

NCP-MCI-6.5 Valid Braindumps Book - NCP-MCI-6.5 Latest Test Fee

P.S. Free & New NCP-MCI-6.5 dumps are available on Google Drive shared by TrainingDumps: <https://drive.google.com/open?id=1IW311ArH0iNHHR-Vvvv8KyNu6-DfNkuQ>

With their authentic and real NCP-MCI-6.5 exam questions, you can be confident of passing the Nutanix NCP-MCI-6.5 certification exam on the first try. In conclusion, if you want to ace the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) v6.5 exam (NCP-MCI-6.5) certification exam and make a successful career in the Nutanix sector, TrainingDumps is the right choice for you. Their Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) v6.5 exam (NCP-MCI-6.5) practice tests and preparation materials are designed to provide you with the best possible chance of passing the Nutanix NCP-MCI-6.5 exam with flying colors. So, don't wait any longer, start your preparation now with TrainingDumps!

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the NCP-MCI-6.5 exam, our experts keep their eyes focusing on it. And the NCP-MCI-6.5 study tool can provide a good learning platform for users who want to get the test NCP-MCI-6.5 Certification in a short time. If you can choose to trust us, I believe you will have a good experience when you use the Nutanix Certified Professional study guide, and you can pass the exam and get a good grade in the test NCP-MCI-6.5 certification.

Hot NCP-MCI-6.5 Valid Braindumps Book | Efficient NCP-MCI-6.5 Latest Test Fee: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) v6.5 exam 100% Pass

If you have interests with our NCP-MCI-6.5 practice materials, we prefer to tell that we have contacted with many former buyers of our NCP-MCI-6.5 exam questions and they all talked about the importance of effective NCP-MCI-6.5 practice material playing a crucial role in your preparation process. Our practice materials keep exam candidates motivated and efficient with useful content based wholly on the real NCP-MCI-6.5 Guide materials.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) v6.5 exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

An administrator is configuring cross-hypervisor DR from an ESXi cluster to a new AHV cluster. When the administrator migrates a protection domain to the AHV cluster, the VMs fail to boot. What should the administrator do to correct this problem?

- A. Uninstall VMware Tools from the VMs.
- **B. Install Nutanix Guest Tools in the protected VMs.**
- C. Increase the snapshot frequency to more than 6 hours.
- D. Add all VMs into a single consistency group.

Answer: B

NEW QUESTION # 20

Refer to Exhibit:

The screenshot shows the 'Update Source' section in the Nutanix Settings interface. It states 'LCM currently fetches updates from the following source.' Below this, there are two input fields: 'Source' and 'URL'. The 'Source' field is set to 'Nutanix Portal' and the 'URL' field is set to 'Nutanix Portal URL'. There is a checkbox labeled 'Enable HTTPS' which is checked, and a note below it says 'Allow LCM to access Nutanix Portal over HTTPS.'

The Update Source for LCM has been configured as shown in the exhibit. Inventory is failing consistently. What is the likely cause of this issue?

- A. The administrator does not have a valid portal account.
- **B. Port 433 Is blocked by a firewall.**
- C. The license assigned to the cluster has expired.
- D. Port 80 is blocked by a firewall.

Answer: B

Explanation:

<https://hyperhci.com/2019/07/22/nutanix-lcm-upgrade-process-failed-trouble-shooting/>

NEW QUESTION # 21

During an AHV upgrade, an administrator finds that a critical VM was powered off rather than migration to another host. Which scenario explains this behavior?

- A. The VM was on the same host as the acropolis leader.
- B. The VM OS hung during migration.
- **C. The VM was marked as an agent VM.**
- D. NO AHV hosts were able to be scheduled.

Answer: C

Explanation:

An agent VM is a special type of VM that is used for running services or applications that are not affected by high availability (HA) events or host maintenance. An agent VM is never migrated to any other host in the cluster. If an HA event occurs or the host is put in maintenance mode, agent VMs are powered off and are powered on on the same host once that host returns to a normal state.

This behavior is different from regular VMs, which are migrated to another host in the cluster if possible, or restarted on the same host if not possible¹.

Therefore, during an AHV upgrade, an administrator may find that a critical VM was powered off rather than migrated to another host if the VM was marked as an agent VM. This can be done either from the Prism web console by selecting the Use this VM as an agent VM option in the Update VM dialog box, or from the aCLI by using the `vm.create` or `vm.update` commands with the `agent_vm=true` parameter². To avoid this situation, the administrator should ensure that any critical VMs are not marked as agent VMs before starting the AHV upgrade.

NEW QUESTION # 22

The Stargate service becomes unavailable on a single CVM on an AHV node. What is used to maintain I/O operations in the cluster?

- A. Route injection
- B. Hypervisor HA
- C. ha.py
- D. iSCSI redirector

Answer: D

NEW QUESTION # 23

Refer to Exhibit.

FAULT DOMAIN TYPE: HOST	
COMPONENT	FAILURES TOLERABLE
Static Configuration	1
Erasure Code Strip Size	1
Stargate Health	1
Metadata	1
Oplog	1
ZooKeeper	1
Extent Groups	1

An administrator increases the cluster RF to 3. The containers are not modified.

What will the new values in the data resiliency dashboard be for FAILURES TOLERABLE for the Zookeeper and Extent Groups components?

- A. Zookeeper = 2 and Extent Groups = 2
- B. Zookeeper = 2 and Extent Groups = 1
- C. Zookeeper = 1 and Extent Groups = 1
- D. Zookeeper = 1 and Extent Groups = 2

Answer: B

Explanation:

According to the web search results, the cluster redundancy factor (RF) determines how many copies of the cluster metadata and configuration data are stored on different nodes. By default, the cluster RF is 2, which means that there are three copies of the Zookeeper and Cassandra data on the cluster. If the cluster RF is increased to 3, then there will be five copies of the Zookeeper and Cassandra data on the cluster¹². This means that the Zookeeper component can tolerate two failures, as it can still operate with a

quorum of three nodes out of five.

However, the container replication factor (RF) determines how many copies of the VM data and oplog are stored on different nodes. The container RF can be set independently for each container, and it can be different from the cluster RF. For example, a container can have RF 2 even if the cluster has RF 34. In this case, the container will only have two copies of the VM data and oplog on the cluster, regardless of the cluster RF. This means that the Extent Groups component can only tolerate one failure, as it needs at least one copy of the VM data and oplog to be available.

Therefore, if the administrator increases the cluster RF to 3, but does not modify the containers, then the new values in the data resiliency dashboard will be Zookeeper = 2 and Extent Groups = 1.

NEW QUESTION # 24

.....

Our NCP-MCI-6.5 study tools not only provide all candidates with high pass rate NCP-MCI-6.5 study materials, but also provide them with good service. If you have some question or doubt about us or our products, you can contact us to solve it. The thoughtfulness of our NCP-MCI-6.5 study guide services is insuperable. What we do surly contribute to the success of NCP-MCI-6.5 practice materials. Therefore, the NCP-MCI-6.5 practice materials can give users more advantages in the future job search, so that users can stand out in the fierce competition and become the best.
