NEW QUESTION # 35

What activities are applied to the entire system and cannot be changed after confirmation in SAP Central Business Configuration?
Note: There are 2 correct answers to this question

- A. Fiscal year variant
- B. Group currency
- C. Scoping
- D. Configuration activities

Answer: A,B

Explanation:
Fiscal year variant and group currency are activities that are applied to the entire system and cannot be changed after confirmation in SAP Central Business Configuration. These activities are part of the system provisioning step, which is the first step in the implementation process. Once the system provisioning is completed and confirmed, the system is locked for these activities and any changes would require a new system provisioning. Scoping and configuration activities, on the other hand, are not applied to the entire system and can be changed later on in the project experience step, which is the second step in the implementation process. Scoping and configuration activities allow the user to adapt the preconfiguration content to their company's needs and extend the configuration for areas not equipped with preconfiguration content. NEW QUESTION # 39

What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Extensibility using the Legacy System Migration Workbench
- B. Combining the local and remote schema approaches into one migration project
- C. Guidance and simulation of the migration process
- D. Mapping source values to SAP S/4HANA target values

Answer: C,D

Explanation:
The SAP S/4HANA Migration Cockpit is a tool that facilitates the transfer of business data from a source system to SAP S/4HANA. It uses migration objects to identify and transfer the relevant data for a specific business object. The SAP S/4HANA Migration Cockpit has the following characteristics1:
* It allows mapping source values to SAP S/4HANA target values, as well as converting values that are migrated from source fields to target fields. This ensures data consistency and quality in the target system.
* It provides guidance and simulation of the migration process, as well as error handling and monitoring.
This helps to reduce the complexity and risk of data migration, and to ensure a smooth and successful data transfer.
* It does not support extensibility using the Legacy System Migration Workbench (LSMW), which is a tool for data migration from legacy systems to SAP systems. The SAP S/4HANA Migration Cockpit has its own extensibility framework, the SAP S/4HANA Migration Object Modeler, which allows creating and enhancing migration objects2.

* It does not combine the local and remote schema approaches into one migration project. The SAP S /4HANA Migration Cockpit offers three options for transferring data to SAP S/4HANA: using files, using staging tables, or using direct transfer from an SAP system1. Each option requires a separate migration project and has its own advantages and limitations3.
