NEW QUESTION # 35

In a FortiSASE secure web gateway (SWG) deployment, which two features protect against web-based threats? (Choose two.)

- A. intrusion prevention system (IPS) for web traffic
- **B. SSL deep inspection for encrypted web traffic**
- C. web application firewall (WAF) for web applications
- **D. malware protection with sandboxing capabilities**

Answer: B,D

Explanation:

SSL deep inspection allows FortiSASE to analyze encrypted web traffic for threats, while malware protection with sandboxing detects and blocks malicious files delivered through web channels.

NEW QUESTION # 36

Refer to the exhibit.

While reviewing the traffic logs, the FortiSASE administrator notices that the usernames are showing random characters. Why are the usernames showing random characters?

- A. Users are using a shared single sign-on SSO username.
- B. Special characters are used in usernames.
- **C. Log anonymization is turned on to hash usernames.**

- D. FortiSASE uses FortiClient unique identifiers for usernames.

Answer: C

Explanation:

The usernames appear as random character strings because log anonymization is enabled in FortiSASE, which hashes sensitive user information such as usernames to protect privacy while still allowing log analysis.

NEW QUESTION # 37

Which secure internet access (SIA) use case minimizes individual endpoint configuration?

- A. Agentless remote user internet access
- B. SIA for FortiClient agent remote users
- C. Site-based remote user internet access
- D. SIA using ZTNA

Answer: C

Explanation:

Site-based remote user internet access minimizes individual endpoint configuration by routing user traffic through a centralized FortiSASE connection point (such as a FortiAP or FortiGate), rather than requiring each device to be individually configured with the FortiClient agent.

NEW QUESTION # 38

A customer wants to upgrade their legacy on-premises proxy to a cloud-based proxy for a hybrid network. Which two FortiSASE features would help the customer achieve this outcome? (Choose two.)

- A. secure web gateway (SWG)
- B. sandbox cloud
- C. inline-CASB
- D. zero trust network access (ZTNA)
