# Valid CWAP-405 Study Guide | Reliable CWAP-405 Exam Voucher

P.S. Free 2026 CWNP CWAP-405 dumps are available on Google Drive shared by TopExamCollection: https://drive.google.com/open?id=1C5G1deEr5dCimWCeK9QZ1SEcWqO9nd2M

Just like the old saying goes, motivation is what gets you started, and habit is what keeps you going. A good habit, especially a good study habit, will have an inestimable effect in help you gain the success. The CWAP-405 Study Materials from our company will offer the help for you to develop your good study habits. If you buy and use our study materials, you will cultivate a good habit in study.

For your information, the passing rate of our CWAP-405 study questions is over 98% up to now. Up to now our CWAP-405 practice materials consist of three versions, all those three basic types are favorites for supporters according to their preference and inclinations. On your way moving towards success, our CWAP-405 Preparation materials will always serves great support. And you can contact us at any time since we are serving online 24/7.

## Reliable CWAP-405 Exam Voucher, Reliable CWAP-405 Exam Papers

In your day-to-day life, things look like same all the time. Sometimes you feel the life is so tired, do the same things again and again every day. Doing the same things and living on the same life make you very bored. So hurry to prepare for CWAP-405 exam, we believe that our CWAP-405 exam braindumps will help you change your present life. It is possible for you to start your new and meaningful life in the near future, if you can pass the CWNP exam and get the certification. So it is very important for you to prepare for the practice exam, you must pay more attention to the CWAP-405 Certification guide to help you.

## CWNP Certified Wireless Analysis Professional Sample Questions (Q40-Q45):

**NEW QUESTION # 40**
A new firmware has been released for the AP model you use in your WLAN. You have more than 120 of these APs installed. What is a good reason for applying a firmware update on an enterprise AP?

- A. Enable the short guard interval
- B. Disable lower data rates
- C. Enable 4x4:4 spatial streams on a 3x3:3 AP
- D. Enable new security features and patch vulnerabilities

**Answer: D**

**NEW QUESTION # 41**

You are concerned about attackers gaining access to your WLAN from outside the facility.
Why does reducing the output power on the APs not provide sufficient certainty that an attacker outside the facility cannot gain access?

- A. Because the attacker will simplify use a lower gain antenna and a radio with higher receive sensitivity
- B. Because the attacker can simply use high gain antennas
- C. Because the attacker can increase the output power of the radio on the client
- D. Because RF signals can be received even when weak if using a Mac OS X computer

**Answer: B**

## NEW QUESTION # 42

What action is taken automatically by 802.11 APs and client STAs as the signal strength of the link weakens in order to improve the quality of the RF communications overall?

- A. RSSI is increased
- B. Data rates are reduced
- C. Antenna gain is increased
- D. Output power is increased

**Answer: B**

## NEW QUESTION # 43

In what scenario is Open Authentication without encryption not allowed based on the 802.11 standard?

- A. When operating a BSS in FIPS mode
- B. When operating a BS5 in the CBRS band
- C. When operating a BSS in the 6 GHz band
- D. When operating a BSS in a government facility

**Answer: C**

Explanation:
Open Authentication without encryption is not allowed when operating a BSS in the 6 GHz band, according to the 802.11 standard. Open Authentication is a type of authentication method that does not require any credentials or security information from a STA (station) to join a BSS (Basic Service Set). Open Authentication can be used with or without encryption, depending on the configuration of the BSS and the STA. Encryption is a technique that scrambles the data frames using an algorithm and a key to prevent unauthorized access or eavesdropping. However, in the 6 GHz band, which is a newly available frequency band for WLANs, Open Authentication without encryption is prohibited by the 802.11 standard, as it poses security and interference risks for other users and services in the band. The 6 GHz band requires all WLANs to use WPA3-Personal or WPA3-Enterprise encryption methods, which are more secure and robust than previous encryption methods such as WPA2 or WEP. The other options are not correct, as they do not describe scenarios where Open Authentication without encryption is not allowed by the 802.11 standard.
When operating a BSS in the CBRS band, which is another newly available frequency band for WLANs, Open Authentication without encryption is allowed, but not recommended, as it also poses security and interference risks for other users and services in the band. When operating a BSS in FIPS mode, which is a mode that complies with the Federal Information Processing Standards for cryptographic security, Open Authentication without encryption is allowed, but not compliant, as it does not meet the FIPS requirements for encryption algorithms and keys. When operating a BSS in a government facility, Open Authentication without encryption is allowed, but not advisable, as it may violate the government policies or regulations for wireless security. ## NEW QUESTION # 44

What interframe space would be expected between a CIS and a Data frame?

- A. PIFS
- B. SIFS
- C. AIFS
- D. DIFS

**Answer: B**

Explanation:
The interframe space that would be expected between a CTS (Clear to Send) and a Data frame is SIFS (Short Interframe Space). A SIFS is the shortest interframe space that is used for high-priority transmissions, such as ACKs (Acknowledgements), CTSs, or data frames that are part of a fragmentation or aggregation process. A SIFS is a fixed value that depends on the PHY type and channel width. A CTS and a Data frame are part of a virtual carrier sense mechanism called RTS/CTS (Request to Send/Clear to Send), which is used to avoid collisions and hidden node problems in wireless transmissions. When a STA (station) wants to send a data frame, it first sends an RTS frame to the intended receiver, indicating the duration of the transmission. The receiver then responds with a CTS frame, also indicating the duration of the transmission. The other STAs in the vicinity hear either the RTS or the CTS frame and update their NAV (Network Allocation Vector) timers accordingly, deferring their access to the medium until the transmission is over. The sender then sends the data frame after waiting for a SIFS, followed by an ACK frame from the receiver after another SIFS. The other options are not correct, as they are not used between a CTS and a Data frame. A PIFS (PCF Interframe Space) is used for medium access by the PCF (Point Coordination Function), which is an optional and rarely implemented polling-based mechanism that provides contention-free service for time-sensitive traffic. An AIFS (Arbitration Interframe Space) is used for medium access by different ACs (Access Categories), which are logical queues that correspond to different QoS (Quality of Service) levels for different types of traffic. An AIFS is a variable interframe space that depends on the AIFSN (Arbitration Interframe Space Number) value of each AC. A DIFS (Distributed Interframe Space) is used for medium access by the DCF (Distributed Coordination Function), which is the default and mandatory contention-based mechanism that provides best- effort service for normal traffic.
