NEW QUESTION # 344

SIMULATION

You plan to connect several Windows servers to the WS11641655 Azure Log Analytics workspace.

You need to ensure that the events in the System event logs are collected automatically to the workspace after you connect the Windows servers.

To complete this task, sign in to the Azure portal and modify the Azure resources.

- A. Azure Monitor can collect events from the Windows event logs or Linux Syslog and performance counters that you specify for longer term analysis and reporting, and take action when a particular condition is detected. Follow these steps to configure collection of events from the Windows system log and Linux Syslog, and several common performance counters to start with.
Data collection from Windows VM
 1. In the Azure portal, locate the WS11641655 Azure Log Analytics workspace then select Advanced settings.
 2. Select Data, and then select Windows Event Logs.
 3. You add an event log by typing in the name of the log. Type System and then select the plus sign +.
 4. In the table, check the severities Error and Warning. (for this question, select all severities to ensure that ALL logs are collected).
 5. Select Save at the top of the page to save the configuration.
- B. Azure Monitor can collect events from the Windows event logs or Linux Syslog and performance counters that you specify for longer term analysis and reporting, and take action when a particular condition is detected. Follow these steps to configure collection of events from the Windows system log and Linux Syslog, and several common performance counters to start with.
Data collection from Windows VM
 1. In the Azure portal, locate the WS11641655 Azure Log Analytics workspace then select Advanced settings.
 - ☐
 2. Select Data, and then select Windows Event Logs.
 3. You add an event log by typing in the name of the log. Type System and then select the plus sign +.
 4. In the table, check the severities Error and Warning. (for this question, select all severities to ensure that ALL logs are collected).
 5. Select Save at the top of the page to save the configuration.

Answer: B

NEW QUESTION # 345

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Azure Username: User1-10598168@ExamUsers.com

Azure Password: Ag1Bh9!#Bd

The following information is for technical support purposes only:

Lab Instance: 10598168

☐

You need to create a new Azure Active Directory (Azure AD) directory named 10598168.onmicrosoft.com.

The new directory must contain a user named user1@10598168.onmicrosoft.com who is configured to sign in by using Azure Multi-Factor Authentication (MFA).

To complete this task, sign in to the Azure portal.

Answer:

Explanation:

See the explanation below.

Explanation

Step 1: Create an Azure Active Directory tenant

1. Browse to the Azure portal and sign in with an account that has an Azure subscription.

2. Select the plus icon (+) and search for Azure Active Directory.

☐ 3. Select Azure Active Directory in the search results.

☐ 4. Select Create.

☐ 5. Provide an Organization name and an Initial domain name (10598168). Then select Create. Your directory is created.

6. After directory creation is complete, select the information box to manage your new directory. Next, you're going to add tenant users.

Step 2: Create an Azure Active Directory tenant user

7. In the Azure portal, make sure you are on the Azure Active Directory fly out.

☐

8. Under Manage, select Users.

9. Select All users and then select + New user.

10. Provide a Name and User name (user1) for the regular user tenant. You can also show the temporary password. When you're done, select Create.

Name: user1

User name: user1@10598168.onmicrosoft.com

☐

NEW QUESTION # 346

You have an Azure subscription that contains a storage account named storage1 and several virtual machines. The storage account and virtual machines are in the same Azure region. The network configurations of the virtual machines are shown in the following table.

☐ The virtual network subnets have service endpoints defined as shown in the following table.

☐ You configure the following Firewall and virtual networks settings for storage1:

Allow access from: Selected networks

Virtual networks: VNET3\Subnet3

Firewall - Address range: 52.233.129.0/24

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

NEW QUESTION # 347

.....
