問題 #96

A Solutions Architect is designing a routing solution for a branch office. The office has a core switch that needs to be configured to route between the local user VLAN (VLAN 10) and a server VLAN (VLAN 20). Additionally, all traffic destined for the internet must be forwarded to a primary firewall at 10.255.255.1. For redundancy, a secondary, floating static route should be configured to forward traffic to a backup firewall at 10.255.255.5 only if the primary path fails.

Initial State:

- * The switch is in its factory default state, connected via the console.
- * VLANs 10 and 20 are already created.

Required Configuration:

- * Enable IP routing on the switch.
- * Configure an SVI for VLAN 10 with IP address 192.168.10.1/24.
- * Configure an SVI for VLAN 20 with IP address 192.168.20.1/24.
- * Configure the primary default route to 10.255.255.1.
- * Configure the backup default route to 10.255.255.5 with an administrative distance of 10.

Which configuration set correctly implements this routing design?

- A. ip routing
interface vlan 10
ip address 192.168.10.1/24
interface vlan 20
ip address 192.168.20.1/24
ip route 0.0.0.0/0 10.255.255.1 preference 1
ip route 0.0.0.0/0 10.255.255.5 preference 10
- B. interface vlan 10
ip address 192.168.10.1/24
interface vlan 20
ip address 192.168.20.1/24
ip route 0.0.0.0/0 10.255.255.1
ip route 0.0.0.0/0 10.255.255.5 distance 10
- C. ip routing
interface vlan 10
ip address 192.168.10.1/24
interface vlan 20
ip address 192.168.20.1/24
ip route 0.0.0.0/0 10.255.255.1
ip route 0.0.0.0/0 10.255.255.5 10
- D. ip routing
interface vlan 10
ip address 192.168.10.1/24
interface vlan 20
ip address 192.168.20.1/24
ip route 0.0.0.0/0 10.255.255.1 metric 1
ip route 0.0.0.0/0 10.255.255.5 metric 10

答案: C

問題 #97

A Network Technician is troubleshooting a link between a switch and a server. The switch port is configured for 1000BASE-T, full-duplex. The server's network card is older and only supports 100Mbps, half-duplex. The devices are set to auto-negotiate.

What is the most likely outcome of this duplex mismatch?

- A. The link will operate at 100Mbps, but performance will be extremely poor due to collisions and errors.
- B. The link will successfully negotiate to 100Mbps, full-duplex.
- C. The switch will operate at 1000Mbps, and the server will drop most packets.
- D. The link will fail to come up, and no traffic will pass.

答案: A

問題 #98

What is the primary purpose of VSF configuration?

- A. To optimize network routing protocols
- **B. To combine multiple physical switches into a single virtual chassis**
- C. To manage network devices remotely
- D. To distribute network traffic across multiple physical switches

答案: B

問題 #99

A Network Technician is installing a new HPE Aruba Networking CX switch and needs to connect it to the console port for initial configuration.

What type of physical port and cable are typically used for this direct, local management connection?

- **A. A USB-C console port using a USB-C cable.**
- B. A DB-9 serial port using a coaxial cable.
- C. An SFP+ port using a fiber optic cable.
- D. An RJ-45 Ethernet port using a standard patch cable.

答案: A

問題 #100

A Network Technician is observing a high number of late collisions and CRC errors on a switch port that is connected to an older hub. The port is configured for auto-negotiation. What Layer 1 issue is the most likely cause of these errors?

- A. The switch port has negotiated to a higher speed than the hub can support.
- B. The switch port and the hub are operating in full-duplex mode.
- **C. The switch port has negotiated to full-duplex, while the hub can only operate in half-duplex.**
- D. The cable connecting the switch and the hub is too short.

答案: C
