**Answer: D**

**NEW QUESTION # 123**

An administrator wants to check the status of the Solutions Enabler Base daemon in a management host. What is the name of the Base daemon?

- A. storapid
- B. storsrmd
- C. storstpd
- D. storsrvd

**Answer: A**

**NEW QUESTION # 124**

A TimeFinder SnapVX snapshot of source volumes has been linked to target volumes. The target volumes are being used for application testing.

What should be done prior to a relink operation?

- A. Continue accessing the source and target volumes
- B. Stop accessing the source volumes; continue accessing the target volumes
- C. Stop accessing the source and target volumes
- D. Continue accessing the source volumes; stop accessing the target volumes

**Answer: D**

**NEW QUESTION # 125**

When setting Host I/O Limits on a Storage Group, what are the available dynamic I/O distribution modes?

- A. Never, Balanced, and Always
- B. Balanced, OnFailure, and Never
- C. Never, OnFailure, and Always
- D. Balanced Always, and OnFailure

**Answer: A**

Explanation:

Step by Step Comprehensive Detailed Explanation:

Host I/O Limits in PowerMax allow you to control the maximum IOPS (Input/Output Operations Per Second) or bandwidth that a storage group can consume. This helps prevent performance issues caused by one application or workload monopolizing resources. When setting Host I/O Limits, you can choose from different dynamic I/O distribution modes:

\* Never: This is the default mode. It means that the I/O limits are statically distributed across the directors in the associated masking view. If a director fails, its allocated portion of the I/O limit is lost.

\* Balanced: In this mode, the I/O limits are dynamically adjusted based on the number of online directors. If a director fails, its I/O limit is redistributed among the remaining online directors. This helps maintain performance even in the event of a director failure.

\* Always: This mode provides full dynamic distribution of I/O limits. The limits are continuously adjusted across all online directors based on the current workload and demand. This ensures optimal resource utilization and performance.

References and documents of Dell's public documentation for PowerMax Operate v.2:

\* Dell PowerMax and VMware vSphere Configuration Guide: This guide provides detailed information about Host I/O Limits, including the different distribution modes and their benefits. You can find this document on the Dell Support website by searching for "PowerMax and VMware vSphere Configuration Guide."

\* Dell Solutions Enabler 10.0.0 CLI User Guide: This guide provides information on how to set Host I/O Limits using SYMCLI commands, including the -dynamic option for specifying the distribution mode.

**NEW QUESTION # 126**

How does Unisphere 360 differ from Unisphere for PowerMax?

- A. Unisphere for PowerMax provides centralized monitoring for DMX, VMAX Family, and PowerMax arrays. Unisphere 360 is the management console for PowerMax and VMAX Family arrays.
- B. Unisphere for PowerMax provides only GUI access to PowerMax and VMAX arrays. Unisphere 360 provides both GUI and SYMCLI access to PowerMax and VMAX arrays.
- C. Unisphere for PowerMax is the management console for PowerMax and VMAX Family arrays. Unisphere 360 provides centralized monitoring for DMX, VMAX Family, and PowerMax arrays.
- **D. Unisphere for PowerMax provides both GUI and SYMCLI access to PowerMax and VMAX arrays. Unisphere 360 provides only GUI access to PowerMax and VMAX arrays.**

**Answer: D**

## NEW QUESTION # 127
