Earn the Credential of Microsoft SC-100 Exam

Prep4pass's web-based Microsoft SC-100 practice test also contains mock exams just like the desktop practice exam software with some extra features. As this is a web-based software, this is accessible through any browser like Opera, Safari, Chrome, Firefox and MS Edge with a good internet connection. Microsoft Cybersecurity Architect (SC-100) practice test is also customizable so that you can easily set the timings and change the number of questions according to your ease.

Microsoft Cybersecurity Architect Sample Questions (Q88-Q93):

NEW QUESTION # 88

You have a Microsoft 365 subscription that is protected by using Microsoft 365 Defender. You are designing a security operations strategy that will use Microsoft Sentinel to monitor events from Microsoft 365 and Microsoft 365 Defender. You need to recommend a solution to meet the following requirements:

- * Integrate Microsoft Sentinel with a third-party security vendor to access information about known malware

* Automatically generate incidents when the IP address of a command-and control server is detected in the events What should you configure in Microsoft Sentinel to meet each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 89

Your company has the virtual machine infrastructure shown in the following table.

The company plans to use Microsoft Azure Backup Server (MABS) to back up the virtual machines to Azure.

You need to provide recommendations to increase the resiliency of the backup strategy to mitigate attacks such as ransomware.

What should you include in the recommendation?

- A. Implement Azure Site Recovery replication.
- **B. Require PINs to disable backups.**
- C. Use customer-managed keys (CMKs) for encryption.
- D. Use geo-redundant storage (GRS).

Answer: B

Explanation:

NEW QUESTION # 90

Your company is migrating data to Azure. The data contains Personally Identifiable Information (PII). The company plans to use Microsoft Information Protection for the PII data store in Azure. You need to recommend a solution to discover PII data at risk in the Azure resources.

What should you include in the recommendation? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 91

You are designing an auditing solution for Azure landing zones that will contain the following components:

- * SQL audit logs for Azure SQL databases
- * Windows Security logs from Azure virtual machines
- * Azure App Service audit logs from App Service web apps

You need to recommend a centralized logging solution for the landing zones. The solution must meet the following requirements:

- * Log all privileged access.
- * Retain logs for at least 365 days.
- * Minimize costs.

What should you include in the recommendation? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 92

You have a Microsoft Entra tenant that syncs with an Active Directory Domain Services (AD DS) domain.

You have an on-premises datacenter that contains 100 servers. The servers run Windows Server and are backed up by using Microsoft Azure Backup Server (MABS).

You are designing a recovery solution for ransomware attacks. The solution follows Microsoft Security Best Practices. You need to ensure that a compromised administrator account cannot be used to delete the backups. What should you do?

- A. From Microsoft Entra Privileged Identity Management (PIM), create a role assignment for the Backup Contributor role.
- B. From Microsoft Azure Backup Setup, register MABS with a Recovery Services vault.
- **C. From Azure Backup, configure multi-user authorization by using Resource Guard.**
- D. From a Recovery Services vault, generate a security PIN for critical operations.

Answer: C

Explanation:

Multi-user authorization (MUA) for Azure Backup allows you to add an additional layer of protection to critical operations on your Recovery Services vaults and Backup vaults. For MUA, Azure Backup uses another Azure resource called the Resource Guard to ensure critical operations are performed only with applicable authorization.

Critical operations

The following table lists the operations defined as critical operations and can be protected by a Resource Guard. You can choose to exclude certain operations from being protected using the Resource Guard when associating vaults with it.

* Delete Backup Instance

Delete protection by stopping backups and performing delete data.
