

# AD0-E725 Test Certification Cost | Most AD0-E725 Reliable Questions

P.S. Free & New AD0-E725 dumps are available on Google Drive shared by Free4Torrent: <https://drive.google.com/open?id=12tH9ExCpuX0LFIKncAZ6XGV3E9mvrqW>

Our AD0-E725 exam questions can meet your needs to the maximum extent, and our AD0-E725 learning materials are designed to the greatest extent from the customer's point of view. So you don't have to worry about the operational complexity. As soon as you enter the learning interface of our system and start practicing our AD0-E725 Learning Materials on our Windows software, you will find small buttons on the interface. It is very easy and convenient to use and find.

At the Free4Torrent, we guarantee that our customers will receive the best possible AD0-E725 study material to pass the Adobe Commerce Developer Expert (AD0-E725) certification exam with confidence. Joining this site for the AD0-E725 exam preparation would be the greatest solution to the problem of outdated material. The AD0-E725 would assist applicants in preparing for the Adobe AD0-E725 Exam successfully in one go AD0-E725 would provide AD0-E725 candidates with accurate and real Adobe Commerce Developer Expert (AD0-E725) Dumps which are necessary to clear the AD0-E725 test quickly. Students will feel at ease since the content they are provided with is organized rather than dispersed.

## Valid Adobe AD0-E725 Test Certification Cost - AD0-E725 Free Download

Our website aimed to helping you and fully supporting you to pass AD0-E725 actual test with high passing score in your first try. So we prepared top AD0-E725 pdf torrent including the valid questions and answers written by our certified professionals for you. Our AD0-E725 Practice Exam available in three modes, pdf files, and PC test engine and online test engine, which apply to any level of candidates.

## Adobe Commerce Developer Expert Sample Questions (Q38-Q43):

### NEW QUESTION # 38

A Developer needs to set up a message queue topic in Adobe Commerce to asynchronously handle order processing. Which XML file should the Developer use to configure this?

- A. queue\_consumer.xml
- B. queue\_topology.xml
- C. communication.xml

Answer: C

Explanation:

The communication.xml file is used to define message queue topics and link publishers with subscribers. This is required when setting up asynchronous handling for events such as order processing.

B (queue\_topology.xml): Defines queue and exchange structure.

C (queue\_consumer.xml): Defines consumers for queues but does not declare topics.

A is correct: communication.xml is the right file for defining topics.

Reference:

Adobe Commerce DevDocs - communication.xml reference

In Adobe Commerce's Message Queue Framework (MQF), several XML configuration files are used, each with a specific purpose:

communication.xml # Defines message queue topics and the messages they carry.

Topics represent logical channels that connect publishers and consumers.

Example: An order placement event may publish a message to a topic like order.processing.

queue\_topology.xml # Defines the relationship between topics and queues.

Maps a topic to one or more queues.

Specifies routing and exchange bindings.

queue\_consumer.xml # Defines consumers that process messages from queues.

Each consumer is a PHP class responsible for handling a message pulled from a queue.

Since the question specifically asks about setting up a topic (not the routing or consumer), the correct configuration file is communication.xml.

Official Documentation Extracts:

"The communication.xml file defines the messages and topics in the message queue framework."- Adobe Commerce DevDocs:

Message queues configuration

"Use queue\_topology.xml to bind topics to queues and define exchanges."- Message Queues: Topology configuration

"Consumers are defined in queue\_consumer.xml. A consumer listens to a queue and processes incoming messages."- Message Queues: Consumer configuration

### NEW QUESTION # 39

An Adobe Commerce Developer creates a before plugin for the save() method from the Magento\Framework\App\Cache\Proxy class to manipulate cache identifiers and data before it is saved to the cache storage.

An example of the class code is shown below:

```
namespace Magento\Framework\App\Cache;
use Magento\Framework\App\Cache\CacheInterface;
use Magento\Framework\ObjectManager\NoninterceptableInterface;
class Proxy implements
CacheInterface,
NoninterceptableInterface
{
...
public function save($data, $identifier, $tags = [], $lifeTime = null)
{
return $this->getCache()->save($data, $identifier, $tags, $lifeTime);
}
...
}
```

Why is the plugin not working as expected?

- A. The plugin cannot be created for this class.
- B. An after plugin defined for the same function affects the results.
- C. An around plugin defined for the same function prevents the execution.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is A. The plugin cannot be created for this class.

The reason is that Magento\Framework\App\Cache\Proxy implements the NoninterceptableInterface.

\* Any class that implements the NoninterceptableInterface in Magento is excluded from the plugin system.

\* This means no before, after, or around plugins can be applied to methods of such classes.

\* Magento uses this mechanism to protect critical classes (like Proxy classes, Factories, and other infrastructure code) from being intercepted, as doing so could introduce performance or stability issues.

Therefore, the developer's plugin for the save() method does not work, because plugins are not allowed on this class by design. Options B and C are incorrect because:

\* Another plugin (after/around) does not block the execution in this case; the class itself is simply non- interceptable.

Official Documentation Extracts:

\* "Plugins cannot be applied to final classes, final methods, non-public methods, or classes that implement

Magento\Framework\ObjectManager\NoninterceptableInterface."- Adobe Commerce DevDocs: Plugins limitations

\* "Classes implementing NoninterceptableInterface cannot be intercepted. This interface is used to mark classes that must not be extended through the plugin mechanism."- Magento Framework Reference:

NoninterceptableInterface

#### NEW QUESTION # 40

While implementing additional functionality, a Developer needs to modify a class with protected and private methods requiring custom logic. The Developer finds that no other Magento customization, such as plugins, will work.

What should the Developer do in this scenario?

- **A. Use a preference and extend the original class.**
- B. Use an observer to customize data processed by the class.
- C. Use a patch to implement the necessary customizations.

**Answer: A**

Explanation:

If methods are protected or private, plugins cannot be used because they only work with public methods. In this case, the developer should use a class preference to replace the original class with a custom class that extends it.

A (preference) is correct.

B (observer) cannot be used because observers only react to events, not protected/private methods.

C (patch) is not a customization mechanism; data/patches are used for database schema or data updates.

Reference:

Adobe Commerce DevDocs - Preferences

Adobe Commerce DevDocs - Plugins limitations

#### NEW QUESTION # 41

A client wants to calculate tax differently when an order is billed for a range of particular postcodes. They want to implement their own system instead of using a third-party system. The Developer is asked to assist in this task by creating a conditional webhook.

What must be done to achieve this?

- **A. Create a webhooks.xml file and add the rules wanted in the form of a rule node element using the regex operator to catch a range of postcodes.**
- B. Implement a new webhook with a list of postcodes and link it to the original webhook, then advise the client to monitor for the new webhook instead.
- C. Create an after plugin on the webhook class and check for a list of postcodes at the time of processing and return true for certain postcodes.

**Answer: A**

Explanation:

Webhooks in Adobe Commerce can be customized using webhooks.xml, where rules can be defined with conditions, including regex-based filtering. This allows the developer to configure postcodes that trigger specific webhook behavior.

A is not correct: modifying core webhook logic via plugin is not the recommended approach.

C is incorrect: duplicating webhooks is unnecessary when rules can be defined declaratively.

B is correct: webhooks.xml with rule conditions provides the proper solution.

Reference:

Adobe Commerce DevDocs - Webhooks configuration

#### NEW QUESTION # 42

An Adobe Commerce Developer is approached to disable several cron jobs from a customization completed by a third-party agency. The cron jobs will eventually be enabled again once a code review of the cron jobs is complete.

Using best principles, how should the Developer action this request?

- A. Edit the schedule with a date which will never happen in the crontab.xml file.
- B. Add the disabled="true" to the <job> node in the crontab.xml file.
- C. Add the schedule="\* \* \* \* \*" to the <job> node in the crontab.xml file.

**Answer: A**

### NEW QUESTION # 43

.....

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our AD0-E725 actual exam can help you out. Our AD0-E725 learning guide always boast a pass rate as high as 98% to 100%, which is unique and unmatched in the market. Using our AD0-E725 Study Materials can also save your time in the exam preparation for the content is all the keypoints covered.
