NEW QUESTION # 173

Which statement is true about estimating and forecasting the Portfolio Backlog?

- A. WSJF is used to assign Epics to Value Streams
- B. Feature estimates are rolled up into Epic estimates
- C. Refinement is necessary when estimating the effort needed to implement an Epic

Answer: C

Explanation:

In the SAFe framework, estimating and forecasting the Portfolio Backlog involves a rigorous process to ensure that Epics are ready for implementation with an appropriate level of discovery and risk. The statement that "Refinement is necessary when estimating the effort needed to implement an Epic" is true and aligns with the SAFe principles.

The Portfolio Backlog is a high-level Kanban system used to capture and manage business and enabler Epics intended to create and evolve the portfolio's products, services, and solutions. Lean Portfolio Management (LPM) is responsible for developing, maintaining, and prioritizing the Portfolio Backlog. They collaborate with stakeholders to discover the Epics needed to advance the portfolio's solutions¹.

Refining the Portfolio Backlog to ensure readiness often involves the following activities:

- * Reviewing new Epics and determining their alignment with the portfolio's strategic themes and vision.
- * Evaluating the Epic Hypothesis Statement to decide whether it warrants assignment to an Epic Owner.
- * Prioritizing the backlog using Weighted Shortest Job First (WSJF) and other factors in collaboration with Business Owners, Enterprise Architects, Product Management, and other stakeholders¹.

This refinement process is essential for estimating the effort needed to implement an Epic accurately. It ensures that Epics are sufficiently understood and prepared before they enter the implementation phase. The refinement activities typically occur during the Portfolio Sync and the Strategic Portfolio Review events, where LPM and its stakeholders add new backlog items to the Funnel, update priorities, and remove less promising Epics¹.

Therefore, refinement is a critical step in estimating and forecasting the Portfolio Backlog, as it helps in understanding the scope, impact, and effort required for each Epic, ensuring that they are ready for implementation and aligned with the strategic objectives of the organization.

NEW QUESTION # 174

In addition to Innovation and Planning, what else does the IP Iteration provide time for?

- A. Additional planned work
- B. An opportunity to integrate and perform end-to-end testing
- C. An estimating guard band
- D. Building in quality and compliance

Answer: C

NEW QUESTION # 175

Iteration Goals serve what purpose?

- A. To set preliminary PI Objectives
- B. To define the what, the how, and the how much
- C. To align team members to a common purpose

Answer: C

Explanation:

Iteration Goals in SAFe serve as a high-level summary of the business and technical goals that an Agile Team agrees to accomplish in an Iteration. They are essential for several reasons:

- * They align team members to a common purpose, ensuring everyone is working towards the same objectives.
- * They support the alignment of teams to common Program Increment (PI) Objectives and manage dependencies.
- * They provide transparency and management information, allowing all stakeholders to have a shared language for maintaining alignment, managing dependencies, and making necessary adjustments during the execution of the Planning Interval.

Iteration goals help create coherence and focus within the team, encouraging collaboration and improving flow by limiting work in process (WIP). In the context of the Agile Release Train (ART), iteration goals help maintain a larger view of what the team intends to accomplish in each iteration and what to present in the upcoming System Demo1.
