Cisco 350-601 Test Questions Fee | 350-601 Valid Exam Topics

Our Cisco 350-601 Practice Exam software is compatible with Windows computers. If you run into any issues while using our Implementing Cisco Data Center Core Technologies (350-601 DCCOR) (350-601) exam simulation software, our 24/7 product support team is here to help you. One of our 350-601 desktop practice exam software's other feature is that it can be used even without an active internet connection. The Internet is only required for product license validation. This feature allows users to practice without an active internet connection.

Cisco 350-601 certification exam is a challenging assessment that requires in-depth knowledge and practical skills in data center technologies. It consists of 90-110 questions that must be answered within 120 minutes. The questions are designed to test the candidates' understanding of data center infrastructure, security, automation, and virtualization, and their ability to solve complex problems related to these technologies.

Cisco 350-601 Exam consists of 90-110 multiple-choice questions and has a duration of 120 minutes. 350-601 exam is available in English and Japanese and can be taken at any Pearson VUE testing center worldwide. Candidates can register for the exam online or by phone, and the cost of the exam varies depending on the country.

Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q109-Q114):

NEW QUESTION # 109

An engineer must deploy a new Cisco UCS domain with a pair of fabric interconnects. A storage device will be connected directly to the fabric interconnects. Which configuration steps must be taken in the UCS domain to complete the configuration?

- A. Create different VSANs on each fabric interconnect.
Set the Fibre Channel Switching mode to NPV.
- B. Create identical VSANs on each fabric interconnect.
Enable End-Host mode.
- C. Create identical VSANs on each fabric interconnect.
Set the Fibre Channel Switching mode to Switch.
- D. Create different VSANs on each fabric interconnect.
Enable NPV mode.

Answer: C

Explanation:

When connecting a storage device directly to Cisco UCS Fabric Interconnects, the following configuration steps are required:

1. Create identical VSANs on each fabric interconnect:

VSANs (Virtual Storage Area Networks) are required to segment the Fibre Channel traffic, and they must match on both fabric interconnects to ensure proper connectivity and failover.

2. Set the Fibre Channel Switching mode to Switch:

In this mode, the fabric interconnect operates as a standard Fibre Channel switch. This is necessary for direct connections to storage devices because they expect to connect to a Fibre Channel switch rather than an NPV device.

NEW QUESTION # 110

A Cisco MDS 9000 series storage Switch has reloaded unexpectedly. Where does the engineer look for the latest core dump file?

- A. /mnt/core
- B. /mnt/logs
- C. /mnt/recovery
- D. /mnt/pss

Answer: D

NEW QUESTION # 111

Refer to the exhibit.

In a bidirectional PIM network using Phantom RP as an RP redundancy mechanism, two Cisco NX-OS routers have these requirements:

* R1 must be the active RP.

* R2 must be the backup RP that is used only if R1 is not reachable

Drag and drop the configuration steps to complete the configuration for Router 2. Not all configuration steps are used.

Answer:

Explanation:

Explanation
10.10.32.121/29 ,
10.10.32.122,
point-to-point ,
sparse-mode

NEW QUESTION # 112

A network administrator must automate the process of pinging all the IP addresses from the 10.0.0.0/8 subnet.

The subnet is already present in the ARP table of the Cisco Nexus switch. Drag and drop the bash commands to generate the desired output. Not all commands are used.

Answer:

Explanation:

Explanation:
vsh -c "show ip arp", awk '{print "ping" \$1}', vsh, egrep "statistics|loss"

Refer to the exhibit. Which configuration ensure that the cisco Nexus 7000 series switches are the primary devices for LACP?

- Answer: D**
