

Valid OGA-032 Study Plan & Latest OGA-032 Dumps Ppt

Passitcertify updated study material for OGA-032 Exam Questions: Secret to Success

Passitcertify offers study material for OGA-032 Exam Dumps in two formats,

- PDF: In PDF you will find actual exam questions for The Open Group OGA-032 exam. All the material is designed by experts and ensure your success. You will get exam related question to uproot them, which otherwise you will face. The PDF for Open Group ArchiMate OGA-032 exam can easily be downloaded and read. The study material for OGA-032 exam is conveniently portable.
- Practice Exam Software: Our Practice Exams' platform offers you a practical examination scenario for The Open Group OGA-032 Exam. It's an integrated platform which allows you to select questions, time slot and provides you an opportunity to gauge your own understanding about ArchiMate Accrediation.

Passitcertify

Might it be said that you are enthused about drifting through the The Open Group OGA-032 certification on the chief endeavor? Then, you are at the ideal locale for The Open Group OGA-032 exam Readiness. The Open Group OGA-032 Dumps gives you the most recent review material that has been figured out for you to pass the OGA-032 exam on the key endeavor.

The Open Group OGA-032: ArchiMate 3 Part 2 Exam is a certification exam that evaluates the knowledge and skills of candidates in the area of enterprise architecture. OGA-032 Exam is designed for professionals who are interested in demonstrating their expertise in using the ArchiMate 3 modeling language for enterprise architecture development. ArchiMate 3 Part 2 Exam certification exam is a globally recognized certification that is highly valued in the industry.

Quiz 2026 Latest The Open Group Valid OGA-032 Study Plan

Under the guidance of our OGA-032 preparation materials, you are able to be more productive and efficient, because we can provide tailor-made exam focus for different students, simplify the long and boring reference books by adding examples and diagrams and our experts will update OGA-032 Guide dumps on a daily basis to avoid the unchangeable matters. You can finish your daily task with our OGA-032 study materials more quickly and efficiently.

The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

Please read this scenario prior to answering the question

A financial institution runs a Loan Approval process supported by a Loan Processing application and a Risk Assessment application. The Loan Processing application evaluates loan data using Business Rules stored in a Rules Repository. Risk Assessment retrieves credit scores from an external API.

Both applications run on virtual application servers connected to internal and external networks.

Refer to the scenario.

Which answer is most complete?

- A. Use association relationships only to show credit bureau integration.
- **B. Model Loan Approval as a Business Process served by Application Services realized by Application Functions accessing Data Objects (Loan Request, Risk Report, Business Rules), deployed on Virtual Nodes connected via Communication Networks.**
- C. Model only application components.
- D. Model everything only in the Technology Layer.

Answer: B

NEW QUESTION # 14

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.

Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.

Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying keywork packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.

It is important to consider existing supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

Refer to the Scenario

You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes Which of the following models best answers this?

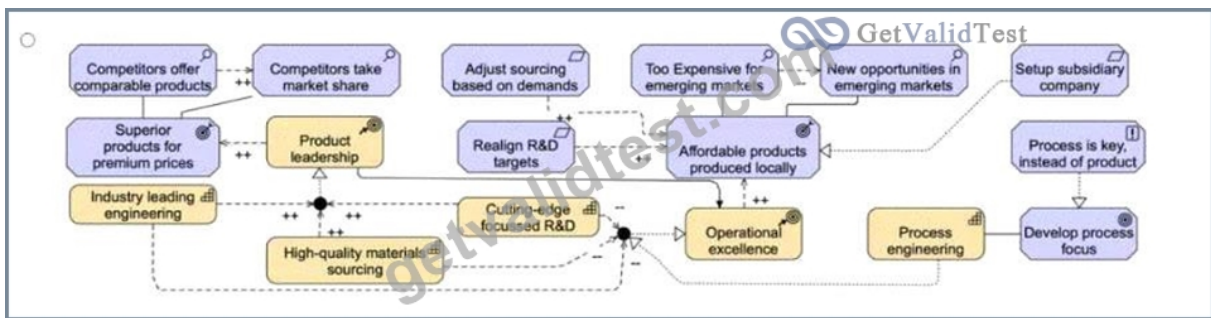

- A. A diagram of a process AI-generated content may be incorrect.

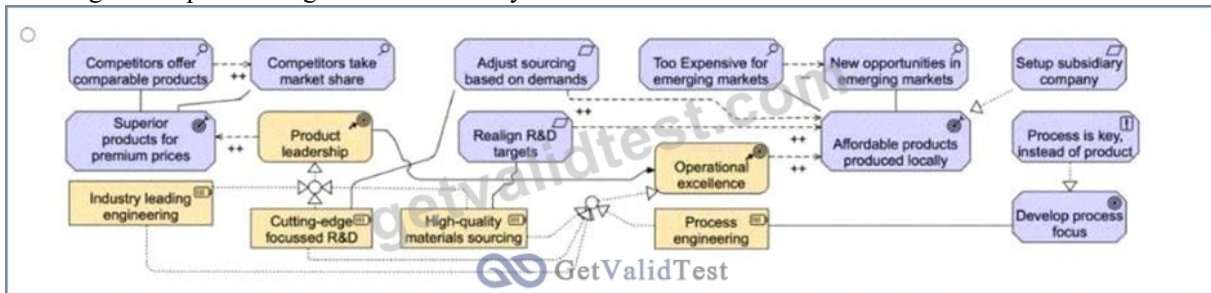

- B. A diagram of a process AI-generated content may be incorrect.

- C. A diagram of a process AI-generated content may be incorrect.

- D. A diagram of a process AI-generated content may be incorrect.

Answer: A

Explanation:

We need to find the model that best represents:

- * Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.
- * Strategic Shift- Moving from product leadership to operational excellence to enter emerging markets.
- * Required Changes-
 - * Adjusting R&D targets to support cost-effective production.
 - * Revising materials sourcing for optimization.
 - * Introducing process engineering to enable a process-oriented mindset.
- * Motivations Behind the Changes-
 - * Competitor pressure.
 - * Emerging market opportunities.
 - * High costs limiting mass-market success.

Why D is the Best Choice:

#Includes all current and future capabilities- Shows the existing strengths of engineering, R&D, and materials sourcing while introducing process engineering as required for operational excellence. #Clearly depicts the shift in strategy- From product leadership to operational excellence and the necessary transformations. #Captures stakeholder concerns and motivations- Including competition, cost concerns, and emerging market opportunities. #Represents dependencies and sequencing correctly- Reflecting how each capability change contributes to the transition states and ultimate business goals.

Why Not A, B, or C?

- * A: Does not properly represent the transition between product leadership and operational excellence.
- * B: Fails to clearly define the required capability changes and motivations.
- * C: Lacks key relationships between strategy shifts and operational changes.

NEW QUESTION # 15

Please read this scenario prior to answering the question

A healthcare provider operates a Patient Admission process supported by the Admission Portal application and Insurance Verification application.

Patient data is stored as Patient Records. Insurance Verification consumes an external Web API.

Both applications are deployed in a Kubernetes cluster running on physical servers connected via a hospital LAN and redundant storage arrays.

Refer to the scenario.

You must produce a cross-layer model showing behavior, data, and infrastructure.

Which model is most appropriate?

- A. Model Insurance Verification as a Business Actor.
- B. Model only the Kubernetes cluster.

- C. Model Patient Admission as a Business Process served by Application Services realized by Application Functions assigned to Application Components deployed on Nodes, with Access relationships to Data Objects and connections via Communication Networks.
- D. Represent records only as Technology Artifacts.

Answer: C

NEW QUESTION # 16

Please read this scenario prior to answering the question

ArchiAir Catering Services (ACS) manages the catering services for ArchiAir, a leading airline.

ACS is the sole catering supplier for all ArchiAir flights, and its services include full provisioning to the aircraft.

Currently, ACS operates three central production facilities, supported by distribution hubs and local pre-flight production facilities. The central production facilities are responsible for producing standardized non-food materials (such as plates, cutlery, and boxes), non-perishable food products, and key ingredients required by the local production facilities. These materials are subsequently distributed to the distribution hubs, which also serve as warehouses for the local production facilities. Within the local production facilities, multiple production machines are utilized, each featuring dedicated workstations for chefs and quality inspectors. Most of the local production facilities employ fully automated assembly lines, including built-in packaging stations. The loaded service trolleys are then transported to the aircraft using small lorries.

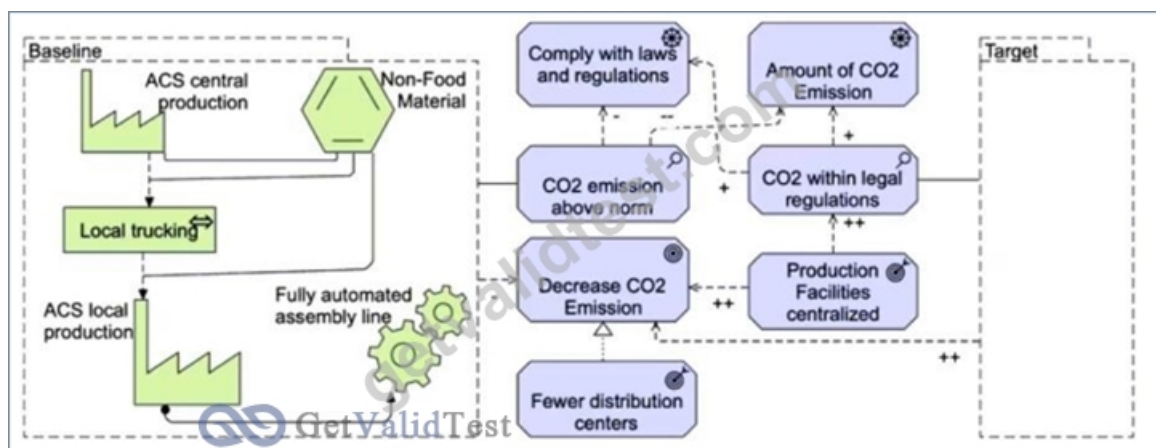

The loaded service trolleys are then transported to the aircraft using small lorries.

In response to investor pressure for ArchiAir to reduce its carbon footprint, the CEO of ACS has announced a plan to address this environmental concern. Subsequently, the Ministry of Social Welfare and Health has enacted a law mandating a reduction in CO2 emissions from all production facilities by the end of the year. Additionally, the airline's decision to raise ticket prices due to escalating fuel costs has led to a decrease in passenger numbers. This, in turn, impacts the volume of non-food materials required from ACS. An internal investigation has produced a report highlighting the potential benefits of centralizing production facilities and reducing the number of distribution centers. Such changes would result in lower CO2 emissions while still effectively meeting all the requirements of ArchiAir.

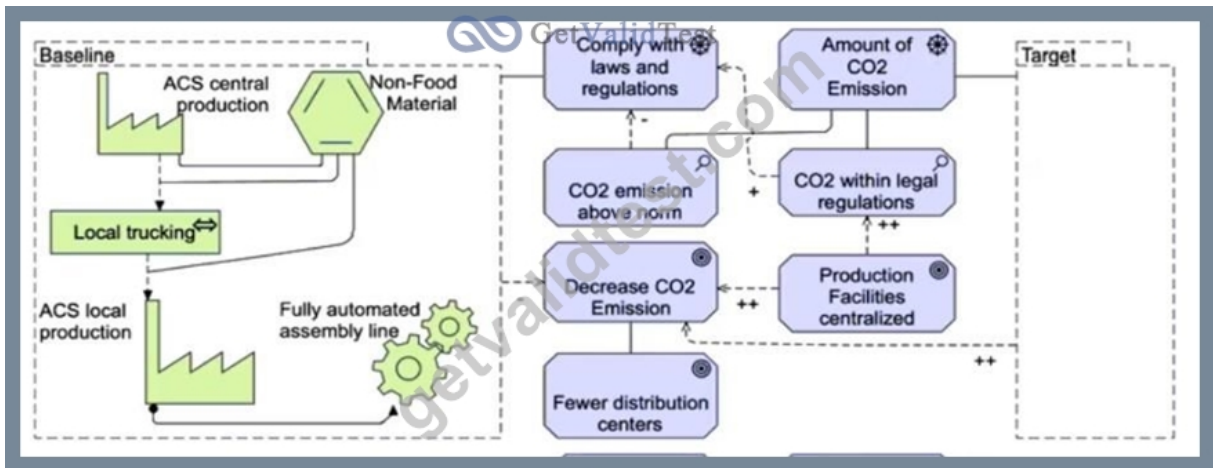

In addition to evaluating its supply chain to reduce its carbon footprint, ArchiAir is taking proactive steps to achieve a net zero carbon footprint for its IT operations. The Chief Information Officer (CIO) has identified two crucial requirements to support this endeavor. The first requirement involves switching to renewable energy for ACS facilities, which are often located in remote areas where traditional fuels are the primary source of energy. To align with sustainability goals, ArchiAir aims to transition these facilities to renewable energy sources. By utilizing renewable energy, ArchiAir can significantly reduce its reliance on traditional fuels and contribute to a greener operation. The second requirement pertains to the scalability of ArchiAir's IT operations, taking into account the airline's susceptibility to seasonal changes in demand. The CIO has observed notable disparities between sites that have additional blade servers and can scale their capacity, and sites that solely rely on the two mainframes housed in central facilities. A comprehensive report has revealed that the blade servers have a negligible impact on resource waste, whereas the mainframes are notorious for their power inefficiency, particularly during periods of low demand.

Refer to the Scenario

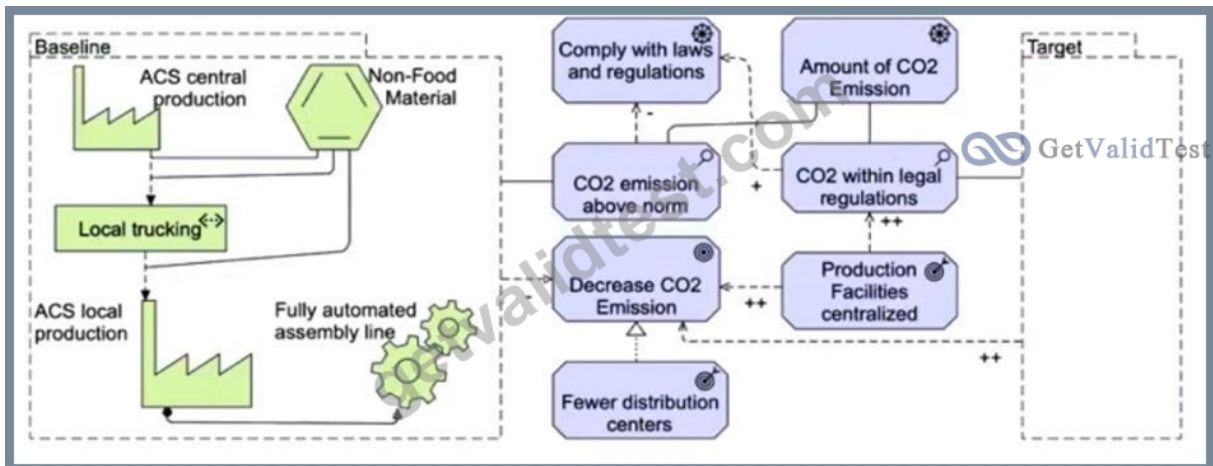

Which of the following answers best describes the proposed transition from baseline to target, including details of motivation for changes? Note that there is no need to show the details of the target state.

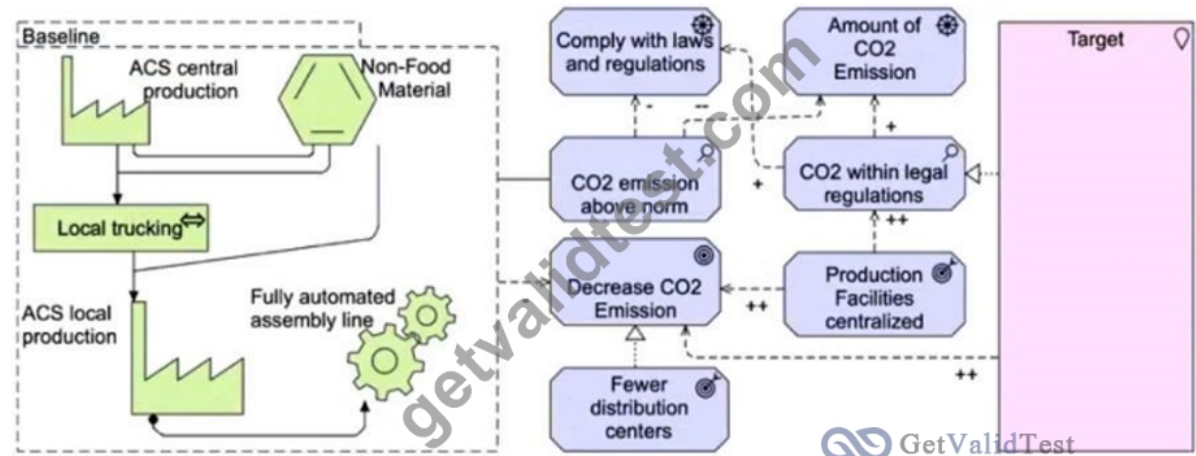

- A.
- B.

• C.

• D.

Answer: C

Explanation:

This model clearly shows the "baseline → motivations → target" plateau map with all of the Motivation elements correctly typed and the single, blank target plateau on the right. It has:

- A dashed-box Plateau on the left containing "ACS central production," "Non-Food Material,"

"Local trucking," "ACS local production" and "Fully automated assembly line."

- All of the Motivation elements in the middle (Driver "Comply with laws and regulations," Assessment "CO2 emission above norm," Requirement "CO2 within legal regulations," Goal

"Decrease CO2 emission," Plateau "Production facilities centralized," Requirement "Fewer distribution centers," plus the Goal "Amount of CO2 emission").

- The correct ArchiMate badges (gear for Driver, magnifier for Assessment, key-bullet for Requirements, target for Goals, scribble for Plateau) and the right influence/composition flows.

- A dashed-box Plateau on the right labelled "Target," left empty per the brief.

NEW QUESTION # 17

Please read this scenario prior to answering the question

The ArchiSurance enterprise document management solution includes a sophisticated ecosystem of applications and technologies. Designed with a strong emphasis on high availability, it plays a vital role in providing support for a diverse range of document types and managing a substantial volume of document-based transactions on a daily basis. Recognizing its importance to the business, the document management solution is redundantly hosted at two geographically separate data center sites, both configured identically for seamless operations.

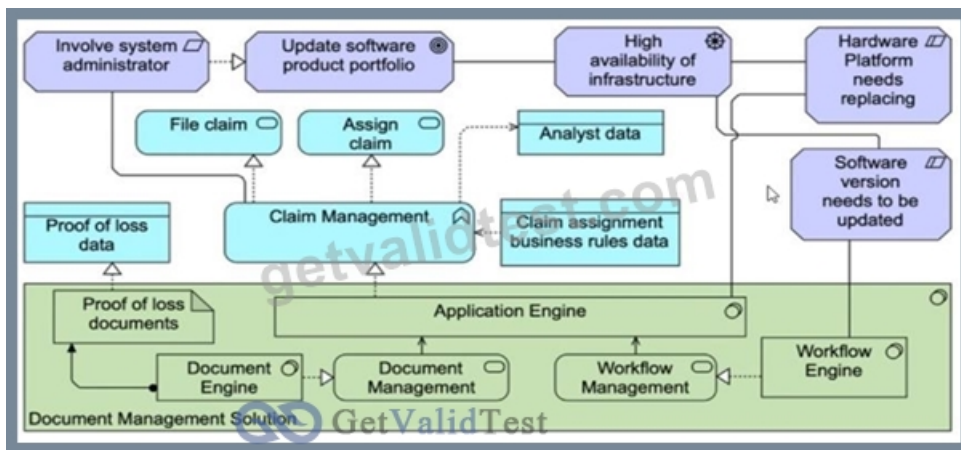

The system software at the core of the document management solution is comprised of three key modules. The Document Engine serves as a repository, facilitating document storage, retrieval, and various other operations. The Workflow Engine acts as a host for document management applications, while the Application Engine powers the most advanced and sophisticated applications within the system.

Two key factors have driven the Architecture Board's approval of a project aimed at updating this critical solution. Firstly, the supplier of the Workflow Engine has given notice of the end of support for the current software version, necessitating an upgrade. Secondly, the system administrator responsible for the Application Engine has flagged the need for hardware replacement on the server where the software is currently running. Given that the Claim Management application shares infrastructure with the Application Engine, the involvement of the system administrator responsible for this application is crucial in the project planning and execution.

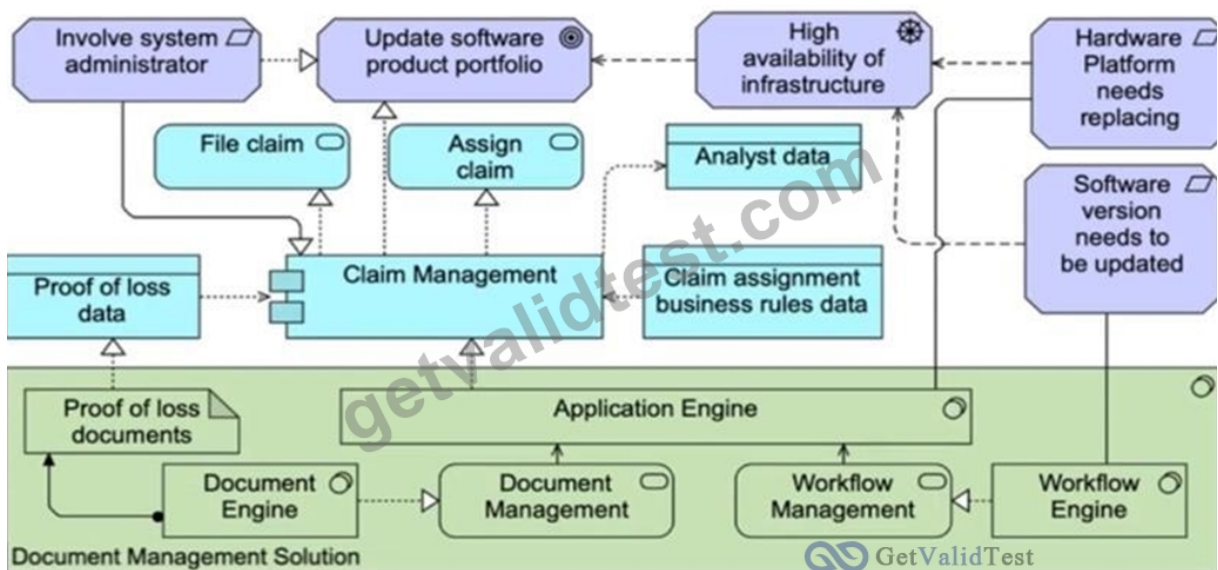

Refer to the Scenario

You are the Enterprise Architect within this organization. You have been assigned the task of modeling the applications and technology for this solution, as well as outlining the motivations driving the need for its update.

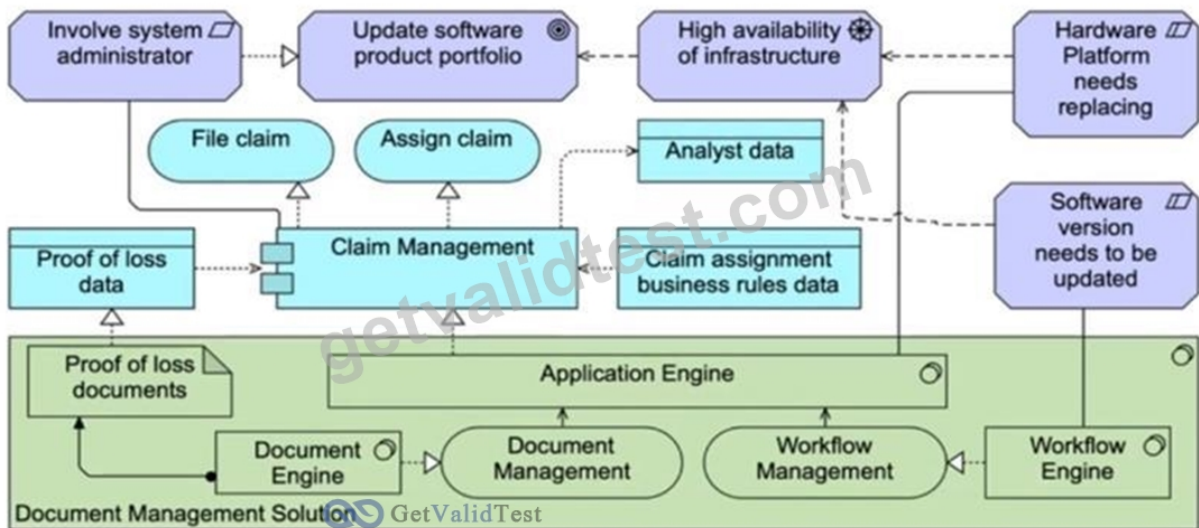

Based on the scenario, which answer provides the most complete and accurate description?

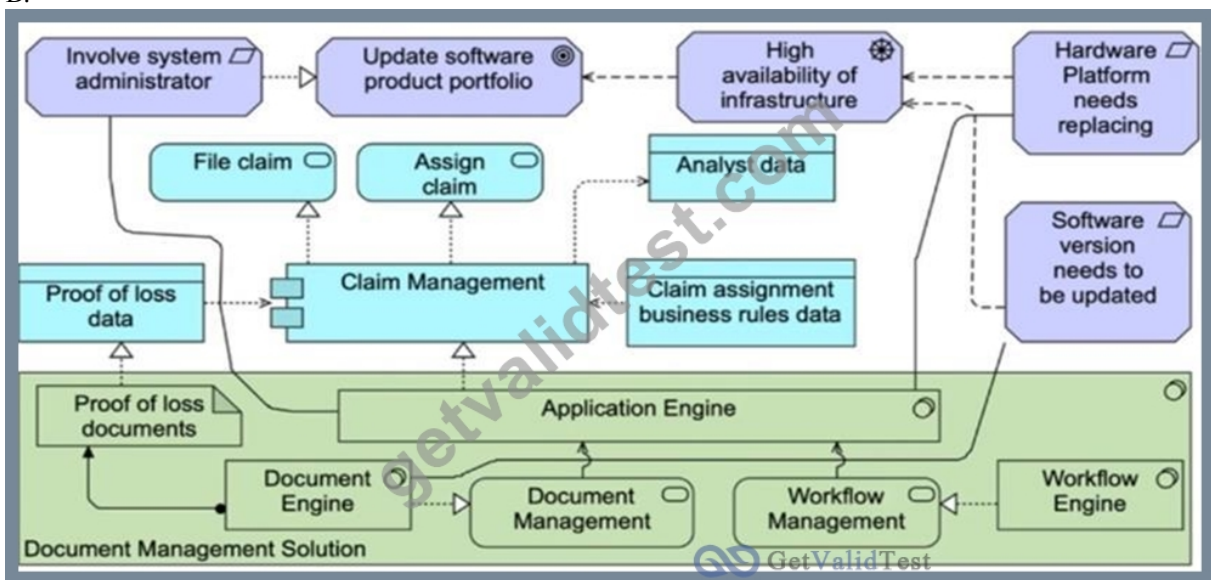

- A.
- B.

- C.

• D.

Answer: C

Explanation:

Chosen option provides the most complete and accurate representation according to the scenario:

It clearly models the motivations (e.g., "Involve system administrator," "Update software product portfolio," "High availability of infrastructure," "Hardware platform needs replacing," "Software version needs to be updated") and their relationships, capturing both the software and hardware motivations driving the project.

The business layer is represented with processes/services ("File claim," "Assign claim"), and the supporting data objects are linked appropriately (e.g., "Proof of loss data," "Analyst data," "Claim assignment business rules data").

The application layer accurately shows the main components ("Claim Management," "Application Engine," "Document Engine," "Document Management," "Workflow Management," "Workflow Engine") and their interactions, which reflects the described architecture of the document management solution.

The technology layer is represented by the green background (Document Management Solution), which contains the application components as described, showing how infrastructure supports application services.

Relationships between all layers (motivation, business, application, and technology) are clearly modeled, allowing for end-to-end traceability from motivation to implementation.

NEW QUESTION # 18

.....

With our OGA-032 practice materials, and your persistence towards success, you can be optimistic about your OGA-032 real dumps. Even you have bought our OGA-032 learning braindumps, and we will send the new updates to you one year long. On one

hand, all content can radically give you the best backup to make progress. On the other hand, our OGA-032 Exam Questions are classy and can broaden your preview potentially. Their efficiency has far beyond your expectation!
