

Huawei H12-725_V4.0 Dumps Free Download & H12-725_V4.0 Valid Real Exam

BTW, DOWNLOAD part of 2Pass4sure H12-725_V4.0 dumps from Cloud Storage: https://drive.google.com/open?id=1Ql_SglFNLzODsbHSc9B2EQr4vSnUgOkf

The advent of our H12-725_V4.0 exam questions with three versions has helped more than 98 percent of exam candidates get the certificate successfully. They are the PDF version, Software version and the APP online version which are co-related with the customers' requirements. All content of our H12-725_V4.0 Exam Materials are written based on the real exam specially. And H12-725_V4.0 simulating questions are carefully arranged with high efficiency and high quality. Besides, H12-725_V4.0 guide preparations are afforded by our considerate after-sales services.

H12-725_V4.0 exam tests are a high-quality product recognized by hundreds of industry experts. Over the years, H12-725_V4.0 exam questions have helped tens of thousands of candidates successfully pass professional qualification exams, and help them reach the peak of their career. It can be said that H12-725_V4.0 test guide is the key to help you open your dream door. We have enough confidence in our products, so we can give a 100% refund guarantee to our customers. H12-725_V4.0 Exam Questions promise that if you fail to pass the exam successfully after purchasing our product, we are willing to provide you with a 100% full refund.

H12-725_V4.0 Valid Real Exam - H12-725_V4.0 Exam Overviews

I want to share valid H12-725_V4.0 Latest Exam Cram review with you. If you are preparing for this exam, you can purchase our dumps for valid preparing plan. Everyone has potential. Our updated latest valid Huawei H12-725_V4.0 exam cram review covers all exam questions of exam center which guarantee candidates to clear exam successfully and obtain certified certification. Facing pressure examinees should trust themselves, everything will go well.

Huawei HCIP-Security V4.0 Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which of the following is the function of Message 1 and Message 2 during IKEv1 phase-1 negotiation in main mode?

- A. IPsec SA negotiation
- B. Exchange of key-related information (materials used for key generation) using the DH algorithm and generation of keys
- C. Mutual identity authentication
- D. Negotiation of the IKE proposals used between peers

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

- * IKEv1 Phase 1 (Main Mode) consists of six messages:
- * Messages 1 & 2 # Negotiate security proposals(encryption, authentication, and DH group).
- * Messages 3 & 4 # Exchange key-related information.
- * Messages 5 & 6 # Perform mutual authentication.
- * Why is B correct?
- * Messages 1 and 2 negotiate IKE proposals between VPN peers.

HCIP-Security References:

- * Huawei HCIP-Security Guide # IKEv1 Main Mode Negotiation

NEW QUESTION # 48

Which of the following statements is false about health check?

- A. In addition to link connectivity detection, health check can also detect the delay, jitter, and packet loss rate of links in real time.
- **B. The health check function cannot be used together with PBR.**
- C. Firewalls can detect network connectivity in real time based on the health check result.
- D. Health check supports DNS detection protocols.

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

- * Health check ensures network reliability by detecting link failures.
- * Supports multiple protocols: ICMP, TCP, UDP, DNS, and HTTP.
- * Works with PBR (Policy-Based Routing):
- * Health check monitors link status, and if a failure is detected, PBR dynamically switches to an alternate path.
- * Why is C false?
- * Health check CAN be used with PBR to ensure traffic is routed via healthy links.

HCIP-Security References:

- * Huawei HCIP-Security Guide # Health Check Configuration

NEW QUESTION # 49

When an IPsec VPN is established in aggressive mode, AH+ESP can be used to encapsulate packets in NAT traversal scenarios.

- A. TRUE
- **B. FALSE**

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

- * Aggressive mode is a faster IKE Phase 1 negotiation method but does not support NAT traversal (NAT-T) with AH.
- * NAT-T only works with ESP, because:
- * AH includes the original IP header in its integrity check, which breaks when NAT modifies the IP address.
- * ESP works with NAT-T since it does not include the original IP header in its integrity check.
- * Why is this statement false?
- * AH does not support NAT-T, so AH+ESP cannot be used in NAT traversal scenarios.

HCIP-Security References:

- * Huawei HCIP-Security Guide # IPsec VPN NAT Traversal

NEW QUESTION # 50

Which of the following statements is true about the outgoing traffic in the firewall virtual system?

- A. Traffic from the public network interface to the private network interface is limited by the inbound bandwidth.

- B. Traffic from the public network interface to the private network interface is limited by the outbound bandwidth.
- **C. Traffic from the private network interface to the public network interface is limited by the outbound bandwidth.**
- D. Traffic from the private network interface to the public network interface is limited by the inbound bandwidth.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

* Inbound bandwidth= Trafficenteringthe firewall.

* Outbound bandwidth= Trafficleavingthe firewall.

* Correct answer:

* A. Private # Public traffic is controlled by outbound bandwidth.

* Why are the other options incorrect?

* B is incorrect because public # private traffic is controlled by inbound bandwidth, not outbound.

* C is incorrect because inbound bandwidth does not apply to private # public traffic.

* D is incorrect because public # private traffic is controlled by inbound bandwidth.

HCIP-Security References:

* Huawei HCIP-Security Guide # Firewall Virtual System Bandwidth Control

NEW QUESTION # 51

Match the description about virtual systems and VPN instances.

Virtual system		Services and routes can be isolated.
VPN instance		Only route isolation can be implemented.
		VPN instances are automatically generated.
		An instance needs to be manually created.

Answer:

Explanation:

Virtual system	Virtual system	Services and routes can be isolated.
VPN instance	VPN instance	Only route isolation can be implemented.
	VPN instance	VPN instances are automatically generated.
	Virtual system	An instance needs to be manually created.

Explanation:

1. Virtual System # Services and routes can be isolated.

* A virtual system (VS) in Huawei firewalls is a fully isolated security instance within a single physical firewall.

* Each virtual system has separate services, routing tables, policies, and security rules, ensuring full isolation between different users or tenants.

2. VPN Instance # Only route isolation can be implemented.

* A VPN instance (VRF - Virtual Routing and Forwarding) provides route isolation for different customer networks but does not isolate services or security policies.

* This is typically used in MPLS VPN deployments where different customers share the same physical device but need isolated

routing tables.

3. VPN Instance # VPN instances are automatically generated.

* In some MPLS VPN or SDN-managed networks, VPN instances can be automatically created when customer configurations are pushed via controllers.

* Dynamic routing protocols (e.g., BGP/MPLS VPN) can automatically generate VRF instances based on network policies.

4. Virtual System # An instance needs to be manually created.

* Unlike VPN instances, virtual systems must be manually created by an administrator on the firewall.

* Each virtual system functions as a completely independent firewall, requiring manual configuration of interfaces, policies, and routing settings.

NEW QUESTION # 52

.....

The H12-725_V4.0 vce braindumps of our 2Pass4sure contain questions and correct answers and detailed answer explanations and analysis, which apply to any level of candidates. Our IT experts have studied Huawei real exam for long time and created professional study guide. So you will pass the test with high rate. If you practice the H12-725_V4.0 Dumps latest seriously and skillfully.
