

# HP HPE7-A11 Exam Prep Material Are Available In Multiple Formats

It is known to us that more and more companies start to pay high attention to the HPE7-A11 certification of the candidates. Because these leaders of company have difficulty in having a deep understanding of these candidates, may it is the best and fast way for all leaders to choose the excellent workers for their company by the HPE7-A11 Certification that the candidates have gained. More and more workers have to spend a lot of time on meeting the challenge of gaining the HPE7-A11 certification by sitting for an exam.

Your final purpose is to get the HPE7-A11 certificate. So it is important to choose good study materials. In fact, our aim is the same with you. Our HPE7-A11 study materials have strong strengths to help you pass the exam. Maybe you still have doubts about our HPE7-A11 exam materials. We have statistics to prove the truth. First of all, our sales volumes are the highest in the market. You can browse our official websites to check our sales volumes. At the same time, many people pass the exam for the first time under the guidance of our HPE7-A11 Practice Exam.

>> HPE7-A11 Valid Guide Files <<

## Pass Guaranteed HP - Efficient HPE7-A11 - HPE Network Campus Access Professional Architect Exam Valid Guide Files

First and foremost, we have high class operation system so we can assure you that you can start to prepare for the HPE7-A11 exam with our study materials only 5 to 10 minutes after payment. Fortunately, you need not to worry about this sort of question any more, since you can find the best solution in this website--our HPE7-A11 Training Materials. With our continued investment in technology, people and facilities, the future of our company has never looked so bright. There are so many advantages of our HPE7-A11 practice test and I would like to give you a brief introduction now.

## HPE Network Campus Access Professional Architect Exam Sample Questions (Q43-Q48):

### NEW QUESTION # 43

ACME retail has 38 locations spread out across Ave US states and two provinces in Canada.

They are looking to grow 20% over the next two years. They have an HO with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location. The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 st) m) and the Canadian warehouse is 130K sq ft (12100 sq m). The forklifts on the loading docks are equipped with a wireless tablet on board. A typical store is reportedly about 60,000 sq ft (5575 sqm) and smaller stores are planned at 25,000 sq ft (2320 sq m). The locations need to expand the abilities to vendors that need to add setup displays or Interactive kiosks in the stores. The current Infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5, and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store. Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current pbx system later this year. With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would like to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half. The office has an MDF and two IDF's located on floors one and two.

The HOF is in the basement, and you have multiple WAN circuits for the HO links. Each store has a local handoff from the cable

company (ethernet) In the middle of the store in the office, so distance for the wiring is not an issue. The customer has budget concerns but does want something that could last 7+ years. What should the architect be concerned about regarding the solution? (Select two.)

- A. Regulatory Domains
- B. Active Directory
- C. IP addresses
- D. multiple locations

**Answer: A,D**

Explanation:

In designing a network solution for ACME Retail, which operates across various regions in the US and Canada, the architect must consider Regulatory Domains and the challenges posed by multiple locations. Regulatory Domains are crucial because wireless standards and allowed frequencies vary by country, affecting how WLAN equipment is configured and deployed.

Compliance with local regulations is essential to avoid legal issues and ensure optimal network performance. The challenge of multiple locations involves ensuring consistent, high-quality network service across all sites, despite geographical distances and site-specific characteristics.

This requires a scalable, flexible network architecture that can be centrally managed while accommodating the unique needs of each location.

#### NEW QUESTION # 44

Which member types require a reboot when doing an In-Service-Software-Upgrade within a VSF stack?

- A. Member
- B. all member types
- C. Conductor
- D. Standby

**Answer: D**

Explanation:

In a Virtual Switching Framework (VSF) stack, the standby member requires a reboot when performing an In-Service Software Upgrade (ISSU). This process allows for the software of the networking devices in the VSF stack to be updated with minimal disruption to the network. The standby member in a VSF configuration is rebooted to apply the new software version while the active member continues to handle the network traffic, ensuring continued operation of the network. This approach minimizes downtime during the upgrade process, which is critical for maintaining network availability and performance.

#### NEW QUESTION # 45

A global cruise line company needs to refresh its current fleet. They will refresh the insides of the ship to be cost-effective and increase their sustain ability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests. Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new internet

connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed. Based on the best practices, what should you recommend as the correct optic type for the connection between the IDF and the cabins?

- A. Aruba 10G LC BiDi 40 km-D 1330/1270 XCVR
- B. Aruba 10GBASE-T SFP- RJ--35 30 m Cat6A Transceiver
- **C. Aruba 106 SFP+ LC SR 300 m MMF Transceiver**
- D. Aruba 106 SFP+ LC LRM 220 m MMF Transceiver

**Answer: C**

Explanation:

For the connection between the IDF and the cabins, which requires supporting distances up to 60 meters on OM2 fiber, the most appropriate optic type is the Aruba 10G SFP+ LC SR 300 m MMF Transceiver. This transceiver is compatible with multi-mode fiber (MMF) and is capable of supporting the required distance for connections to the cabins, making it a suitable choice based on the company's existing cabling structure and the need for 10GbE uplink capabilities to manage increased network traffic. The SR (Short Range) designation indicates that this transceiver is optimized for short to medium distances, which aligns with the maximum 60-meter distance from IDF to cabins, ensuring reliable and high-speed connectivity for the ship's LAN infrastructure within the given physical constraints.

#### **NEW QUESTION # 46**

What is the best practice for using VSX at the core of a 3-tier design?

- A. You should never implement VSX at the core of a 3-tier redundancy core.
- B. VSX-lags allow the collapsed core to connect directly to services such as gateways and services only so long as spanning tree is used to prevent loops.
- C. You should Implement VSX at the core when the aggregation layer operates at layer 2 only.
- **D. You should implement VSX at the core when the aggregation layer is layer 3 only with OSPF- routed traffic forwarding Between the core and aggregation layers.**

**Answer: D**

Explanation:

In a 3-tier network design consisting of core, aggregation, and access layers, the implementation of Virtual Switching Extension (VSX) at the core is considered a best practice when the aggregation layer functions primarily at Layer 3 with routing protocols like OSPF facilitating traffic forwarding between the core and aggregation layers. This design choice, as verified by Aruba Campus Access documents, leverages the high availability and redundancy features of VSX technology while maintaining efficient and scalable routing at the aggregation layer. Implementing VSX at the core in such a scenario ensures seamless failover and redundancy, minimizing the risk of downtime and ensuring consistent performance across the network. The core layer, equipped with VSX, provides a robust and resilient backbone for the network, facilitating efficient traffic management and routing decisions, which is critical for large-scale enterprise networks.

#### **NEW QUESTION # 47**

You are part of a cross-functional team preparing a detailed design proposal for a customer deploying EVPN-VXLAN in a modern campus core and data center fabric. The customer is transitioning from a traditional VLAN-based Layer 2 design to a VXLAN-based overlay architecture to support segmentation scalability, and automation.

As the solution is reviewed, you're asked to contribute by identifying and explaining core technical behaviors and configuration considerations that are critical to the success of EVPN-VXLAN in this environment.

Which statement accurately describe key characteristics of EVPN-VXLAN in modern campus or data center networks? (Choose two.)

- **A. VTEPs apply unique Route Distinguishers prefixes to NLRI records, enabling selective advertising.**
- B. MP-BGP is utilized as the control plane that establishes GRE over UDP between VTEPs. known as VXLAN.
- C. Virtual Network Based Tunneling (VBNT) is a term used to describe static segmentation based on EVPN-VXLAN.
- **D. ARP suppression is supported in EVPN-VXLAN fabrics through host route information carried in EVPN Type-2 NLRI.**

**Answer: A,D**

Explanation:

EVPN-VXLAN uses EVPN Type-2 routes to distribute MAC and IP (host) information, enabling ARP suppression by allowing VTEPs to respond locally without flooding.

Route Distinguishers are applied to EVPN NLRI to ensure uniqueness of routes across different VTEPs and allow proper control plane operation and route advertisement.

## NEW QUESTION # 48

.....

We provide free demo for you to have a try before buying HPE7-A11 exam braindumps. Free demo will help you have a better understanding of what you are going to buy, and we also recommend you try the free demo before buying. Moreover, HPE7-A11 exam braindumps of us will offer you free update for one year, and you can get the latest version of the exam dumps if you choose us. And the update version for HPE7-A11 Exam Dumps will be sent to your email automatically, and you just need to receive them.

**Top HPE7-A11 Questions:** <https://www.lead2passed.com/HP/HPE7-A11-practice-exam-dumps.html>

HP HPE7-A11 Valid Guide Files After confirmation, we will refund you, The HPE7-A11 valid pdfs practice has three versions up to now: PDF & PC test engine & Online test engine, HP HPE7-A11 Valid Guide Files The most important feature is that you don't need to spend too much money to buy, but can obtain them with favorable prices and greater opportunity of passing the exam, I believe that an efficient and reasonable exam pre must help you to pass the HPE7-A11 exam successfully.

Sometimes, the Main Light Is in the Back, Instead, what we want HPE7-A11 to do is we want to try as many different things in fast as the time as possible, After confirmation, we will refund you.

The HPE7-A11 valid pdfs practice has three versions up to now: PDF & PC test engine & Online test engine, The most important feature is that you don't need to spend too much money to Certificate HPE7-A11 Exam buy, but can obtain them with favorable prices and greater opportunity of passing the exam.

## Advantages Of HP HPE7-A11 Practice Test Software

I believe that an efficient and reasonable exam pre must help you to pass the HPE7-A11 exam successfully, Some IT workers feel tired about their job and apply for HPE7-A11 certification as their career breakthrough.

- HPE7-A11 Free Download Pdf  HPE7-A11 High Quality  New HPE7-A11 Test Sample  The page for free download of  HPE7-A11  on [ [www.troytecdumps.com](http://www.troytecdumps.com) ] will open immediately  Valid HPE7-A11 Practice Materials
