Development-Lifecycle-and-Deployment-Architect Latest Exam Materials, Guide Development-Lifecycle-and-Deployment-Architect Torrent

You will never know what kind of people you will be and what kind of future is waiting for you if you don't try your best to pursue. And our Development-Lifecycle-and-Deployment-Architect learning prep can be one of your challenge. Also your potential will be fully realized with the guidance of our Development-Lifecycle-and-Deployment-Architect Exam Questions. It is a good chance for you to improve yourself. We are looking forward that you can choose our Development-Lifecycle-and-Deployment-Architect study materials. It is up to you. Time and tides wait for no man. Come to purchase our Development-Lifecycle-and-Deployment-Architect practice braindumps.

Salesforce Development-Lifecycle-and-Deployment-Architect Exam is a valuable certification for professionals who work in the Salesforce ecosystem. It provides a comprehensive understanding of Salesforce development methodologies and best practices, and validates the skills and knowledge required to manage the development lifecycle of Salesforce applications.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q87-Q92):

NEW QUESTION # 87

Universal Containers (UC) has recently acquired other companies that have their own Salesforce orgs. These companies have been merged as new UC business units.

The CEO has requested an architect to review the org strategy, taking into consideration two main factors:

- * The CEO wants business process standardization among all business units.
- * Business process integration is not required as the different business units have different customers and expertise.

Which org strategy should the architect recommend in this scenario, and why?

- A. Single-org strategy, as costs increase as the number of orgs go up.
- B. Single-org strategy, as the high level of business process standardization will be easier to implement in a single org.
- C. Multi-org strategy, as it is uncommon for the diversified business units to get used to working in the same space as the other business units.
- D. A Multi-org strategy, as they could deploy a common managed package into the orgs of the different business units.

Answer: D

NEW QUESTION # 88

In architect is working on a project that relies on functionality that cannot be deployed via the Metadata API. What is the best practice for making sure these components are deployed successfully?

- A. Utilize the metadata API's deployAllComponents call
- B. Document deployment steps for any components that cannot be automatically deployed
- C. Generate and install a managed package that enables the required settings
- D. Generate and deploy a change set that enables the required settings

Answer: B

NEW QUESTION # 89

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning. Which two decisions should the Architect make when planning for releases? Choose 2 answers

- A. When to test a new UC feature release if there are issues.
- B. Whether Salesforce will wait to upgrade the pod until after a UC release is complete.
- C. How to roll back to the previous Salesforce release if there are issues.
- D. How to test existing functionality to ensure no regressions are introduced.

Answer: A,D

Explanation:

How to test existing functionality to ensure no regressions are introduced is a decision that the Architect should make when planning for releases, as it is part of the quality assurance process and helps to ensure that the new changes do not break the existing functionality. When to test a new UC feature release is also a decision that the Architect should make when planning for releases, as it is part of the release schedule and helps to coordinate the testing activities with the development and deployment activities.

Whether Salesforce will wait to upgrade the pod until after a UC release is complete is not a decision that the Architect can make, as it is determined by Salesforce and depends on the release window and the pod assignment. How to roll back to the previous Salesforce release if there are issues is not a decision that the Architect can make, as it is not possible to roll back to a previous Salesforce release once the upgrade is done.

NEW QUESTION # 90

Universal Containers (UC) has integrated with their on-premise billing system using Salesforce Connect. The data is configured using an External Object in sandbox. UC wants to deploy the external object to production using the Metadata API and would like to know what Metadata types to choose for deployments to production. Which two options are valid metadata types related to deployment of external objects? Choose 2 answers.

- A. In change sets, external objects are included in the External Object component.
- B. In the Metadata API, the External Object metadata type represents external objects.
- C. In change sets, external objects are included in the custom object component.
- D. In the Metadata API, the Custom Object metadata type represents external objects.

Answer: B,D

Explanation:

In the Metadata API, the External Object metadata type represents external objects. In the Metadata API, the Custom Object metadata type represents external objects.

NEW QUESTION # 91

Universal Containers (UC) is using Salesforce for their sales organization. The sales users have created several dashboards using multiple running users. The admins have also added a few workflow rules that send email notifications to some sales users. What should an Architect consider while planning the deployment of such components? Choose 2 answers

- A. User fields are ignored during metadata deployments and all such users need to be manually created in the target org before starting the deployment.
- B. If the username in the source org doesn't exist in the target org, the deployment will stop until the usernames are resolved or removed.
- C. User Fields are preserved during metadata deployments and Salesforce attempts to locate a matching user in the target org during deployment.
- D. If the username in the source org doesn't exist in the target org, the deployment will continue and Salesforce will automatically create the username in the target org.

Answer: B,C

Explanation:

User fields are preserved during metadata deployments and Salesforce attempts to locate a matching user in the target org during deployment. If the username in the source org doesn't exist in the target org, the deployment will stop until the usernames are resolved or removed.

NEW QUESTION # 92

.....

We become successful lies on the professional expert team we possess, who engage themselves in the research and development of our Development-Lifecycle-and-Deployment-Architect learning guide for many years. So we can guarantee that our Development-Lifecycle-and-Deployment-Architect exam materials are the best reviewing material. Concentrated all our energies on the study Development-Lifecycle-and-Deployment-Architect learning guide we never change the goal of helping candidates pass the exam. Our Development-Lifecycle-and-Deployment-Architect test questions' quality is guaranteed by our experts' hard work. So what are you waiting for? Just choose our Development-Lifecycle-and-Deployment-Architect exam materials, and you won't be regret.
