Advancement in H13-624_V5.5 information and communications technology generates huge potential for moving business and production up the value-chain, and improving the quality of life of citizens. And there is no doubt that you can get all kinds of information in cyber space now, H13-624_V5.5 Latest Torrent is not an exception. I strongly recommend the study materials compiled by our company for you, the advantages of our H13-624_V5.5 exam questions are too many to enumerate; I will just list three of them for your reference.

Huawei HCIP-Storage V5.5 Sample Questions (Q44-Q49):

NEW QUESTION # 44

In the following statement about the features of Huawei SmartQuota, which options are correct to choose ()

- A. You can limit the resource usage of a single directory, user, and user group
- B. SmartQuota supports two storage types: block storage and file storage
- C. The resource usage can be reminded to resource users through alarms and events
- D. The main function of SmartQuota is to facilitate system administrators to manage the storage resources of resource users

Answer: A,B,C,D

NEW QUESTION # 45

The scale-out storage system supports cabinet-level security. That is, N data blocks and M parity blocks are stored in different cabinets. If M nodes or M disks are faulty, the system can still read and write data without service interruption or data loss. If M cabinets are faulty, services may be interrupted.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

The statement describes the reliability mechanism of Huawei's scale-out storage systems, such as the OceanStor Pacific series, which employ cabinet-level security to enhance data availability. According to the

HCIP-Storage V5.5 Training Material (Module 3: Scale-Out Storage Technologies), scale-out storage systems use distributed architectures with N data blocks and M parity blocks stored across different cabinets to ensure redundancy. This design leverages erasure coding (EC) or similar mechanisms to tolerate faults. The material explicitly states: "In a scale-out storage system, N+M redundancy ensures that if up to M nodes or M disks fail, the system can reconstruct data without interruption or loss. However, if M cabinets fail, the system may lose the ability to access sufficient parity or data blocks, potentially interrupting services." This confirms that the system can handle M node or disk failures without issue, but M cabinet failures may disrupt services due to the loss of distributed data or parity blocks. Therefore, the statement is true.

NEW QUESTION # 46

The CSI plug-in auxiliary service provided by the Kubernetes community is implemented based on the CSI specification, Deploy on all K8s nodes, complete volume creation/delete, mapping/unmapping, mounting/unmounting and other operations.

- A. True
- B. False

Answer: A

NEW QUESTION # 47

Which automatic load balancing method does Huawei Oceanstor 9000InfoEqualrser support by default?

- A. Number of connections by node
- B. Round Robin

- C. By node throughput
- D. Answer by node comprehensive load

Answer: B

NEW QUESTION # 48

In the Huawei Oceanstor 9000 software architecture, the distributed object storage layer is built on the basis of the distributed file storage layer.

- A. True
- B. False

Answer: B

NEW QUESTION # 49
