EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Reduces required maintenance time for IT resources
- **B. Maximizes application and information availability**
- C. Avoids security risks that expose business data
- D. Reduces the cost of protecting data

Answer: B

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

- * Local failures(disk, server, or site outages)
- * Natural disasters(floods, fires)
- * Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.

NEW QUESTION # 15

Question:

An IT team needs to reduce or eliminate data frame loss during times of network congestion in their converged Ethernet network.

What standard should they implement?

- A. QoS
- **B. DCB**
- C. VLAN
- D. NAT

Answer: B

Explanation:

Data Center Bridging (DCB) is a set of IEEE standards designed to enhance Ethernet for converged data center networks.

DCB includes priority-based flow control (PFC) to reduce frame loss during congestion.

Ensures lossless Ethernet transport, crucial for storage traffic (like FCoE).

- * QoS (A) prioritizes traffic but doesn't guarantee lossless transport.
- * NAT (C) translates IP addresses, not relevant to lossless transport.
- * VLAN (D) segments networks logically but doesn't address congestion.

NEW QUESTION # 16

Question:

What is the most common technique used by malware protection software to detect malware?

- A. Reputation-based analysis
- B. Heuristic analysis
- **C. Signature-based detection**
- D. Behavioral analysis

Answer: C

Explanation:

Signature-based detection is the most common method of malware detection. It works by comparing files and data to a database of known malware signatures:

Fast and efficient for known threats.

Updated regularly by security vendors.

* Reputation-based: Looks at the trustworthiness of files/domains.

* Behavioral: Monitors actions and identifies suspicious patterns.

* Heuristic: Detects new malware based on file behaviors and patterns, useful for unknown threats.

NEW QUESTION # 17

Question:

In traditional provisioning, which two factors determine the availability, capacity, and performance of the RAID set?

- A. Make of drives
- **B. The RAID level**

- C. The number of drives in the RAID set
- D. Capacity of drives

Answer: B,C

Explanation:

In traditional storage provisioning, the RAID configuration significantly impacts the storage system's characteristics:

- * RAID Level: Determines data redundancy and fault tolerance. For example, RAID 1 mirrors data, providing high availability, while RAID 5 uses parity, balancing performance and redundancy.
- * Number of Drives: Affects both capacity and performance. More drives can increase total storage capacity and improve performance through parallel data access.
- * Make of Drives: While drive quality matters, it's less influential than RAID configuration in determining overall system characteristics.
- * Capacity of Drives: Impacts total storage size but doesn't directly influence performance or availability as significantly as RAID level and drive count.

NEW QUESTION # 18

Question:

A company is concerned about unauthorized access to its sensitive data. They want to implement security measures to ensure that only authorized users can access the data. Which goal of information security are they primarily addressing?

- A. Accountability
- B. Confidentiality
- C. Availability
- D. Integrity

Answer: B

Explanation:

Confidentiality ensures that sensitive data is only accessible to authorized users. This is a primary goal of information security, achieved by:

- * Access controls(authentication, authorization)
- * Encryption to protect data in transit and at rest
- * Monitoring and auditing to detect unauthorized access
- * Availability: Ensuring data/services are accessible when needed.
- * Accountability: Tracking actions of users (audit trails).
- * Integrity: Protecting data from unauthorized modification.
