## Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q11-Q16):

### NEW QUESTION # 11

What is essential when communicating the Vision?

- A. The importance of Feature prioritization
- B. The importance of empathy interviews
- **C. The importance of Lean budget Guardrails**
- D. The importance of non-functional requirements

**Answer: C**

Explanation:

The vision is a description of the future state of the solution under development, reflecting customer and stakeholder needs, as well as the features and capabilities proposed to meet those needs<sup>1</sup>. Communicating the vision effectively is essential for creating a shared understanding of the program's goals and objectives, especially as they evolve due to changing market needs and business drivers<sup>1</sup>. One of the key aspects of communicating the vision is to establish the importance of Lean budget Guardrails, which are policies and practices that ensure the financial integrity and economic viability of the solution<sup>2</sup>. Lean budget Guardrails provide the boundaries and context for the solution development, enabling decentralized decision-making and empowering teams to operate autonomously within the agreed-upon funding<sup>2</sup>. By communicating the importance of Lean budget Guardrails, the vision helps align the teams with the strategic themes and portfolio priorities, as well as foster a culture of innovation and learning<sup>2</sup>.

### NEW QUESTION # 12

What is one characteristic of writing effective PI Objectives?

- A. Listing out committed Features
- B. Including critical Stories
- C. Identifying significant risks
- **D. Describing the value**

**Answer: D**

Explanation:

One characteristic of writing effective PI Objectives is describing the value that the objectives will deliver to the customers and stakeholders. PI Objectives are a summary of the business and technical goals that the Agile Release Train (ART) intends to achieve in the upcoming Program Increment (PI)<sup>1</sup>. They are not just a list of features or stories, but rather a statement of the outcomes and benefits that the features or stories will provide<sup>2</sup>. By describing the value, the PI Objectives help align the teams and stakeholders to a shared vision and mission, and provide a basis for measuring the progress and performance of the ART<sup>3</sup>.

### NEW QUESTION # 13

What is one purpose of the System Demo?

- **A. To demonstrate the full Solution in a production-like context**
- B. To plan the Inspect and Adapt (I and A) event
- C. To demonstrate a team's build

- D. To visualize flow, dependencies, and risks

**Answer: A**

Explanation:

The SAFe POPM workbook explains that the System Demo demonstrates progress from the full system and should be run from a staging environment that resembles production as much as possible. The PI System Demo also demonstrates the current state of the Solution to appropriate stakeholders. This aligns with demonstrating the full Solution in a production-like context, not merely a single team's build.

#### NEW QUESTION # 14

What can increase the effectiveness of Backlog Refinement?

- A. Include a few team members
- B. Refine Stories during Iteration Planning
- C. Have separate meetings with subject matter experts
- **D. Schedule the event on a regular cadence**

**Answer: D**

Explanation:

Explanation

One of the factors that can increase the effectiveness of Backlog Refinement is to schedule the event on a regular cadence. Backlog Refinement is the process of reviewing, updating, and prioritizing the backlog items to prepare them for future iterations or sprints<sup>1</sup>. By scheduling the event on a regular cadence, such as once or twice per week, the team can ensure that the backlog is always accurate, relevant, and ready for planning<sup>2</sup>. A regular cadence also helps the team to avoid cramming too much work into a single session, which can lead to lower quality and reduced collaboration<sup>3</sup>.

#### NEW QUESTION # 15

What makes value available when it 's needed?

- A. Continuous Deployment
- B. DevOps
- **C. Release on Demand**
- D. Infrastructure

**Answer: C**

Explanation:

Release on Demand is the process that makes value available to customers when it's needed. It is the final aspect of the Continuous Delivery Pipeline, which represents the workflows, activities, and automation needed to guide new functionality from ideation to an on-demand release of value<sup>1</sup>. Release on Demand allows the business to release the solution to the end users or customers in a controlled or staggered manner, based on the market and business needs<sup>2</sup>. Release on Demand enables the enterprise to respond quickly to customer feedback, optimize the timing and frequency of releases, and reduce the risk associated with each release<sup>3</sup>.
