Salesforce Certified B2C Commerce Architect Sample Questions (Q48-Q53):

NEW QUESTION # 48

An Architect is configuring a data replication schedule.

Which task(s) can be removed In order to reduce replication times?

- A. Storefront URLs
- B. Campaign
- C. Static content
- D. Search Indexes

Answer: C

NEW QUESTION # 49

During a load test the storefront shows steady but slow performance on all the paces being tested. The Architect opens Pipeline Profiler and sorts the data by "total time" column. The following come as the top Ave items:

Which controller should the Architect focus on to further investigate the performance issue?

- A. Product-HitTile as it has the highest hits during the load test.
- B. Search Show as this Is one of the key controllers that the customer uses
- C. Home-IncludeHeaderMenu as It has highest average time.
- D. Product-Detail as It has the highest total time and highest maximum time.

Answer: C

NEW QUESTION # 50

During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderID as the parameter.

What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- A. Add a customer number in the callback URL and match the customer number against the one stored on the order.
- B. Add HTTPS restriction to the controller start node.
- C. Add a session attribute and validate it on the callback.
- D. Add an order token in the callback URL and match the token against the one stored on the order.

Answer: D

NEW QUESTION # 51

The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations.

Which environment should be used as the ideal environment for this kind of load test?

- A. The Development Instance of the existing Realm.
- B. The Production instance of the existing Realm.
- C. The Production Instance of a rental Realm.
- D. The Development Instance of a rental Realm.

Answer: A

Explanation:

For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.

NEW QUESTION # 52

A company that is a shoe-producer is doing Salesforce B2C Commerce implementation. In their Enterprise Resource Planning (ERP) system, the products are marked as being one of three types: boots, sandals, and sneakers. The business requirements based on the type are:

* The messaging on Product Detail page is different

* Customers are able to filter their Product Search Results

The customer's operations team asks about the format in which to send this value in the catalog.

Which data type should the Architect specify for this attribute in the Data Mapping document?

- A. A custom attribute of type enum-of-string (multiselectable value).
- B. A custom attribute of type string containing comma-separated values.
- **C. A custom attribute of type enum-of-string (single selectable value)**
- D. A custom attribute type set-of-string containing multiple values.

Answer: C

Explanation:

For the shoe producer implementing Salesforce B2C Commerce, the attribute used to specify the type of shoes (boots, sandals, sneakers) should be set as a single selectable value, hence the use of an enum-of-string type. This data type allows for the selection of one option from a predefined list, which is ideal for cases where each product can only be categorized into one type. This ensures that data integrity is maintained while providing clear and distinct categorization that can easily be used for filtering on the Product Search Results page and for customized messaging on the Product Detail page.
