They work together and strive hard to maintain the top standard of C_ACDET_2506 Exam Practice questions all the time. So you rest assured that with the TorrentValid SAP C_ACDET_2506 exam questions you will ace your C_ACDET_2506 exam preparation and feel confident to solve all questions in the final SAP C_ACDET_2506 exam.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 3	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

You will get the latest and updated study dumps within one year after your purchase. So, do not worry the update and change in the actual test, you will be confident in the real test with the help of our C_ACDET_2506 training torrent.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q30-Q35):

NEW QUESTION # 30
Which scenarios are applicable when moving templates from the test site to the production site by Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- A. New templates that successfully migrated to the production site are in Draft state.
- B. Batch imports are available for templates when migrating configuration bundles.
- C. Published templates with flex master data references in the test site are migrated to the production site during the first migration attempt.
- D. Draft templates on the source site are skipped.

Answer: A,D

Explanation:
ICM only migrates published templates; draft templates are skipped (A). When templates are imported into production, they arrive in draft state by default to allow review and publishing before use (C). Batch imports for templates (B) are not supported; migration is typically handled per template. Flex master data references require manual migration steps and are not migrated automatically during the initial template transfer (D).

NEW QUESTION # 31
Which of the following classes are NOT frequently customized in SAP Ariba Strategic Sourcing solutions?

- A. ExtendedAddressRep
- B. AbstractDocument
- C. ContractWorkspace
- D. SourcingProject

Answer: A

NEW QUESTION # 32
Which of the following considerations are important when creating custom fields? (Select 2 correct answers)

- A. When a field has been created and published, that field type has been consumed from the number of available fields on the class
- B. There's a limit to the number of fields, by data type, that can be added to a class
- C. Published field changes can be reverted via Un-publish to free up memory
- D. The data type of a field can be dynamically changed, depending on data type availability

Answer: A,B

Explanation:
SAP Ariba allocates a finite number of field "slots" per data type for each class. When a custom field is created and published, it consumes one of these slots. Therefore, there are limits to how many fields of each type you can create per class. The data type cannot be changed after creation, and un-publishing does not reclaim the allocated slot; you must delete the field to free resources.

Planning field usage carefully avoids hitting these system limits.

NEW QUESTION # 33

During the configuration of a new custom field, after it's been saved but before the field has been published, you realize that you set the wrong field type. What is the next step you should take to resolve the issue?

- A. Mark the field as Hidden, and create a new field with a slightly different name and the intended field type
- B. Change the field type by selecting the intended type in the dropdown and Save
- C. Delete the field and create a new field with the same name and the intended field type
- D. Clear and recreate the field with the same field name and the intended field type

Answer: C

Explanation:
Once a custom field has been saved, its field type cannot be changed-even if the field has not yet been published. The correct approach is to delete the incorrect field and create a new one with the intended type, optionally using the same name to maintain naming consistency. Clearing or hiding the field does not solve the issue, and the system does not allow type changes via the UI once saved. This approach is standard in SAP Ariba field management to avoid data integrity issues.

NEW QUESTION # 34

You need to revise a published form template. What steps do you follow?

- A. Delete and recreate
- B. Clone and change ID
- C. Create a new version, edit, test, and publish
- D. Edit directly in production

Answer: C

Explanation:
SAP Ariba requires that revisions to published form templates be handled through creating a new version of the template, then editing and testing the draft version before publishing it. The system maintains the prior published version active while you work on the new draft, ensuring no disruption. Cloning and changing IDs is unnecessary and not best practice. Direct edits on published templates are not permitted, and deleting and recreating loses version history and control. This versioning mechanism supports safe, auditable template changes.

NEW QUESTION # 35

......

Our C_ACDET_2506 study materials target all users and any learners, regardless of their age, gender and education background. We provide 3 versions for the clients to choose based on the consideration that all the users can choose the most suitable version to learn. The 3 versions each support different using method and equipment and the client can use the C_ACDET_2506 Study Materials on the smart phones, laptops or the tablet computers.
