Topic 4	<ul style="list-style-type: none"> <li>• Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li> </ul>

## Appian Senior Developer Sample Questions (Q74-Q79):

### NEW QUESTION # 74

You need to relate two entities, Employee and Skill, in the data structure. You want to adhere to Appian best practices.

Employees can have multiple skills, and a single skill can relate to multiple employees.

What type of relationship do these entities represent, and what is the minimum number of tables required to implement the design?

- A. One-to-many; 2 tables
- B. Many-to-many; 2 tables
- C. Many-to-many; 3 tables

**Answer: C**

Explanation:

The relationship between Employee and Skill is many-to-many - an employee can have multiple skills, and each skill can belong to multiple employees.

To model this properly and according to Appian best practices, you need 3 tables:

Employee table

appian

Skill table

prep4sureview.com

appian

EmployeeSkill (junction/association) table - contains foreign keys referencing both Employee and Skill to manage the many-to-many relationship.

#### NEW QUESTION # 75

You're in the process of deploying a package to the client's TEST environment at the end of a sprint. This package is only relating to changes to a single application.

Which two statements best describes the practices you should follow for automated testing for expression rules either before or after deploying the package? (Choose two.)

- A. During Compare and Deploy, the Inspect Deployment tab automatically runs the test cases in each of the expression rules.

Review these findings, and either adjust the expression rule or delete outdated test cases.

- B. After deploying the package, you should perform regression testing by running the Start Rule Tests (All) smart service to automatically run the test cases. This indicates whether there are any impacts caused by the changes across multiple applications.
- C. After deploying the package, you should perform regression testing by running the Start Rule Tests (Applications) smart service to automatically run the test cases. This indicates whether there are any impacts caused by changes to the application.
- D. Before using Compare and Deploy, individually evaluate the test cases in the expression rules you intend to deploy. For any failed test case, adjust the expression rule so that it passes.

**Answer: C,D**

Explanation:

Individually evaluating and fixing expression rule test cases before deployment ensures the new package does not introduce errors. Running regression tests after deployment using the Start Rule Tests (Applications) smart service validates that the deployed changes did not negatively impact the application.

#### NEW QUESTION # 76

You're the administrator of your insurance company's case management system. You need to limit insurance agents to only those clients to which they have been assigned.

Which two statements must be true for one way to configure Record-Level security for the Customer record?

(Choose two.)

- A. Data sync should be enabled.
- B. A condition should be added to the record-level security rule to specify which cases specifically named agents can access.
- C. A new record-level security rule should be created using the Users found in fields option to specify that if a user is found in the "assignedAgent" field (which is a type User), then they can see their cases.
- D. Record-level security means agents must have permission to view the record type and permission to edit the records.

**Answer: B,C**

Explanation:

Creating a record-level security rule using the "Users found in fields" option ensures agents only see records assigned to them through the "assignedAgent" field.

Adding a condition to the rule further refines which records (cases) each agent can access, implementing precise record-level security.

#### NEW QUESTION # 77

The synced record type Customer has a one-to-many relationship with the Case record type.

You need to calculate the number of open cases for each customer.

What are two valid methods to accomplish this? (Choose two.)

- A. Create a sync-time custom record field within the Customer record. Utilize the `a!relatedRecordData()` function to filter open cases and count the number of entries.
- B. Within the Case record type, edit the relationship to the Customer record and select the "Open" status as the grouping filter.
- C. Create a query expression for the Customer record type. Utilize the `a!measure()` function within the aggregation fields to count the related cases in the "Open" status.
- D. Within the Customer record type, create a custom field that evaluates in real-time to aggregate related record fields and count the open cases.

**Answer: A,D**

Explanation:

A real-time custom field in the Customer record type can aggregate and count related open cases.

A sync-time custom record field using `a!relatedRecordData()` can filter and count open cases, making the count available as a synced field.

#### NEW QUESTION # 78

You're developing a user input form for a financial services application.

One component of this form requires you to embed an external site (in the form of a URL) that can receive inputs from Appian and return updates as the user interacts with it.

What should you do?

- A. Use a component plug-in to achieve interaction with the embedded site, because this use case requires input-output or event parameters.
- B. Use an integration to achieve interaction with the embedded site while displaying information in the Appian out-of-the-box Web Content Component. That way you can refresh for updates and interact with the site.
- C. Use the Appian out-of-the-box Web Content Component. It can display content from a URL and provide both additional inputs, or receive updates as the user interacts with the embedded site.

**Answer: A**

Explanation:

A component plug-in is required because the standard Web Content Component in Appian only displays external sites and does not support direct two-way interaction or input/output event handling. A plug-in enables custom integration to allow input and receive updates as users interact with the embedded site.

## NEW QUESTION # 79

.....

It can be said that all the content of the ACD201 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the ACD201 Study Materials provide questions and answers, you can simply pass the exam.
