Desktop-based PT0-003 practice exam software is the first format that TestPassKing provides to its customers. It helps track the progress of the candidate from beginning to end and provides a progress report that is easily accessible. This CompTIA PT0-003 Practice Questions is customizable and mimics the real PT0-003 exam, with the same format, and is easy to use on Windows-based computers. The product support staff is available to assist with any issues that may arise.

TestPassKing also has a CompTIA Practice Test engine that can be used to simulate the genuine PT0-003 exam. This online practice test engine allows you to answer questions in a simulated environment, giving you a better understanding of the exam's structure and format. With the help of this tool, you may better prepare for the CompTIA PenTest+ Exam (PT0-003) test.

You will also improve your time management abilities by using PT0-003 Practice Test software. You will not face any problems in the final PT0-003 exam. This is very important for your career. And this TestPassKing offers 365 days updates. The price is affordable. You can download it conveniently

CompTIA PT0-003 Exam Syllabus Topics:

Topic	Details
Topic 1	• Engagement Management: In this topic, cybersecurity analysts learn about pre-engagement activities, collaboration, and communication in a penetration testing environment. The topic covers testing frameworks, methodologies, and penetration test reports. It also explains how to analyze findings and recommend remediation effectively within reports, crucial for real-world testing scenarios.
Topic 2	• Post-exploitation and Lateral Movement: Cybersecurity analysts will gain skills in establishing and maintaining persistence within a system. This topic also covers lateral movement within an environment and introduces concepts of staging and exfiltration. Lastly, it highlights cleanup and restoration activities, ensuring analysts understand the post-exploitation phase’s responsibilities.
Topic 3	• Vulnerability Discovery and Analysis: In this section, cybersecurity analysts will learn various techniques to discover vulnerabilities. Analysts will also analyze data from reconnaissance, scanning, and enumeration phases to identify threats. Additionally, it covers physical security concepts, enabling analysts to understand security gaps beyond just the digital landscape.

Topic 4	- Attacks and Exploits: This extensive topic trains cybersecurity analysts to analyze data and prioritize attacks. Analysts will learn how to conduct network, authentication, host-based, web application, cloud, wireless, and social engineering attacks using appropriate tools. Understanding specialized systems and automating attacks with scripting will also be emphasized.
Topic 5	- Reconnaissance and Enumeration: This topic focuses on applying information gathering and enumeration techniques. Cybersecurity analysts will learn how to modify scripts for reconnaissance and enumeration purposes. They will also understand which tools to use for these stages, essential for gathering crucial information before performing deeper penetration tests.

CompTIA PenTest+ Exam Sample Questions (Q144-Q149):

NEW QUESTION # 144
During a penetration test, you gain access to a system with a limited user interface. This machine appears to have access to an isolated network that you would like to port scan.
INSTRUCTIONS
Analyze the code segments to determine which sections are needed to complete a port scanning script.
Drag the appropriate elements into the correct locations to complete the script.
If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

NEW QUESTION # 145
Which of the following is the MOST common vulnerability associated with IoT devices that are directly connected to the Internet?

- A. Susceptibility to DDoS attacks
- B. Inability to network
- C. Unsupported operating systems
- D. The existence of default passwords

Answer: C

NEW QUESTION # 146
A penetration tester conducts reconnaissance for a client's network and identifies the following system of interest:

```
$ nmap -A AppServer1.compita.org
Starting Nmap 7.80 (2023-01-14) on localhost (127.0.0.1) at 2023-08-04 15:32:27 Nmap scan report for
AppServer1.compita.org (192.168.1.100) Host is up (0.001s latency).
Not shown: 999 closed ports
Port State Service
21/tcp open ftp
22/tcp open ssh
23/tcp open telnet
80/tcp open http
135/tcp open msrpc
139/tcp open netbios-ssn
443/tcp open https
445/tcp open microsoft-ds
873/tcp open rsync
```

8080/tcp open http-proxy
8443/tcp open https-alt
9090/tcp open zeus-admin
10000/tcp open snet-sensor-mgmt
The tester notices numerous open ports on the system of interest. Which of the following best describes this system?

- A. A Windows endpoint
- B. An already-compromised system
- C. A honeypot
- D. A Linux server

Answer: C

Explanation:
A honeypot is a decoy system designed to attract attackers by exposing multiple services and vulnerabilities.
Indicators of a honeypot (Option A):
The system has an unusual combination of Windows (SMB, MSRPC) and Linux (Rsync, SSH) services.
It exposes a large number of open ports, which is uncommon for a production server.
Presence of "zeus-admin" (port 9090) suggests intentionally vulnerable services.
Reference: CompTIA PenTest+ PT0-003 Official Study Guide - "Honeypots and Decoys in Reconnaissance" Incorrect options:
Option B (Windows endpoint): Windows would not normally run Rsync (873/tcp) or SSH (22/tcp).
Option C (Linux server): Linux servers typically don't have NetBIOS (139/tcp) or MSRPC (135/tcp).
Option D (Already-compromised system): Although possible, honeypots mimic compromised systems to lure attackers.

NEW QUESTION # 147
During a security assessment, a penetration tester uses a tool to capture plaintext log-in credentials on the communication between a user and an authentication system. The tester wants to use this information for further unauthorized access. Which of the following tools is the tester using?

- A. Wireshark
- B. Burp Suite
- C. Metasploit
- D. Zed Attack Proxy

Answer: A

Explanation:
Wireshark is a network packet analyzer used to capture and analyze network traffic in real-time. During a penetration test, it is often used to inspect unencrypted communication to extract sensitive information like plaintext login credentials. Here's how it works:
Packet Capturing:
Wireshark captures the network packets transmitted over a network interface. If a user logs in through an insecure communication protocol (e.g., HTTP, FTP, or Telnet), the credentials are transmitted in plaintext.
Traffic Filtering:
Using filters (e.g., http, tcp.port == 21), the tester narrows down the relevant traffic to locate the login request and response packets.
Sensitive Data Extraction:
Analyzing the captured packets reveals plaintext credentials in the data payload, such as in HTTP POST requests.
Exploit the Information:
After extracting the plaintext credentials, the tester can attempt unauthorized access to resources using these credentials.

NEW QUESTION # 148
Which of the following is the MOST effective person to validate results from a penetration test?

- A. Team leader
- B. Third party

- C. Chief Information Officer
- D. Client

Answer: A
