

Exam SCP-NPM Guide | SCP-NPM Latest Test Fee

DOWNLOAD the newest Itcertking SCP-NPM PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1zqMFYKJ6l2BQLBnME6NZxfPADL7Ar5>

Dear every one, please come on and check out free demo of Itcertking exam dumps in PDF test files. Do you see the SolarWinds SCP-NPM free demo? Do not hesitate, go and free download it. You may be surprised to see the questions are very valuable. SCP-NPM online test engine is a test soft for simulating the actual test environment which can offer you the interactive and interesting experience. Besides, SCP-NPM online test engine is virus-free, so you can rest assured to install it and use it. You will be more confident to face your SCP-NPM exam test with SCP-NPM online test engine.

Users can start using the product of Itcertking instantly after purchasing it, so they can start preparing for SolarWinds certification test quickly. Three formats are being provided to customers so that they can access them in every possible way according to their needs. After discussing it with many SolarWinds professionals and getting their positive feedback, the study material has been made. Many exam applicants have used the prep material and rated it the best because they have passed the SolarWinds SCP-NPM Certification Exam in a single try.

Varieties of SolarWinds SCP-NPM Exam Practice Test Questions

Now it is a society of abundant capable people, and there are still a lot of industry is lack of talent, such as the IT industry is quite lack of technical talents. SolarWinds certification SCP-NPM exam is one of testing IT technology certification exams. Itcertking is a website which provide you a training about SolarWinds Certification SCP-NPM Exam related technical knowledge.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

You can display Palo Alto firewalls on Orion Maps.

- A. False
- B. True

Answer: B

Explanation:

Orion Maps 2.0 supports displaying Palo Alto firewalls as network devices, along with their interfaces, zones, policies, and traffic data. You can also view the firewall status, alerts, and events on the map. To add a Palo Alto firewall to an Orion Map, you need to have Network Insight for Palo Alto enabled in NPM, and discover the firewall using SNMP and API polling. References: Orion Maps 2.0, New Alerting, and Palo Alto Networks Monitoring - SolarWinds Lab Episode #77, SolarWinds Lab Episode 77: Orion Maps 2.0, New Alerting, and Palo Alto Networks Monitoring - Orange Matter, Network Insight for Palo Alto Networks in NPM

NEW QUESTION # 31

You need to build an Orion Map to show the relationships and connections between your Cloud servers and on premise infrastructure. You add the nodes but discover that the Orion Platform is not automatically mapping the connection between your cloud server and on premise router. You have verified that layer 2 and layer 3 topologies are being polled on the devices. How do you resolve this issue?

- A. You cannot monitor the connection between on premise and off premise devices
- **B. You need to configure a custom connection between the cloud node and the on premise node**
- C. You need to turn off layer 2 and layer 3 topology polling for cloud monitoring
- D. You need to open the topology ports in your firewall between the on premise node and the cloud node

Answer: B

Explanation:

Sometimes, the Orion Platform may not be able to automatically map the connection between your cloud server and on premise router, even if layer 2 and layer 3 topologies are being polled on the devices. This may happen if the devices are separated by a firewall, a VPN, or a NAT device that prevents the Orion Platform from discovering the link information. In such cases, you can manually create a custom connection between the cloud node and the on premise node on the Orion Map. You can also edit the properties of the custom connection, such as the name, the status, the bandwidth, and the utilization. By creating a custom connection, you can visualize and monitor the connection between your cloud server and on premise router on the Orion Map.

NEW QUESTION # 32

Which is not true for Device Studio Poller?

- A. Polled values are displayed in existing resources
- B. Can poll multiple OIDs for a given technology
- **C. Collects data from Orion Failover Engine or Hot Standby Engines**
- D. Can perform logical operations or transformations on the polled data

Answer: C

Explanation:

Device Studio Poller is a feature that allows users to create custom pollers for devices or technologies that are not supported by default in NPM. It can poll multiple OIDs for a given technology, perform logical operations or transformations on the polled data, and display the polled values in existing resources. However, it does not collect data from Orion Failover Engine or Hot Standby Engines, which are features of Orion High Availability that ensure continuous monitoring in case of primary server failure.

Reference: 1: Create pollers in Device Studio for NPM3, 2: When Good OIDs Go Bad: Customizing Device Pollers, 3: Manage Pollers (AKA Device Studio) question

https://documentation.solarwinds.com/en/success_center/orionplatform/content/core-monitoring-mibs-with-universal-device-pollers-sw548.htm

NEW QUESTION # 33

You deploy a new router on your network. What should you do to ensure NPM correctly interprets SNMP traps from the device?

- A. Review your firewall rules to ensure the traps are not blocked
- B. Contact the router vendor for a firmware update
- C. Verify that NPM is using the correct SNMP community strings
- **D. Update the MIB database**

Answer: D

Explanation:

SNMP traps are unsolicited messages sent by SNMP-enabled devices to notify the NPM server of important events or problems, such as device failures, configuration changes, or performance issues. SNMP traps contain information about the device and the event, such as the device name, IP address, timestamp, and OID (Object Identifier). An OID is a unique identifier for a specific variable in a MIB (Management Information Base), which is a hierarchical database of device information that can be accessed by

SNMP. However, not all OIDs are recognized by NPM by default, as different devices may use different or custom MIBs and OIDs. Therefore, to ensure NPM correctly interprets SNMP traps from a new router on your network, you need to update the MIB database with the latest MIBs from the router vendor or from the SolarWinds website. This will allow NPM to translate the OIDs in the SNMP traps into meaningful names and values, and display them in the Trap Viewer or use them in alerts¹².

To update the MIB database, follow these steps³:

Download the MIB files from the router vendor's website or from the SolarWinds MIB Database.

Copy the MIB files to the \SolarWinds\Orion\Mibs folder on the NPM server.

Click Settings > All Settings > Manage MIBs.

Click Add New MIB and browse to the MIB file that you want to add.

Click Submit.

Repeat steps 4 and 5 for each MIB file that you want to add.

Click Compile to compile the MIBs and update the MIB database.

You can now view the SNMP traps from the new router in the Trap Viewer or use them in alerts. Reference: 1: SNMP Traps Explained: How to View SNMP Traps, 2: SNMP Traps in NPM, 3: Update the SolarWinds MIB Database for the SolarWinds Platform, : SolarWinds MIB Database, : 2, : 1, : 3, : 4

NEW QUESTION # 34

You created a Universal Device Poller. You want to create an alert based on this custom poller. When you create the alert, you select "I want to alert on: Custom Poller." How would you identify the custom poller within the trigger condition?

- A. Using the MIB used in your UnDP
- B. Using the SNMP get type
- C. Using the enabled status
- **D. Using the Unique Name of your UnDP**

Answer: D

Explanation:

To identify the custom poller within the trigger condition, you need to use the Unique Name of your UnDP.

The Unique Name is a user-defined identifier that you assign to your custom poller when you create it using the Universal Device Poller tool. The Unique Name is also used to reference the custom poller in the Orion database and the web console. When you select "I want to alert on: Custom Poller" in the alert configuration, you can choose the specific custom poller by its Unique Name from the list of available pollers. You can also use the Unique Name to filter, group, or sort the custom poller data in reports, charts, or tables. References: Create a custom poller, Create an alert for a custom poller, View custom poller data

NEW QUESTION # 35

.....

Profit from the opportunity to get these top-notch exam questions for the SolarWinds SCP-NPM certification test. We guarantee you that our top-rated SolarWinds SCP-NPM practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the SolarWinds SCP-NPM Certification Exam on the very first go.

SCP-NPM Latest Test Fee: https://www.itcertking.com/SCP-NPM_exam.html

As a relatively renowned company in SCP-NPM exam certification field, we have a professional team contains a number of experts and specialists, who devote themselves to the research and development of our SCP-NPM exam review questions, If you decide to join us, you just need to spend one or two days to practice SCP-NPM updated study questions and remember the key knowledge of real test, the test will be easy for you, SolarWinds Exam SCP-NPM Guide We help each candidate to pass the exam with best price and highest quality.
