NEW QUESTION # 75

A Platform Administrator is designing a prompt template for a new agent. The agent's purpose is to help service reps troubleshoot technical issues by providing concise, step-by-step instructions. Based on best practices for creating effective prompts, which approach should the administrator use when writing this prompt?16

- A. Use natural, easy-to-understand language and clear, concise instructions to guide the AI's behavior.
- B. Focus on providing high-level, theoretical concepts so the AI has the flexibility to respond creatively.
- C. Use specific technical terms and abbreviations to ensure the AI understands the specialised domain.
- D. Write a detailed prompt with multiple nested conditions to cover all the major troubleshooting scenarios.

Answer: A

Explanation:

Creating effective Agentforce prompts requires a focus on clarity and simplicity to ensure the Large Language Model (LLM) follows instructions accurately. According to Salesforce best practices, administrators should use natural, easy-to-understand language and provide clear, concise instructions1919. This approach helps the AI accurately reason through the task without becoming confused

by overly complex or nested logic (Option A). While technical accuracy is important, relying heavily on jargon or abbreviations (Option B) can sometimes lead to unexpected results if the LLM interprets those terms differently in various contexts. Furthermore, providing high-level theoretical concepts (Option C) often results in vague or "creative" answers that may not be helpful for technical troubleshooting, which requires specific and actionable steps²². Using direct instructions like "Summarize the issue in three bullet points" is more effective than broad guidelines.

NEW QUESTION # 76

Is the DataLoader Cloud based?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 77

Cloud Kicks (CK) needs a new sales application. The administrator there is an application package on the AppExchange and wants to begin testing it in a sandbox to see if it addresses CK's needs.

What are two considerations when installing a managed package in a sandbox?

Choose 2 answers.

- A. Install for Admins Only will be the only Install option available.
- B. The package will be removed any time the sandbox is refreshed.
- C. Any metadata changes to the package have to be recreated in production.
- D. The installation link has to be modified to test.salesiorcc.com.

Answer: A,D

Explanation:

Two considerations when installing a managed package in a sandbox are:

* The installation link has to be modified to test.salesforce.com, because the default installation link points to login.salesforce.com which is for production orgs. To install a package in a sandbox org, the administrator has to replace login with test in the installation URL before clicking it.

* The package will be removed any time the sandbox is refreshed, because refreshing a sandbox replaces its current data and metadata with those from its source org. If the source org does not have the package

* installed, then the sandbox will lose it after refresh. Any metadata changes to the package do not have to be recreated in production, because they are preserved during upgrades unless overwritten by the package developer. Install for Admins Only is not the only install option available; there are also Install for All Users and Install for Specific Profiles options. References:
