

# NEW Microsoft GH-900 DUMPS (PDF) AVAILABLE FOR INSTANT DOWNLOAD [2026]

P.S. Free 2026 Microsoft GH-900 dumps are available on Google Drive shared by ValidExam: [https://drive.google.com/open?id=160bHaYN7kg091Ncy4rg\\_S00qw73NiSb2](https://drive.google.com/open?id=160bHaYN7kg091Ncy4rg_S00qw73NiSb2)

Using our GH-900 study braindumps, you will find you can learn about the knowledge of your exam in a short time. Because you just need to spend twenty to thirty hours on the practice exam, our Microsoft GH-900 Study Materials will help you learn about all knowledge, you will successfully pass the Microsoft GH-900 exam and get your certificate.

## Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI</li><li>• CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.</li> </ul>

## GH-900 Certified & Sample GH-900 Questions Pdf

All GH-900 exam questions are available at an affordable cost and fulfill all your training needs. ValidExam knows that applicants of the Microsoft GH-900 examination are different from each other. Each candidate has different study styles and that's why we offer our Microsoft GH-900 product in three formats. These formats are GH-900 PDF, desktop practice test software, and web-based practice exam.

### Microsoft GitHub Foundations Sample Questions (Q15-Q20):

#### NEW QUESTION # 15

What is the primary purpose of creating a security policy in a repository?

- A. To customize the repository's Dependabot configuration
- B. To ensure that peer code review occurs before new changes are merged
- C. To define which types of secrets are blocked with push protection
- D. To describe how security vulnerabilities should be responsibly disclosed

**Answer: D**

Explanation:

The primary purpose of creating a security policy in a GitHub repository is to guide users and contributors on how to report security vulnerabilities in a responsible and secure manner. This policy outlines the preferred method of communication, timelines, and any other pertinent information related to handling security issues.

Security Policy:

Option C is correct because a security policy provides guidelines for responsibly disclosing security vulnerabilities. This helps maintainers respond to and address security concerns promptly and securely, thereby protecting the project and its users.

Incorrect Options:

Option A is incorrect because ensuring peer code review is a best practice for code quality, but it is not the primary purpose of a security policy.

Option B is incorrect because push protection for secrets is managed through repository settings, not the security policy.

Option D is incorrect because customizing Dependabot configuration is related to dependency management, not directly to security policies.

GitHub Docs: Adding a Security Policy to Your Repository

#### NEW QUESTION # 16

Which of the following is the purpose of a GitHub repository?

- A. To provide a collaborative space where developers can share and manage code files, track changes, and store revision history
- B. To provide a folder that stores project files, including documentation, on your local machine
- C. To provide a cloud-based hosting service for project documentation, providing a secure and centralized location for file storage

- D. To provide a version control system designed for small projects, offering simple tools for organizing files on your laptop

**Answer: A**

Explanation:

A GitHub repository serves as a collaborative space where developers can share and manage code files, track changes, and store revision history. It is much more than just a folder or simple tool; it is a comprehensive version control system that allows teams to collaborate effectively on codebases. Repositories enable developers to work together, manage contributions, review code, and maintain a complete history of every change made to the project.

#### NEW QUESTION # 17

Pull requests can only be created between two branches that are:

- A. Different.
- B. The same.
- C. Authored by the same user.
- D. Authored by different users.

**Answer: A**

Explanation:

Pull requests are created to propose changes from one branch to another. These branches must be different; otherwise, there would be no changes to propose. Typically, pull requests are made from a feature or topic branch to a main branch (such as main or master), allowing for code review and integration before the changes are merged.

#### NEW QUESTION # 18

Which of the following best describes cloning a repository?

- A. It imports your source code into a new repository.
- B. It creates a copy of the repository on your local machine.
- C. It retrieves code updates from the remote repository.
- D. It creates a copy of the repository on GitHub.com.

**Answer: B**

Explanation:

Cloning a repository in GitHub refers to creating a copy of the repository on your local machine. This allows you to work on the project offline, make changes, and later push those changes back to the remote repository. It does not involve creating a copy on GitHub.com (which would be forking), retrieving updates (which would be pulling), or importing source code into a new repository (which is done differently).

#### NEW QUESTION # 19

Which of the following best describes GitHub Copilot?

- A. A Visual Studio Code extension for developing AI solutions
- B. An AI pair programmer that offers autocomplete-style suggestions
- C. An AI tool designed to replace software developers
- D. An advanced search tool to intelligently reuse existing code in your projects

**Answer: B**

Explanation:

GitHub Copilot is described as an AI pair programmer that offers autocomplete-style suggestions. It is a tool integrated into development environments like Visual Studio Code that helps developers by providing code suggestions as they type. Copilot can suggest entire lines or blocks of code based on the context of what you're writing, making it a valuable assistant in coding, but not a replacement for developers.
