104 learning materials, we will discover in the course of use that our product design is extremely scientific and reasonable. Details determine success or failure, so our every detail is strictly controlled. For example, our learning material's Windows Software page is clearly, our AZ-104 Learning material interface is simple and beautiful. There are no additional ads to disturb the user to use the AZ-104 learning material. Once you have submitted your practice time, AZ-104 learning Material system will automatically complete your operation.

Microsoft Azure is a cloud computing platform that offers a wide variety of services to businesses to help them streamline their operations and reduce costs. The platform is known for its scalability, flexibility, and security. As more businesses move to cloud-based services, the demand for certified Azure professionals is on the rise. The industry-recognized certification for Azure administrators is the Microsoft AZ-104 Exam.

Microsoft Azure Administrator Exam Sample Questions (Q328-Q333):

NEW QUESTION # 328

You sign up for Azure Active Directory (Azure AD) Premium.

You need to add a user named admin1@contoso.com as an administrator on all the computers that will be joined to the Azure AD domain.

What should you configure in Azure AD?

- A. General settings from the Groups blade.
- B. Providers from the MFA Server blade.
- C. Device settings from the Devices blade.
- D. User settings from the Users blade.

Answer: C

Explanation:

When you connect a Windows device with Azure AD using an Azure AD join, Azure AD adds the following security principles to the local administrators group on the device:

- * The Azure AD global administrator role
- * The Azure AD device administrator role
- * The user performing the Azure AD join

In the Azure portal, you can manage the device administrator role on the Devices page. To open the Devices page:

1. Sign in to your Azure portal as a global administrator or device administrator.
2. On the left navbar, click Azure Active Directory.
3. In the Manage section, click Devices.
4. On the Devices page, click Device settings.
5. To modify the device administrator role, configure Additional local administrators on Azure AD joined devices.

NEW QUESTION # 329

Your on-premises network contains an SMB share named Share1.

You have an Azure subscription that contains the following resources:

A web app named webapp1

A virtual network named VNET1

You need to ensure that webapp1 can connect to Share1.

What should you deploy?

- A. an Azure Application Gateway
- B. an Azure Active Directory (Azure AD) Application Proxy
- C. an Azure Virtual Network Gateway

Answer: C

Explanation:

Explanation

A Site-to-Site VPN gateway connection can be used to connect your on-premises network to an Azure virtual network over an

IPsec/IKE (IKEv1 or IKEv2) VPN tunnel. This type of connection requires a VPN device, a VPN gateway, located on-premises that has an externally facing public IP address assigned to it.

A: Application Gateway is for http, https and Websocket - Not SMB

B: Application Proxy is also for accessing web applications on-prem - Not SMB. Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client.

NEW QUESTION # 330

You need to implement Role1.

Which command should you run before you create Role1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
Find-RoleCapability
Get-AzureADDirectoryRole
Get-AzureRmRoleAssignment
Get-AzureRmRoleDefinition
```

```
-Name "Reader" |
```

```
ConvertFrom-Json
ConvertFrom-String
ConvertTo-Json
ConvertTo-Xml
```

Answer:

Explanation:

The screenshot shows the 'Answer Area' with the following content:

```
Find-RoleCapability
Get-AzureADDirectoryRole
Get-AzureRmRoleAssignment
Get-AzureRmRoleDefinition
```

```
-Name "Reader" |
```

```
ConvertFrom-Json
ConvertFrom-String
ConvertTo-Json
ConvertTo-Xml
```

In the screenshot, the following items are highlighted with red boxes:

- Get-AzureRmRoleDefinition
- ConvertTo-Json

NEW QUESTION # 331

You need to recommend an identity solution that meets the technical requirements.

What should you recommend?

- A. cloud-only user accounts
- B. Pass-through Authentication and single sign-on (SSO)
- C. password hash synchronization and single sign-on (SSO)
- D. federated single-on (SSO) and Active Directory Federation Services (AD FS)

Answer: D

Explanation:

Explanation

Active Directory Federation Services is a feature and web service in the Windows Server Operating System that allows sharing of identity information outside a company's network.

Scenario: Technical Requirements include:

Prevent user passwords or hashes of passwords from being stored in Azure.

NEW QUESTION # 332

You have an Azure subscription named Sub1.

You plan to deploy a multi-tiered application that will contain the tiers shown in the following table.

Tier	Accessible from the Internet	Number of virtual machines
Front-end web server	Yes	10
Business logic	No	100
Microsoft SQL Server database	No	5

You need to recommend a networking solution to meet the following requirements:

Ensure that communication between the web servers and the business logic tier spreads equally across the virtual machines.

Protect the web servers from SQL injection attacks.

Which Azure resource should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Ensure that communication between the web servers and the business logic tier spreads equally across the virtual machines:

- an application gateway that uses the Standard tier
- an application gateway that uses the WAF tier
- an internal load balancer
- a network security group (NSG)
- a public load balancer

Protect the web servers from SQL injection attacks:

- an application gateway that uses the Standard tier
- an application gateway that uses the WAF tier
- an internal load balancer
- a network security group (NSG)
- a public load balancer

Answer:

Explanation:

Ensure that communication between the web servers and the business logic tier spreads equally across the virtual machines:

- an application gateway that uses the Standard tier
- an application gateway that uses the WAF tier
- an internal load balancer
- a network security group (NSG)
- a public load balancer

Protect the web servers from SQL injection attacks:

- an application gateway that uses the Standard tier
- an application gateway that uses the WAF tier
- an internal load balancer
- a network security group (NSG)
- a public load balancer
