Real Salesforce Development-Lifecycle-and-Deployment-Architect Dumps Attempt the Exam in the Optimal Way

Our Development-Lifecycle-and-Deployment-Architect practice questions are carfully compiled by our professional experts to be sold all over the world. So the content should be easy to be understood. The difficult questions of the Development-Lifecycle-and-Deployment-Architect exam materials will have vivid explanations. So you will have a better understanding after you carefully see the explanations. At the same time, our Development-Lifecycle-and-Deployment-Architect Real Exam just needs to cost you a few spare time. After about twenty to thirty hours' practice, you can completely master all knowledge.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q218-Q223):

NEW QUESTION # 218
Universal Containers CUC) is looking for advice on how often it should refresh its sandboxes. UC currently uses a development Mfecycle that starts with developer environments and moves to integration testing, QA testing, UAT, and then production. They have many scrum teams working concurrently and the teams do not agree on when refreshes should occur.
What two recommendations should the architect suggest?
Choose 2 answers

- A. Production is the only pristine environment.

- B. Sandboxes should be refreshed on the day when the refresh is allowed for that type of sandbox.
- C. Development environments should generally be refreshed after each working feature has been successfully migrated.
- D. Integration sandboxes should be refreshed rarely because of the burden of maintaining the various API.

Answer: A,D

NEW QUESTION # 219
Which are the two key benefits of fully integrating an agile issue tracker with software testing and continuous integration tools?
Choose 2 answers?

- A. Developers can see automated test statuses that commit on a specific user story.
- B. Developers can collaborate and communicate effectively on specific user stories.
- C. Developers can use the committed code's build status directly on the user story record.
- D. Developers can observe their team velocity on the burn chart report in the agile tool.

Answer: A,C

Explanation:
Explanation
Integrating an agile issue tracker with software testing and continuous integration tools can provide the following benefits:
Developers can see automated test statuses that commit on a specific user story, which can help them identify and fix any errors or failures quickly.
Developers can use the committed code's build status directly on the user story record, which can help them track the progress and quality of their work.

NEW QUESTION # 220
Since Universal Containers (UC) has adopted agile methodologies, the CEO is requesting the development teams to deliver more and more work in shorter time frames. The CTO responds by saying the developers are not able to deliver the jobs they are committing to.
What evidence can be gathered in an agile tool to support the CTO's claims?

- A. A burndown chart showing team finishes early sprint after sprint
- B. A burndown chart showing the team misses their forecast sprint after sprint
- C. The definition of done (DoD)
- D. A Kanban board showing there's always the maximum allowed amount of work in progress (WIP)

Answer: B

Explanation:
Explanation
The evidence that can support the CTO's claims is a burndown chart showing the team misses their forecast sprint after sprint. This indicates that the team is overcommitting and not able to deliver the work they planned. The definition of done, the Kanban board, and the burndown chart showing the team finishes early are not relevant to the CTO's claims, as they do not reflect the actual progress and performance of the team.

NEW QUESTION # 221
Universal Containers has a complex deployment coming up. The deployment will include several Apex classes which depend on custom settings that hold important configuration. How should an Architect manage this deployment?

- A. Create a custom metadata type and include this in your deployment to production
- B. Script the deployment of all functionality via the Force.com Migration Tool
- C. Manually deploy and populate custom settings in production using a change set
- D. Manually deploy and populate the custom settings in production prior to the Apex Class deployment

Answer: A

NEW QUESTION # 222

Universal Containers has 80% code coverage. Despite the creation of a test plan for each sprint, the number of defects is large.
What two items should the architect recommend to reduce defects?
Choose 2 answers

- A. The test script should be used to define the test classes.
- B. The code coverage should be increased to 95%.
- C. The test analyst who creates the test plan must also create the test classes.
- D. The acceptance criteria should have more details.

Answer: A,D

NEW QUESTION # 223

......

The learners' learning conditions are varied and many of them may have no access to the internet to learn our Development-Lifecycle-and-Deployment-Architect study question. If the learners leave home or their companies they can't link the internet to learn our Development-Lifecycle-and-Deployment-Architect test pdf. But you use our APP online version you can learn offline. If only you use the Development-Lifecycle-and-Deployment-Architect study question in the environment of being online for the first time you can use them offline later. So it will be very convenient for every learner because they won't worry about anywhere to learn our Development-Lifecycle-and-Deployment-Architect exam practice materials.
