(HCTA0-003) (Terraform-Associate-003) questions with you at all times.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q99-Q104):

NEW QUESTION # 99

Which configuration consistency errors does terraform validate report?

- A. A mix of spaces and tabs in configuration files
- B. Terraform module isn't the latest version
- C. Differences between local and remote state
- **D. Declaring a resource identifier more than once**

Answer: D

Explanation:

Terraform validate reports configuration consistency errors, such as declaring a resource identifier more than once. This means that the same resource type and name combination is used for multiple resource blocks, which is not allowed in Terraform. For example, resource "aws_instance" "example" {...} cannot be used more than once in the same configuration. Terraform validate does not report errors related to module versions, state differences, or formatting issues, as these are not relevant for checking the configuration syntax and structure. Reference = [Validate Configuration], [Resource Syntax]

NEW QUESTION # 100

Which are forbidden actions when the terraform state file is locked? Choose three correct answers.

- **A. Terraform apply**
- B. Terraform state list
- C. Terraform for
- **D. Terraform destroy**
- E. Terraform validate
- **F. Terraform validate**

Answer: A,D,F

Explanation:

The terraform state file is locked when a Terraform operation that could write state is in progress. This prevents concurrent state operations that could corrupt the state. The forbidden actions when the state file is locked are those that could write state, such as terraform apply, terraform destroy, terraform refresh, terraform taint, terraform untaint, terraform import, and terraform state *. The terraform validate command is also forbidden, because it requires an initialized working directory with the state file. The allowed actions when the state file is locked are those that only read state, such as terraform plan, terraform show, terraform output, and terraform console. Reference = [State Locking] and [Command: validate]

NEW QUESTION # 101

A terraform apply can not _____ infrastructure.

- A. change
- B. provision
- C. destroy
- **D. import**

Answer: D

Explanation:

Explanation

The terraform import command is used to import existing infrastructure into Terraform's state. This allows Terraform to manage and destroy the imported infrastructure as part of the configuration. The terraform import command does not modify the configuration, so the imported resources must be manually added to the configuration after the import. References = [Importing Infrastructure]

NEW QUESTION # 102

Your DevOps team is currently using the local backend for your Terraform configuration. You would like to move to a remote backend to store the state file in a central location. Which of the following backends would not work?

- A. Terraform Cloud
- **B. Git**
- C. Amazon S3
- D. Artifactory

Answer: B

Explanation:

Explanation

This is not a valid backend for Terraform, as it does not support locking or versioning of state files⁴. The other options are valid backends that can store state files in a central location.

NEW QUESTION # 103

You have deployed a new webapp with a public IP address on a cloud provider. However, you did not create any outputs for your code. What is the best method to quickly find the IP address of the resource you deployed?

- A. In a new folder, use the terraform_remote_state data source to load in the state file, then write an output for each resource that you find the state file
- **B. Run terraform state list to find the name of the resource, then terraform state show to find the attributes including public IP address**
- C. Run terraform output ip_address to view the result
- D. Run terraform destroy then terraform apply and look for the IP address in stdout

Answer: B

Explanation:

This is a quick way to inspect the state file and find the information you need without modifying anything⁵.

The other options are either incorrect or inefficient.

NEW QUESTION # 104

.....

In this Desktop-based HashiCorp Terraform-Associate-003 practice exam software, you will enjoy the opportunity to self-exam your preparation. The chance to customize the HashiCorp Terraform-Associate-003 practice exams according to the time and types of HashiCorp Terraform-Associate-003 practice test questions will contribute to your ease. This format operates only on Windows-based devices. But what is helpful is that it functions without an active internet connection. It copies the exact pattern and style of the real HashiCorp Terraform-Associate-003 Exam to make your preparation productive and relevant.
