

# Pass Guaranteed 2026 Unparalleled SPLK-2002: Splunk Enterprise Certified Architect Test Guide Online

2026 Latest Pass4SureQuiz SPLK-2002 PDF Dumps and SPLK-2002 Exam Engine Free Share: [https://drive.google.com/open?id=1Ty3bDic6SaqebmZ-K\\_h0Yj-Kgbrzibhr](https://drive.google.com/open?id=1Ty3bDic6SaqebmZ-K_h0Yj-Kgbrzibhr)

It is well known that even the best people fail sometimes, not to mention the ordinary people. In face of the SPLK-2002 exam, everyone stands on the same starting line, and those who are not excellent enough must do more. Every year there are a large number of people who can't pass smoothly. If you happen to be one of them, our SPLK-2002 Learning Materials will greatly reduce your burden and improve your possibility of passing the exam. Our advantages of time-saving and efficient can make you no longer be afraid of the SPLK-2002 exam, and I'll tell you more about its benefits next.

Splunk SPLK-2002: Splunk Enterprise Certified Architect exam is a challenging and prestigious certification that validates the skills required to design and implement Splunk environments in complex organizations. Candidates with a minimum of three years of experience working with Splunk Enterprise and a deep understanding of Splunk architecture and best practices are encouraged to take SPLK-2002 Exam. Passing SPLK-2002 exam demonstrates a high level of expertise in the Splunk platform and can lead to career advancement and new job opportunities.

## Latest Braindumps SPLK-2002 Book & SPLK-2002 Demo Test

The SPLK-2002 certification lead you to numerous opportunities in career development and shaping your future. Just imagine that with the SPLK-2002 certification, you can get a higher salary and a better position to help you lead a totally different and successful life. And with our SPLK-2002 Exam Braindumps, it is easy to pass the exam and get the SPLK-2002 certification. According to our data, our pass rate is high as 98% to 100%. You can pass the exam just by your first attempt.

Splunk SPLK-2002 Exam is designed for experienced professionals who are seeking to demonstrate their proficiency in designing and deploying Splunk Enterprise solutions. SPLK-2002 exam is intended for individuals who are responsible for managing, configuring, and optimizing Splunk deployments in large and complex environments. Splunk Enterprise Certified Architect certification validates the skills and knowledge required to design and architect Splunk solutions that meet the performance, scalability, and reliability requirements of enterprise customers.

## Splunk Enterprise Certified Architect Sample Questions (Q170-Q175):

### NEW QUESTION # 170

When should multiple search pipelines be enabled?

- A. Only if running Splunk Enterprise version 6.6 or later.
- B. Only if disk IOPS is at 800 or better.
- C. Only if there are fewer than twelve concurrent users.
- D. Only if CPU and memory resources are significantly under-utilized.

**Answer: D**

### NEW QUESTION # 171

Which of the following security options must be explicitly configured (i.e. which options are not enabled by default)?

- A. Certificate authentication between Splunk Web and search head.
- B. Data encryption for distributed search between search heads and indexers.
- C. Data encryption between Splunk Web and splunkd.
- D. **Certificate authentication between forwarders and indexers.**

**Answer: D**

Explanation:

Explanation

The following security option must be explicitly configured, as it is not enabled by default:

\* Certificate authentication between forwarders and indexers. This option allows the forwarders and indexers to verify each other's identity using SSL certificates, which prevents unauthorized data transmission or spoofing attacks. This option is not enabled by default, as it requires the administrator to generate and distribute the certificates for the forwarders and indexers. For more information, see

[Secure the communication between forwarders and indexers] in the Splunk documentation. The following security options are enabled by default:

\* Data encryption between Splunk Web and splunkd. This option encrypts the communication between the Splunk Web interface and the splunkd daemon using SSL, which prevents data interception or tampering. This option is enabled by default, as Splunk provides a self-signed certificate for this purpose. For more information, see [About securing Splunk Enterprise with SSL] in the Splunk documentation.

\* Certificate authentication between Splunk Web and search head. This option allows the Splunk Web interface and the search head to verify each other's identity using SSL certificates, which prevents unauthorized access or spoofing attacks. This option is enabled by default, as Splunk provides a self-signed certificate for this purpose. For more information, see [About securing Splunk Enterprise with SSL] in the Splunk documentation.

\* Data encryption for distributed search between search heads and indexers. This option encrypts the communication between the search heads and the indexers using SSL, which prevents data interception or tampering. This option is enabled by default, as Splunk provides a self-signed certificate for this purpose. For more information, see [Secure your distributed search environment] in the Splunk documentation.

### NEW QUESTION # 172

When using the props.conf LINE\_BREAKER attribute to delimit multi-line events, the SHOULD\_LINEMERGE attribute should be set to what?

- A. Auto
- **B. True**
- C. False
- D. None

**Answer: B**

### NEW QUESTION # 173

A customer plans to ingest 600 GB of data per day into Splunk. They will have six concurrent users, and they also want high data availability and high search performance. The customer is concerned about cost and wants to spend the minimum amount on the hardware for Splunk. How many indexers are recommended for this deployment?

- A. Two indexers not in a cluster, assuming users run many long searches.
- B. Two indexers clustered, assuming a high volume of saved/scheduled searches.
- **C. Two indexers clustered, assuming high availability is the greatest priority.**
- D. Three indexers not in a cluster, assuming a long data retention period.

**Answer: C**

Explanation:

Explanation

### NEW QUESTION # 174

Buttercup Games has a multi-site indexer cluster. Site 1, which hosts the Cluster Manager, experiences a DNS failure. Site 2 is unable to reach Site 1. What happens to searching at Site 2?

- A. The search heads search data on Site 1 and Site 2.
- B. The cluster stops responding to all searches.
- C. The search heads start locally indexing the data.
- D. The cluster continues to function and can still respond to searches.

#### Answer: D

Explanation:

Splunk multisite indexer clustering is designed to tolerate temporary network and management-plane failures.

The Cluster Manager is responsible for bucket replication coordination, fix-up tasks, and cluster state management, but it is not required for ongoing searching.

When Site 2 loses connectivity to Site 1 due to DNS failure, indexers at Site 2 continue to serve searchable buckets they already own. Search heads can still dispatch searches to available indexers and retrieve results from searchable copies that exist locally. Splunk documentation explains that as long as searchable copies are available and indexers are reachable, searching continues normally, even if the Cluster Manager is temporarily unreachable. Only replication management and bucket fix-up operations are paused.

The cluster does not stop responding to searches, does not redirect searches to unreachable sites, and search heads never begin indexing data.

Therefore, the correct answer is B: The cluster continues to function and respond to searches.
