It can almost be said that you can pass the Professional-Cloud-Developer exam only if you choose our Professional-Cloud-Developer exam braindumps. Our Professional-Cloud-Developer study materials will provide everything we can do to you. Only should you move the mouse to buy it can you enjoy our full range of thoughtful services. Having said that, why not give our Professional-Cloud-Developer Preparation materials a try instead of spending a lot of time and effort doing something that you may be not good at? Just give it to us and you will succeed easily.

Google Professional-Cloud-Developer Certification Exam is a credential offered by Google Cloud that validates a professional's expertise in designing, developing, and deploying applications on the Google Cloud Platform. Google Certified Professional - Cloud Developer certification is intended for developers who work with Google Cloud technologies and are responsible for creating cloud-native applications. Professional-Cloud-Developer exam is designed to test one's ability to use Google Cloud's tools and services to build scalable and fault-tolerant applications that meet business requirements.

Aside from the mentioned training options, Google also provides a series of programs that will allow you to demonstrate competence in the following areas:

- Serverless Firebase Development
- Building and Managing APIs with Apigee
- Deploying to Kubernetes in Google Cloud
- Serverless Cloud Run Development

Through all the above-mentioned courses, exam-takers will obtain fundamental information relating to Cloud Shell, Cloud IAM, Container Registry, Spring Boot, App Engine, Firebase SDK, and many other tools and products. It should be mentioned that these courses have a total of 64 labs that will be helpful in validating your skills to manage the Google cloud environment in real-world scenarios.

100% Pass Quiz Google - Professional Professional-Cloud-Developer Test Dumps Free

For candidates who are going to buy the Professional-Cloud-Developer training materials online, they have the concern of the safety of the website. Our Professional-Cloud-Developer training materials will offer you a clean and safe online shopping environment, since we have professional technicians to examine the website and products at times. In addition, Professional-Cloud-Developer

Training Materials have 98.75% pass rate, and you can pass the exam. We also pass guarantee and money back guarantee if you fail to pass the exam.

To become a Google Certified Professional - Cloud Developer, individuals must pass the Professional-Cloud-Developer certification exam. Google Certified Professional - Cloud Developer certification exam tests the candidate's knowledge and skills in developing, deploying, and maintaining applications on GCP. Professional-Cloud-Developer Exam covers a wide range of topics including GCP services, application deployment, security, and monitoring. Google Certified Professional - Cloud Developer certification is ideal for developers who want to demonstrate their expertise in developing cloud applications on GCP.

Google Certified Professional - Cloud Developer Sample Questions (Q377-Q382):

NEW QUESTION # 377

Your team develops services that run on Google Kubernetes Engine. Your team's code is stored in Cloud Source Repositories. You need to quickly identify bugs in the code before it is deployed to production. You want to invest in automation to improve developer feedback and make the process as efficient as possible.

What should you do?

- A. Use Spinnaker to automate deploying container images to the production environment.
- B. Use Cloud Build to automate building container images from code based on forked versions.
- C. Use Cloud Build to automate building container images from code based on Git tags.
- D. Use Spinnaker to automate building container images from code based on Git tags.

Answer: C

NEW QUESTION # 378

You are building an application that uses a distributed microservices architecture. You want to measure the performance and system resource utilization in one of the microservices written in Java. What should you do?

- A. Instrument the service with Cloud Profiler to measure CPU utilization and method-level execution times in the service.
- B. Instrument the service with OpenCensus to measure service latency, and write custom metrics to Cloud Monitoring.
- C. Instrument the service with Cloud Trace to measure request latency.
- D. Instrument the service with Debugger to investigate service errors.

Answer: A

Explanation:

<https://cloud.google.com/profiler/docs/profiling-java>

<https://cloud.google.com/appengine/docs/legacy/standard/java/microservice-performance>

NEW QUESTION # 379

You are using the latest stable version of Python 3 to develop an API that stores data in a Cloud SQL database. You need to perform CRUD operations on the production database securely and reliably with minimal effort. What should you do?

- A. 1. Use the Cloud SQL connector library for Python to connect to the Cloud SQL database through a Cloud SQL Auth Proxy.
2. Grant an IAM role to the service account that includes the `cloudsql.instances.connect` permission.
- B. 1. Use the Cloud SQL emulator to connect to the Cloud SQL database from Cloud Shell
2. Grant an IAM role to the user that includes the `cloudsql.instances.login` permission.
- C. 1. Use Cloud Composer to manage the connection to the Cloud SQL database from your Python application.
2. Grant an IAM role to the service account that includes the `composer.worker` permission.
- D. 1. Use the Cloud SQL API to connect to the Cloud SQL database from your Python application.
2. Grant an IAM role to the service account that includes the `cloudsql.instances.login` permission.

Answer: A

Explanation:

The Cloud SQL connector library for Python, along with the Cloud SQL Auth Proxy, is the recommended way to connect securely to Cloud SQL from a Python application. This method handles authentication using IAM and allows your application to securely

connect to the database without managing a password or setting up a static IP. Granting the `cloudsql.instances.connect` permission to the service account ensures that it has the necessary access to connect to the Cloud SQL instance. Using this approach provides a secure, reliable connection with minimal configuration and is preferred over options like the Cloud SQL API or Cloud Composer, which are not specifically designed for direct database connections in an application context.

NEW QUESTION # 380

You manage a microservice-based ecommerce platform on Google Cloud that sends confirmation emails to a third-party email service provider using a Cloud Function. Your company just launched a marketing campaign, and some customers are reporting that they have not received order confirmation emails. You discover that the services triggering the Cloud Function are receiving HTTP 500 errors. You need to change the way emails are handled to minimize email loss. What should you do?

- **A. Configure the sender application to publish the outgoing emails in a message to a Pub/Sub topic. Update the Cloud Function configuration to consume the Pub/Sub queue.**
- B. Increase the Cloud Function's timeout to nine minutes.
- C. Configure the sender application to retry the execution of the Cloud Function every one second if a request fails.
- D. Configure the sender application to write emails to Memorystore and then trigger the Cloud Function. When the function is triggered, it reads the email details from Memorystore and sends them to the email service.

Answer: A

Explanation:

This is a robust and scalable approach. By decoupling the email sending process using Pub/Sub, you introduce a queuing mechanism. This ensures that even if the Cloud Function encounters an issue, the email messages are not lost but remain in the queue. Additionally, Pub/Sub can handle high throughput and provides retry mechanisms.

NEW QUESTION # 381

Which of the following customer statements would alert you to a safety issue? (Choose two.)

- **A. The home button on my iPhone seems to have sunk.**
- B. The screen is too bright. It hurts my eyes.
- C. My new Apple Watch makes me itchy and my wrist is red and irritated.
- D. My iPhone has fluctuating sound levels. Sometimes it is deafening.
- **E. My iPhone flashed and sparked when I tried to charge it.**
- F. The corner of my iPad is badly bent.

Answer: A,E
