Reliable CheckPoint 156-587 Exam Registration - Exam Sample 156-587 Online

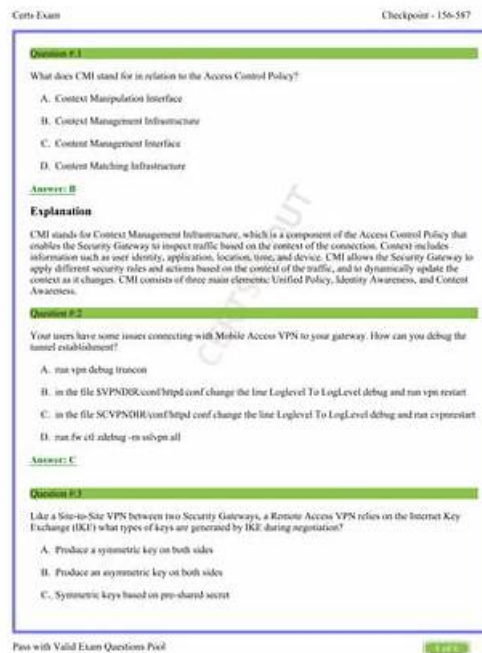

What's more, part of that ExamDiscuss 156-587 dumps now are free: https://drive.google.com/open?id=1PCVAQhlwXBESyIzTwPmdkDmH5YJf6L2S

Our CheckPoint 156-587 exam training dumps will help you master the real test and prepare well for your exam. If you worry about your exam, our CheckPoint 156-587 Exam Training dumps will guide you and make you well preparing you will pass exam without any doubt. Our products are just suitable for you.

CheckPoint 156-587 Exam Syllabus Topics:

Topic	Details
Topic 1	• Introduction to Advanced Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and covers the foundational concepts of advanced troubleshooting techniques. It introduces candidates to various methodologies and approaches used to identify and resolve complex issues in network environments.
Topic 2	• Advanced Client-to-Site VPN Troubleshooting: This section of the exam measures the skills of CheckPoint System Administrators and focuses on troubleshooting client-to-site VPN issues.
Topic 3	• Advanced Firewall Kernel Debugging: This section of the exam measures the skills of Check Point Network Security Administrators and focuses on kernel-level debugging for firewalls. Candidates will learn how to analyze kernel logs and troubleshoot firewall-related issues at a deeper level.

Topic 4	• Advanced Site-to-Site VPN Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and covers troubleshooting site-to-site VPN connections.
Topic 5	• Advanced Access Control Troubleshooting: This section of the exam measures the skills of Check Point System Administrators in demonstrating expertise in troubleshooting access control mechanisms. It involves understanding user permissions and resolving authentication issues.
Topic 6	• Advanced Troubleshooting with Logs and Events: This section of the exam measures the skills of Check Point Security Administrators and covers the analysis of logs and events for troubleshooting. Candidates will learn how to interpret log data to identify issues and security threats effectively.
Topic 7	• Advanced Management Server Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and focuses on troubleshooting management servers. It emphasizes understanding server architecture and diagnosing problems related to server performance and connectivity.
Topic 8	• Advanced Identity Awareness Troubleshooting: This section of the exam measures the skills of heck Point Security Consultants and focuses on troubleshooting identity awareness systems.

Pass Guaranteed Quiz The Best 156-587 - Reliable Check Point Certified Troubleshooting Expert - R81.20 Exam Registration

Are you an exam jittering? Are you like a cat on hot bricks before your driving test? Do you have put a test anxiety disorder? If your answer is yes, we think that it is high time for you to use our 156-587 exam question. Our 156-587 study materials have confidence to help you Pass 156-587 Exam successfully and get related certification that you long for. The 156-587 guide torrent from our company must be a good choice for you, and then we will help you understand our 156-587 test questions in detail.

CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q10-Q15):

NEW QUESTION # 10
Which of these packet processing components stores Rule Base matching state-related information?

- A. Manager
- B. Handlers
- C. Classifiers
- D. Observers

Answer: B

Explanation:
While specific Check Point CCTE R81.20 official documentation that explicitly singles out "Handlers" from the given options as the sole component for storing Rule Base matching state-related information is not readily available in the provided search snippets, CCTE exam preparation materials consistently point to "Handlers" as the correct answer for this question.
In the broader context of Check Point's packet processing and Unified Policy architecture, several components are involved in rule base matching:
According to Check Point's sk120964 - ATRG: Unified Policy (relevant for R81.20):
Connection/Transaction: This logical entity "Saves rulebase matching state and classification objects (CLOBs)." Manager: This component acts as a "Mediator between other components. Responsible for the whole rule base execution process. Creates connection/transactions, as required. Sends logs." Classifiers: These are "CMI_LOADER applications" (e.g., Network, Identity, Application Control) that provide classification data (CLOBs) used in the matching process.
Observers: An "Observer is a unit collecting CLOBs for classification refinement."
"Handlers" in a general firewall architecture are typically components (which can be kernel modules or processes) responsible for managing active connections and their progression through policy enforcement. As such, they would inherently be involved in maintaining and accessing state information related to rule base matching for those connections. The "Connection/Transaction" objects, which store the rule base matching state, are created by the Manager and would be managed by such Handlers during the

lifecycle of a connection.

Therefore, in the context of the CCTE R81.20 exam, "Handlers" are understood to be the packet processing components that store this Rule Base matching state-related information. The state itself is conceptually saved within Connection/Transaction objects, which are orchestrated by the Manager and utilized by various processing components often referred to as Handlers.

Reference (based on Unified Policy component roles from official Check Point documentation):

Check Point Support Center sk120964: ATRG: Unified Policy. (Last Modified: 2024-12-29, relevant for R81.20)."Connection/Transaction. Saves rulebase matching state and classification objects (CLOBs)."

"Manager. Mediator between other components. Responsible for the whole rule base execution process. Creates connection/transactions, as required.

NEW QUESTION # 11

URL Filtering is an essential part of Web Security in the Gateway. For the Security Gateway to perform a URL lookup when a client makes a URL request, where is the sync-request forwarded from if a sync-request is required?

- A. URLF Kernel Client
- B. URLF Online Service
- C. RAD User Space
- D. RAD Kernel Space

Answer: B

NEW QUESTION # 12

Which of the following daemons is used for Threat Extraction?

- A. tedex
- B. scrubd
- C. tex
- D. extractd

Answer: D

NEW QUESTION # 13

When viewing data for CPMI objects in the Postgres database, what table column should be selected to query for the object instance?

- A. GuiDBedit
- B. fwset
- C. CPM Global M
- D. CpmiHostCkp

Answer: D

Explanation:

The CpmiHostCkp table in the Postgres database contains the data for CPMI objects, such as gateways, clusters, and servers. The table column that should be selected to query for the object instance is the objid column, which is the primary key of the table and uniquely identifies each object. The objid column can be used to join with other tables that reference CPMI objects, such as CpmiClusterMember, CpmiCluster, and CpmiServer. The objid column can also be used to retrieve the object name, IP address, type, and other attributes from the CpmiHostCkp table itself. References:

* Check Point Database Tool (GuiDBedit Tool) - Section: How to use the Check Point Database Tool (GuiDBedit Tool) - Subsection: How to view the data in the database

* Check Point Certified Troubleshooting Expert (CCTE) - Exam Topics - Module 6: Advanced Management Server Troubleshooting

* [Check Point R81 Database Schema] - Section: CPMI Tables - Subsection: CpmiHostCkp Table

NEW QUESTION # 14

You are seeing output from the previous kernel debug. What command should you use to avoid that?

- A. fw ctl debug 0
- B. fw ctl debug = 0
- C. fw ctl clean buffer = 0
- D. fw ctl zdebug disable

Answer: A

NEW QUESTION # 15
