질문 # 26

(What is Machine Learning?)

- A. A technology that equips machines with human-like capabilities such as problem-solving, visual perception, speech recognition, decision-making, and language translation.
- B. A form of deep learning that utilizes foundation models, like large language models, to create new content, including text, images, sound, and videos, based on the data it was trained on.
- C. A subset of AI that focuses on enabling computer systems to learn and improve from experience or data, incorporating elements from fields like computer science, statistics, and psychology.
- D. AI systems that use self-supervised learning on vast data to perform a variety of tasks, such as writing documents or creating images.

정답: C

설명:

Comprehensive and Detailed Explanation From Exact Extract: Machine Learning is defined as a subset of AI that enables computer systems to learn and improve from experience or data, incorporating elements from fields like computer science, statistics, and psychology. This distinguishes it from general AI, generative AI, or foundation models, focusing on data-driven learning without

explicit programming.

Exact extracts supporting this:

"Machine learning is a subset of artificial intelligence (AI) in which computers learn from data and improve with experience without being explicitly programmed."sap.com

"Machine learning (ML) is a subset of AI that enables computer systems to learn and improve from experience or data, and incorporates elements from fields like computer science, statistics, and psychology."sap.com

"Machine learning is a subset of artificial intelligence (AI). It is focused on teaching computers to learn from data and to improve with experience - instead of ..."learning.sap.com Other options are incorrect because:

Option A: This describes foundation models or generative AI systems that use self-supervised learning for multi-task performance, not specifically machine learning.

Option C: This refers to generative AI, a specific application of deep learning using foundation models for content creation.

Option D: This defines artificial intelligence in general, encompassing human-like capabilities beyond just learning from data.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Drawn from the SAP product page "What is Machine Learning?" and the SAP Learning course "Discovering SAP Business AI," which positions machine learning as a foundational subset of AI within SAP Business AI solutions integrated into the SAP Business Suite. Supported by SAP Help Portal glossaries and community blogs, as aligned with C_BCBAI_2502 certification for explaining AI concepts.

질문 # 27

(What are some key differentiators of SAP Business AI? Note: There are 3 correct answers to this question.)

- A. AI Foundation
- B. Predictive Analytics
- C. Embedded AI
- D. Large Foundation Models
- E. Ecosystem of Innovation

정답: A,C,E

설명:

Comprehensive and Detailed Explanation From Exact Extract: Key differentiators of SAP Business AI include embedded AI directly integrated into business applications for seamless use, an AI Foundation providing the underlying infrastructure and tools in SAP BTP, and an Ecosystem of Innovation through partnerships and open standards for collaborative advancements. These set SAP apart by focusing on integration, foundational support, and ecosystem-driven innovation.

Exact extracts supporting this:

Embedded AI: "Embedded AI: Our relevant, reliable, and responsible SAP Business AI is ... key differentiators."learning.sap.com

AI Foundation: "For that, we established an AI foundation."learning.sap.com "SAP's main differentiators are... deep domain and industry expertise."community.sap.com (Foundation as base.) Ecosystem of Innovation: "Maximize the value of AI across your business with a single AI interface that seamlessly integrates data and workflows across your SAP and non-SAP

applications."sap.com Implies ecosystem.

Other options are incorrect because:

Option C: Predictive analytics is a capability but not a key differentiator; focus is on embedded and foundational aspects.

Option D: SAP integrates large foundation models from partners but does not claim them as differentiators; emphasis is on business grounding.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From SAP Learning course "Discovering SAP Business AI," units on market point of view and role of Business AI, highlighting embedded AI, foundation, and ecosystem as differentiators, per C_BCBAI_2502 materials.

질문 # 28

Match the key personas of an organization to the impact of SAP Business AI on their organization.

- A. Chief Human Resources Officer (CHRO) → Enhance hiring, developing employees, and streamlining HR agility
- B. Chief Procurement Officer (CPO) → Improve sourcing, forecasting, disruptions and managing suppliers
- C. Chief Information Officer / CTO (CIO/CTO) → Integrate seamlessly with current technological infrastructure in a secure way
- D. Chief Financial Officer (CFOO) → Improve financial efficiency, forecasting, and managing risk
- E. Chief Operations Officer (CCOO) → Improve process automation and supply chain resilience, and accelerating execution speed

정답: A,B,C,D,E

질문 # 29

(What are some generative AI tools for an SAP Cloud ERP transformation? Note: There are 3 correct answers to this question.)

- A. Integration generator
- B. Extension builder wizard
- C. ABAP Business Object generator
- D. Process automation
- E. Process model generator

정답: C,D,E

설명:

Comprehensive and Detailed Explanation From Exact Extract: Generative AI tools for SAP Cloud ERP transformation include process automation capabilities in SAP Build Process Automation for generating and automating business processes, the process model generator in SAP Signavio for creating process models using AI, and the ABAP Business Object generator in Joule for developing ABAP-based business objects to extend ERP functionalities. These tools facilitate efficient migration, customization, and optimization during cloud ERP transformations by leveraging generative AI to streamline code, processes, and extensions.

Exact extracts supporting this:

Process automation: "SAP Build Process Automation integrates with generative AI to generate and edit business processes, decisions, forms, and script tasks using natural language descriptions."sap.com This supports automation in ERP transformations.

Process model generator: "SAP Signavio uses generative AI to assist in process modeling, recommending performance indicators and generating models based on best practices."learning.sap.com

ABAP Business Object generator: "Joule generates ABAP business objects using the ABAP RESTful Application Programming Model (RAP) for extensions in SAP S/4HANA

Cloud."learning.sap.com "Generative AI in ABAP Cloud includes business object generation."community.sap.com Other options are incorrect because:

Option B: While extension building is simplified with wizards in SAP Build Code, it is not specifically a "generative AI tool" but rather a guided process; generative aspects come from Joule integration.

Option C: Integration generation is supported in SAP BTP, but not highlighted as a distinct generative AI tool for ERP transformation; focus is on code and process generation.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from SAP Learning Journey "Boosting Your Cloud Transformation Journey with SAP Business AI and Generative AI," units on generative AI in SAP Signavio, Build Process Automation, and ABAP Cloud. Supported by SAP Community blogs on generative AI for S/4HANA migration and SAP Help Portal, aligning with C_BCBAI_2502 certification for tools in cloud ERP transformations.

질문 # 30

(Which URL should you use to find reliable information about existing and planned features of Joule quickly?)

- A. <https://roadmaps.sap.com/board?range=FIRST-LAST&q=Joule>
- B. <https://developers.sap.com/board?range=FIRST-LAST&q=Joule>
- C. <https://learning.sap.com/learning-journeys/Joule>
- D. <https://community.sap.com/topics/joule>

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract: The correct URL to quickly find reliable information about existing and planned features of Joule is the SAP Road Map Explorer, as it is the official interactive tool designed for viewing current and future product features and innovations. This aligns with SAP's official resources for product roadmaps, which detail both existing capabilities and planned enhancements for tools like Joule, SAP's generative AI copilot.

Exact extracts supporting this:

From SAP Road Map Explorer description: "The SAP Road Map Explorer is an interactive tool that supports a customer's journey to SAP's future product portfolio and the Intelligent Enterprise."pages.community.sap.com

From a specific Joule roadmap asset: "Preview the road map for the Joule copilot and start planning how to leverage its upcoming enhancements to grow efficiency and engagement across your business."sap.com The URL in option C directly searches the roadmap board for Joule across all time ranges (FIRST-LAST), providing comprehensive details on features.

Other options are incorrect because:

Option A (developers.sap.com) is for developer resources, tutorials, and boards, not specifically for product roadmaps or planned features.
 Option B (learning.sap.com) focuses on learning journeys and educational content, such as courses on using Joule, but not on feature roadmaps.
 Option D (community.sap.com) is a discussion forum for user topics and experiences, which may not provide official, reliable roadmap information.
