**2026 Microsoft First-grade SC-100: Valid Test Microsoft Cybersecurity Architect Vce Free**

Our SC-100 training materials provide three different versions to the client and they include the PDF version, PC version, APP online version. Each version's using method and functions are different but the questions and answers of our SC-100 Study Materials is the same. The client can decide which version of our SC-100 exam questions to choose according their hobbies and their practical conditions.

## Schedule exam

**Languages:** English

**Retirement date:** none

This exam measures your ability to accomplish the following technical tasks: design a Zero Trust strategy and architecture; evaluate Governance Risk Compliance (GRC) technical strategies and security operations strategies; design security for infrastructure; and design a strategy for data and applications.

## Microsoft Cybersecurity Architect Sample Questions (Q105-Q110):

### NEW QUESTION # 105

You have an Azure subscription and an on-premises datacenter. The datacenter contains 100 servers that run Windows Server. All the servers are backed up to a Recovery Services vault by using Azure Backup and the Microsoft Azure Recovery Services (MARS) agent.

You need to design a recovery solution for ransomware attacks that encrypt the on-premises servers. The solution must follow Microsoft Security Best Practices and protect against the following risks:

- \* A compromised administrator account used to delete the backups from Azure Backup before encrypting the servers
  - \* A compromised administrator account used to disable the backups on the MARS agent before encrypting the servers
- What should you use for each risk? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

**Answer:**

Explanation:

### NEW QUESTION # 106

You need to recommend a solution to meet the compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 107

You have 10 Azure subscriptions that contain 100 role-based access control (RBAC) role assignments.

You plan to consolidate the role assignments.

You need to recommend a solution to identify which role assignments were NOT used during the last 90 days. The solution must minimize administrative effort.

What should you include in the recommendation?

- **A. Microsoft Entra Permissions Management**
- B. Microsoft Entra Privileged Identity Management (PIM)
- C. Microsoft Entra access reviews
- D. Microsoft Defender for Cloud

**Answer: A**

Explanation:

Microsoft Entra Permissions Management is designed to manage and monitor permissions across multiple cloud environments, including Azure. It provides insights into permissions, allowing you to identify unused role assignments over a specified period, like

the last 90 days.

This solution helps you track permissions, detect unused roles, and optimize role assignments across subscriptions, minimizing administrative effort by offering automated recommendations for role consolidation.

#### NEW QUESTION # 108

You need to recommend a SIEM and SOAR strategy that meets the hybrid requirements, the Microsoft Sentinel requirements, and the regulatory compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

#### NEW QUESTION # 109

You have an Azure subscription that contains multiple Azure Data Lake Storage accounts.

You need to recommend a solution to encrypt the content of the accounts by using service-side encryption and customer-managed keys. The solution must ensure that individual encryption keys are applied at the most granular level.

At which level should you recommend the encryption be applied?

- A. file
- B. folder
- C. account
- **D. container**

**Answer: D**

Explanation:

Generally available: Encryption scopes on hierarchical namespace enabled storage accounts Encryption scopes introduce the option to provision multiple encryption keys in a storage account with hierarchical namespace. Using encryption scopes, you now can provision multiple encryption keys and choose to apply the encryption scope either at the \*container\* level (as the default scope for blobs in that container) or at the blob level. The capability is available for REST, HDFS, NFSv3 and SFTP protocols in an Azure Blob / Data Lake Gen2 storage account.

The key that protects an encryption scope may be either a Microsoft-managed key or a customer- managed key in Azure Key Vault. You can choose to enable automatic rotation of a customer- managed key that protects an encryption scope. When you generate a new version of the key in your Key Vault, Azure Storage will automatically update the version of the key that is protecting the encryption scope, within a day.
