Pass Guaranteed Google - Professional-Cloud-Developer - The Best New Google Certified Professional - Cloud Developer Test Answers

For candidates who are going to attend the exam, some practice is necessary, for the practice can build up the confidence. Professional-Cloud-Developer exam torrent of us can help you pass the exam successfully. Professional-Cloud-Developer exam braindumps are edited by professional experts, and the quality can be guaranteed. In addition, Professional-Cloud-Developer exam materials cover most knowledge points for the exam, and you can master the major knowledge points for the exam, therefore your confidence for the exam will be strengthened. We provide you with free demo for you to have a try before buying Professional-

Cloud-Developer Exam Braindumps, so that you can know what the complete version is like.

Google Certified Professional - Cloud Developer Sample Questions (Q128-Q133):

NEW QUESTION # 128

Case Study

Company Overview

HipLocal is a community application designed to facilitate communication between people in close proximity. It is used for event planning and organizing sporting events, and for businesses to connect with their local communities. HipLocal launched recently in a few neighborhoods in Dallas and is rapidly growing into a global phenomenon. Its unique style of hyper-local community communication and business outreach is in demand around the world.

Executive Statement

We are the number one local community app; it's time to take our local community services global. Our venture capital investors want to see rapid growth and the same great experience for new local and virtual communities that come online, whether their members are 10 or 10000 miles away from each other.

Solution Concept

HipLocal wants to expand their existing service, with updated functionality, in new regions to better serve their global customers. They want to hire and train a new team to support these regions in their time zones. They will need to ensure that the application scales smoothly and provides clear uptime data.

Existing Technical Environment

HipLocal's environment is a mix of on-premises hardware and infrastructure running in Google Cloud Platform.

The HipLocal team understands their application well, but has limited experience in global scale applications.

Their existing technical environment is as follows:

- * Existing APIs run on Compute Engine virtual machine instances hosted in GCP.
- * State is stored in a single instance MySQL database in GCP.
- * Data is exported to an on-premises Teradata/Vertica data warehouse.
- * Data analytics is performed in an on-premises Hadoop environment.
- * The application has no logging.
- * There are basic indicators of uptime; alerts are frequently fired when the APIs are unresponsive.

Business Requirements

HipLocal's investors want to expand their footprint and support the increase in demand they are seeing. Their requirements are:

- * Expand availability of the application to new regions.
- * Increase the number of concurrent users that can be supported.
- * Ensure a consistent experience for users when they travel to different regions.
- * Obtain user activity metrics to better understand how to monetize their product.
- * Ensure compliance with regulations in the new regions (for example, GDPR).
- * Reduce infrastructure management time and cost.
- * Adopt the Google-recommended practices for cloud computing.

Technical Requirements

- * The application and backend must provide usage metrics and monitoring.
- * APIs require strong authentication and authorization.
- * Logging must be increased, and data should be stored in a cloud analytics platform.
- * Move to serverless architecture to facilitate elastic scaling.
- * Provide authorized access to internal apps in a secure manner.

HipLocal's APIs are showing occasional failures, but they cannot find a pattern. They want to collect some metrics to help them troubleshoot.

What should they do?

- **A. Install the Stackdriver Monitoring agent on the VMs.**
- B. Take frequent snapshots of all of the VMs.
- C. Install the Stackdriver Logging agent on the VMs.
- D. Use Stackdriver Trace to look for performance bottlenecks.

Answer: A

NEW QUESTION # 129

You migrated your applications to Google Cloud Platform and kept your existing monitoring platform. You now find that your notification system is too slow for time critical problems.

What should you do?

- A. Migrate some traffic back to your old platform and perform AB testing on the two platforms concurrently.
- B. Use Stackdriver to capture and alert on logs, then ship them to your existing platform.
- C. Replace your entire monitoring platform with Stackdriver.
- **D. Install the Stackdriver agents on your Compute Engine instances.**

Answer: D

Explanation:

Reference: <https://cloud.google.com/monitoring/>

NEW QUESTION # 130

You are developing a corporate tool on Compute Engine for the finance department, which needs to authenticate users and verify that they are in the finance department. All company employees use G Suite.

What should you do?

- A. Configure Cloud Armor Security Policies to restrict access to only corporate IP address ranges. Issue client side certificates to everybody in the finance team and verify the certificates in the application.
- B. Configure Cloud Armor Security Policies to restrict access to only corporate IP address ranges. Verify the provided JSON Web Token within the application.
- **C. Enable Cloud Identity-Aware Proxy on the HTTP(s) load balancer and restrict access to a Google Group containing users in the finance department. Verify the provided JSON Web Token within the application.**
- D. Enable Cloud Identity-Aware Proxy on the HTTP(s) load balancer and restrict access to a Google Group containing users in the finance department. Issue client-side certificates to everybody in the finance team and verify the certificates in the application.

Answer: C

Explanation:

Explanation

https://cloud.google.com/iap/docs/signed-headers-howto#securing_iap_headers

(<https://cloud.google.com/endpoints/docs/openapi/authenticating-users-google-id>).

<https://cloud.google.com/armor/docs/security-policy-overview#:~:text=Google%20Cloud%20Armor%20security>

"Google Cloud Armor security policies protect your application by providing Layer 7 filtering and by scrubbing incoming requests for common web attacks or other Layer 7 attributes to potentially block traffic before it reaches your load balanced backend services or backend buckets"

NEW QUESTION # 131

You are preparing to conduct a load test on your Cloud Run service by using JMeter. You need to orchestrate the steps and services to use for an effective load test and analysis. You want to follow Google-recommended practices. What should you do?

- **A. Set up a Compute Engine instance, install JMeter on the instance, create a log sink to BigQuery, and use Looker Studio to analyze the results.**
- B. Install JMeter on your local machine, create a log sink to BigQuery, and use Looker to analyze the results.
- C. Set up a Compute Engine instance, install JMeter on the instance, create a log sink to a Cloud Storage bucket, and use Looker Studio to analyze the results.
- D. Set up a Compute Engine instance, install JMeter on the instance, create a log sink to a Cloud Storage bucket, and use Looker to analyze the results.

Answer: A

Explanation:

<https://cloud.google.com/run/docs/about-load-testing>

NEW QUESTION # 132

Your team develops stateless services that run on Google Kubernetes Engine (GKE). You need to deploy a new service that will only be accessed by other services running in the GKE cluster.

The service will need to scale as quickly as possible to respond to changing load. What should you do?

- A. Use a Horizontal Pod Autoscaler to scale the containers, and expose them via a NodePort Service.
- B. Use a Vertical Pod Autoscaler to scale the containers, and expose them via a NodePort Service.
- **C. Use a Horizontal Pod Autoscaler to scale the containers, and expose them via a ClusterIP Service.**
- D. Use a Vertical Pod Autoscaler to scale the containers, and expose them via a ClusterIP Service.

Answer: C

Explanation:

https://cloud.google.com/kubernetes-engine/docs/concepts/service#services_of_type_clusterip When you create a Service of type ClusterIP, Kubernetes creates a stable IP address that is accessible from nodes in the cluster.

<https://cloud.google.com/kubernetes-engine/docs/concepts/horizontalpodautoscaler> The Horizontal Pod Autoscaler changes the shape of your Kubernetes workload by automatically increasing or decreasing the number of Pods in response to the workload's CPU or memory consumption, or in response to custom metrics reported from within Kubernetes or external metrics from sources outside of your cluster.

NEW QUESTION # 133

.....

Our experts have experience of the exam for over ten years. So our Professional-Cloud-Developer practice materials are their masterpiece full of professional knowledge and sophistication to cope with the Professional-Cloud-Developer exam. They have sublime devotion to their career just like you, and make progress ceaselessly. By keeping close eyes on the current changes in this field, they make new updates of Professional-Cloud-Developer Study Guide constantly and when there is any new, we will keep you noticed to offer help more carefully.
